2-Wire Hybrid Indoor Monitor

User's Manual

V1.0.0

Foreword

General

This manual introduces the structure, functions, and operations of the 2-wire hybrid indoor monitor (hereinafter referred to as "the VTH"). Read carefully before using the device, and keep the manual safe for future reference.

Safety Instructions

The following signal words might appear in the manual.

Signal Words	Meaning
	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.
	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
	Indicates a potential risk which, if not avoided, could result in property damage, data loss, reductions in performance, or unpredictable results.
© <u>∽∿</u> TIPS	Provides methods to help you solve a problem or save time.
Ο ΝΟΤΕ	Provides additional information as a supplement to the text.

Privacy Protection Notice

As the device user or data controller, you might collect the personal data of others such as their face, fingerprints, and license plate number. You need to be in compliance with your local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures which include but are not limited: Providing clear and visible identification to inform people of the existence of the surveillance area and provide required contact information.

About the Manual

- The manual is for reference only. Slight differences might be found between the manual and the product.
- We are not liable for losses incurred due to operating the product in ways that are not in compliance with the manual.
- The manual will be updated according to the latest laws and regulations of related jurisdictions. For detailed information, see the paper user's manual, use our CD-ROM, scan the QR code or visit our official website. The manual is for reference only. Slight differences might be found between the electronic version and the paper version.
- All designs and software are subject to change without prior written notice. Product updates

might result in some differences appearing between the actual product and the manual. Please contact customer service for the latest program and supplementary documentation.

- There might be errors in the print or deviations in the description of the functions, operations and technical data. If there is any doubt or dispute, we reserve the right of final explanation.
- Upgrade the reader software or try other mainstream reader software if the manual (in PDF format) cannot be opened.
- All trademarks, registered trademarks and company names in the manual are properties of their respective owners.
- Please visit our website, contact the supplier or customer service if any problems occur while using the device.
- If there is any uncertainty or controversy, we reserve the right of final explanation.

Important Safeguards and Warnings

This section introduces content covering the proper handling of the device, hazard prevention, and prevention of property damage. Read carefully before using the device, and comply with the guidelines when using it.

Operation Requirements

- Check whether the power supply is correct before use.
- Do not unplug the power cord on the side of the device while the adapter is powered on.
- Operate the device within the rated range of power input and output.
- Transport, use and store the device under allowed humidity and temperature conditions.
- Do not drop or splash liquid onto the device, and make sure that there is no object filled with liquid on the device to prevent liquid from flowing into it.
- Do not disassemble the device without professional instruction.

Installation Requirements

- Do not connect the power adapter to the device while the adapter is powered on.
- Strictly comply with the local electric safety code and standards. Make sure the ambient voltage is stable and meets the power supply requirements of the device.
- Do not connect the device to two or more kinds of power supplies, to avoid damage to the device.
- Improper use of the battery might result in a fire or explosion.

\wedge

- Personnel working at heights must take all necessary measures to ensure personal safety including wearing a helmet and safety belts.
- Do not place the device in a place exposed to sunlight or near heat sources.
- Keep the device away from dampness, dust, and soot.
- Install the device on a stable surface to prevent it from falling.
- Install the device in a well-ventilated place, and do not block its ventilation.
- Use an adapter or cabinet power supply provided by the manufacturer.
- Use the power cords that are recommended for the region and conform to the rated power specifications.
- The power supply must conform to the requirements of ES1 in IEC 62368-1 standard and be no higher than PS2. Please note that the power supply requirements are subject to the device label.
- The device is a class I electrical appliance. Make sure that the power supply of the device is connected to a power socket with protective earthing.

1 Production Overview

1.1 Introduction

The 2-wire hybrid indoor monitor (VTH) uses its 2-wire system for communication. It can display videos from VTOs and HDCVI cameras, and perform video intercom calls with VTOs. It can also perform remote unlock through the DMSS app.

 \square

Power supply must be certified by our company.

1.2 Function

2-Wire Communication

Supports the 2-wire communication system.

Video and Voice Call

Make video and voice calls to other VTOs.

Monitoring

Monitors VTOs and HDCVI cameras.

Auto Snapshot

Take snapshots while you are on a call, and stores them to the SD card.

DND (Do Not Disturb)

Mutes call notifications.

Remote Unlock

Unlocks doors remotely.

Arm and Disarm

Arms and disarms devices.

Playback

Displays videos and pictures from the SD card.

Record

Displays call and alarm records.

Messages

Displays guest messages.

Wi-Fi Networking

Connects to Wi-Fi networks.

2 Network Diagram

The network diagram below displays all the networking scenarios.

Different models of the devices have different requirements.

- For H series VTH and F series VTO.
 When there are 6 devices (VTH+VTO) connected together, only a maximum of 2 devices can provide power output.
- 2. For G series VTH and S series VTO.
 - When there are no more than 4 VTHs, the maximum current output of all the 12 VDC power is 500 mA.
 - When there are more than 4 VTHs, the maximum current output of all the 12 VDC power is 300 mA.

-	\sim	-	
1	Т	- 1	1
		- 1	
-	1		

- The power supply of HDCVI camera cannot be grounded.
- The product appearance is for reference only.

Wiring 1 VTO and 1 VTH

- The two wires connected to the positive and negative terminals of OUT cannot be short-circuited.
- The line termination terminal and branch terminal are optional in this scenario.

Figure 2-1 Network diagram (without line termination terminal and branch terminal)

Figure 2-2 Network diagram (with line termination terminal and branch terminal)

Wiring 1 VTO and 2 VTHs (Cascade Connection)

Figure 2-3 Network diagram

Wiring 1 VTO and 2 VTHs (Parallel Connection)

Figure 2-4 Network diagram

Wiring 2 VTOs and 4 VTHs

 \square

The DIP number of each VTO cannot be the same. Otherwise, the connection might fail.

Figure 2-5 Network diagram

Wiring Distance Between the VTH and VTO

- It is recommended that the distance between the line termination terminal and the 2-wire controller do not exceed 3 m.
- Max distance (A) refers to the distance between the VTH and the VTO.
- Max distance (B) refers to the distance between the 2-wire controller and the VTH.

Figure 2-6 Max distance

Table 2-1 Wiring distance

RVV Cable	AWG	Max. Distance (A)	Max. Distance (B)	Max. Quantity of Terminals
$2 \times 0.5 \text{ mm}^2$	20	180 m	100 m	6
$2 \times 1.5 \text{ mm}^2$	15	180 m	100 m	6
RVVP Cable	AWG	Max. Distance (A)	Max. Distance (B)	Max. Quantity of Terminals
$2 \times 0.5 \text{ mm}^2$	20	150 m	100 m	6
	·			
Network Cable	AWG	Max. Distance (A)	Max. Distance (B)	Max. Quantity of Terminals

Telephone Wire	AWG	Max. Distance (A)	Max. Distance (B)	Max. Quantity of Terminals
Telephone Wire	24	20 m	20 m	2

Cable Insertion Loss

Insertion loss refers to the situation of sending a signal from one end of the cable and receiving the signal at the other end of the cable.

The calculation of cable insertion loss is as follows: Insertion Loss = $20 \times \text{Log}$ (signal received/signal sent)

 \square

The cable insertion loss followed is collected from the laboratory environment, and is for reference only. The actual data might differ from that collected in the test environment.

Cable Insertion Loss -10 -15 -20 ISI(dB) -25 -30 -35 -40 -45 -50 0.10 5.09 10.08 15.07 20.06 25.05 30.04 35.03 40.02 45.01 50.00 → Cat5e single pair@100m ★ Cat5e four pair@100m ★ RVV1.5@100m → RVVP0.5@50m ★ RVV0.5@100m

4 Installation and Wiring

This chapter introduces the wiring of the device.

 \wedge

- The alarm input port is connected with dry contact.
- Do not install devices in environments that have condensation, high temperatures, dust corrosive substances and direct sunlight.
- If the device behaves abnormally after you turn it on, cut off the power supply at once and unplug the network cable. Power on again after you finish resolving the issue.
- Installation should be done by professional teams. Do not disassemble or repair the device by yourself to avoid damaging the device. Contact after-sales service if you need any help.
- The recommended installation height of the device is 1.6 m from the ground.

DIP 12	0N 1 2 3 4 5 6 7 B 1 2 3 4 5 6 7 B	2048	
DIP 13		_	ON : Connect to HDCVI camera through Unshielded Twisted Pair (UTP).
DIP 13		_	OFF : Connect to the HDCVI camera through the coax cable.

Table 5-1 DIP Switch mapping relations and function

DIP Switch No.		Corresp onding Address No.	Function
DIP 14			Reserved.
DIP 15			Reserved.
DIP 16		_	ON : Set the VTH as the extension.
DIP 16		_	OFF : Set the VTH as the main VTH.

5.2 DIP Switch Coding Rules

This section introduces how to configure the address of a VTH through the coding rules of DIP switches. By setting the switches in combination, you can get any value from 1-4,094.

- Find the mapping relationship between the DIP switch number and the address number you
 plan to configure from the table.
 It follows a calculation rule that combines only the numbers listed in the Address No. to form a
 new address number.
- 2. Manually move the actuators corresponding to the DIP switches to the **ON** status, so that the address of the VTH can be configured.

For example, if you want to set your VTH address as 4, you need to first find the mapping relationship (DIP 3 equals to the address number of 4) in the table, and then manually move the actuator of DIP 3 to the **ON** status. If you want to set your VTH address as 3, you need to do the calculation (1+2=3; which equals to the value of DIP 1 and DIP 2 combined together in the mapping relationship), and manually move both the actuator of DIP 1 and DIP 2 to the **ON** status. If you want to set your VTH address as 133, you need to do a more complex calculation (128+4+1=133, which equals to the value of DIP 8, DIP 3 and DIP 1 combined together in the mapping relationship), and then manually move the actuator of DIP 8, DIP 3 and DIP 1 to the **ON** status.

Here is the list of commonly used VTH addresses (1-20) and their corresponding DIP switch number combinations.

VTH Address	DIP Switch Combination	Coding Rule
1	0N 1 2 3 4 5 6 7 8 1 2 3 4 5 6 7 8	DIP 1
2	0N 1 2 3 4 5 6 7 0 1 2 3 4 5 6 7 0	DIP 2
3	$\begin{bmatrix} 0 \\ 1 \\ 1 \\ 2 \\ 3 \\ 1 \\ 2 \\ 3 \\ 4 \\ 5 \\ 6 \\ 7 \\ 0 \\ 0 \\ 1 \\ 1 \\ 2 \\ 3 \\ 4 \\ 5 \\ 6 \\ 7 \\ 0 \\ 0 \\ 1 \\ 1 \\ 2 \\ 3 \\ 4 \\ 5 \\ 6 \\ 7 \\ 0 \\ 0 \\ 1 \\ 1 \\ 2 \\ 3 \\ 4 \\ 5 \\ 6 \\ 7 \\ 0 \\ 0 \\ 0 \\ 1 \\ 1 \\ 2 \\ 3 \\ 4 \\ 5 \\ 6 \\ 7 \\ 0 \\ 0 \\ 0 \\ 0 \\ 0 \\ 0 \\ 0 \\ 0 \\ 0$	DIP 2+ DIP 1

6.4.2 Monitoring Camera

Procedure

<u>Step 1</u> Select **Monitor** > **Camera**.

Figure 6-14 Camera

<u>Step 2</u> Tap **(**) to monitor the camera you selected.

6.5 Setting

6.5.1 Ring Settings

Set VTO ring, alarm ring and other rings.

 \square

- There is an SD card on the VTH, and users can import ring tones to the SD card.
- Ring tones must be stored in the /Ring folder at the root directory of the SD card.
- Audio files must be .pcm files (audio files of other formats cannot be played if you change their extension names).
- Audio file size must be less than 100 KB.
- Ring tone format: .pcm.
- You can only customize 10 ring tones. Other ring tones will not be displayed at the VTH.

6.5.1.1 VTO Ring

Background Information

Set a ring for the connected VTO, and support to set maximum 14 VTOs.

Procedure

<u>Step 2</u> Select **Ring** > **VTO Ring**.

- **〈** or **〉**:
- : Tap the icons to page up and down.

• + or - : Tap the icons to adjust the VTO ring volumes.

Table 6-4 Parameter description

Paramete r	Description			
Area	The number cannot be modified.			
NO/NC	Select NO (normally open) or NC (normally closed) according to detector type. It shall be the same as detector type.			
Туре	 Select corresponding type according to detector type, including IR, gas, smoke, urgency button, door, burglar alarm, perimeter and doorbell. Instant Alarm: After armed, if an alarm 			
Status	 Instant Alarm: After armed, if an alarm is triggered, the device produces siren at once and enters alarm status. Delay Alarm: After armed, if an alarm is triggered, the device enters alarm status after a specified time, during which you can disarm and cancel the alarm. Bypass: Alarm will not be triggered in the area. After disarmed, this area will restore to normal working status. Remove: The area is invalid during arm/disarm. 24 Hour: Alarm will be triggered all the time in the area regardless of arm or disarm. A zone in Remove status cannot be bypassed. 			

Paramete r	Description	
Enter Delay	After entering delay, when armed area triggers an alarm, entering armed area from non-armed area within the delay time period will not lead to linkage alarm. Linkage alarm will be produced if delay time comes to an end and it is not disarmed.	
Exit Delay	After arm, Delay Alarm area will enter arm status at the end of Exit Delay . If multiple areas set the exit delay, interface prompt will conform to maximum delay time.	Delay is only valid to the areas of Delay Alarm .

6.5.2.2 Alarm Output

After enabling alarm output, when other devices call this VTH, the alarm output device will output alarm information.

Procedure

- Step 1 Tap Setting.
- <u>Step 2</u> Select **Alarm** > **Output**.

Figure 6-19 Alarm output

6.5.3 Arm Mode Setting

Set area on/off status under different modes.

Area mode can only be set in disarm status.

Procedure

- Step 1 Tap Setting.
- Step 2 Select Mode.
 - **Home**: An arming mode that allows you to arm the system when inside the area of the alarm system.
 - Away: Arm the system when you leave the area of the alarm system.
 - **Sleep**: An alarming mode that allows you to arm the system in the sleep time.
 - **Custom**: Arm the system based on your customized needs.

Figure 6-25 Other

<u>Step 3</u> Configure parameters.

Table 6-5 Parameter description

Parameter	Description	
Monitor Time	The maximum time to monitor VTOs and HDCVI cameras.	
Record Time	The maximum time for recording videos during calls and monitoring. The system stop recording when it reaches the end of the recording time.	
	When VTO Message Time(s) is not 0:	
VTO Message Time	 If the main VTH has an SD card and the call from the VTO is not answered, the VTH will allow the caller to leave a message, saving the message to the SD card. If the VTH does not have an SD card, calls from the VTO will be automatically hung up on. When VTO Message Time(s) is 0: Regardless of the situation, calls from the VTO will be automatically hung up on. 	
VTO Call Duration	The maximum time for a call between the VTO and VTH.	
Auto Capture	 Enable for 3 snapshots to be automatically taken when the VTO calls the VTH. Tap Info > Record and Picture to view them. An SD card is needed for this function. After enabling auto capture, Answer and Delete Snapshots will be displayed. Turn it on for snapshots to be deleted automatically when the VTH answers the call. 	
Touch Sound	bund Enable touch sound to allow the screen to make a clicking sound whenever you tap it.	

6.5.5 WLAN

6.5.5.1 WLAN Configuration

Procedure

- <u>Step 1</u> On the main screen, select **Setting** > **WLAN**.
- <u>Step 2</u> Tap **WLAN** screen, and tap **to see all of the available Wi-Fi services**.

Figure 6-26 Enable Wi-Fi

Related Operations

- Format SD Card: Tap the icon to format the data stored in the SD card.
- **Eject SD Card**: Tap the icon to eject the SD card that inserted in the VTH.

6.6 Arming and Disarming

6.6.1 Arming

In case of triggering alarm after arm, produce linkage alarm and upload alarm information.

 \square

- Please ensure that the area has been added into arm mode. Otherwise, there will be no alarm triggering after arm.
- Please ensure that it is in disarmed status. Otherwise, arm will fail.

Procedure

<u>Step 1</u>

Tap (I) on the home screen to view all the arm modes.

- Home: Arm the system when inside the area of the alarm system.
- Away: Arm the system when you leave the area of the alarm system.
- **Sleep**: An alarming mode that allows you to arm the system in the sleep time.
- **Custom**: Arm the system based on your customized needs.

<u>Step 2</u> Enter arm password in the **In Mode Arm**, and then tap **OK**.

- Default password of arm is 123456. If you want to modify the password, please refer to "6.5.6.1 User Password" for details.
- If delay alarm is set in the area, the device will beep continuously at the end of exit delay time.

6.6.2 Disarming

Procedure

Step 1 In the arm mode, tap

tap 🛞

Step 2Enter the disarm password in the In Mode Disarm window, and then tap OK.Default password of disarm is 123456. Please refer to "6.5.6.1 User Password" for details.

7 DMSS App

7.1 Downloading DMSS App

You can download the DMSS App in the APP Store (iOS) or Google Play (Android) by searching for **DMSS**.

7.2 Registration and Login

For first-time use, you need to create an account. This user manual uses the operations for iOS as an example

Procedure

Step 1

Tap 🧿 to start the App.

- <u>Step 2</u> Create an account.
 - 1) On the Login screen, tap Sign up.

Figure 7-19 Scan QR code of the user you want to share

<u>Step 4</u> After scanning the QR code, the user that receives the sharing has to refresh the **Home** screen to update the sharing information. Otherwise, the shared device information would be not synchronized automatically.

Related Operations

To obtain the QR code of the user that receives the sharing

- 1. Log in to the DMSS account of the user that to receive the sharing.
- 2. Tap **Me**, and tap the QR code icon at the top of the screen.

Appendix 1 Cybersecurity Recommendations

Mandatory actions to be taken for basic equipment network security:

1. Use Strong Passwords

Please refer to the following suggestions to set passwords:

- The length should not be less than 8 characters.
- Include at least two types of characters; character types include upper and lower case letters, numbers and symbols.
- Do not contain the account name or the account name in reverse order.
- Do not use continuous characters, such as 123, abc, etc.
- Do not use overlapped characters, such as 111, aaa, etc.

2. Update Firmware and Client Software in Time

- According to the standard procedure in Tech-industry, we recommend to keep your equipment (such as NVR, DVR, IP camera, etc.) firmware up-to-date to ensure the system is equipped with the latest security patches and fixes. When the equipment is connected to the public network, it is recommended to enable the "auto-check for updates" function to obtain timely information of firmware updates released by the manufacturer.
- We suggest that you download and use the latest version of client software.

"Nice to have" recommendations to improve your equipment network security:

1. Physical Protection

We suggest that you perform physical protection to equipment, especially storage devices. For example, place the equipment in a special computer room and cabinet, and implement well-done access control permission and key management to prevent unauthorized personnel from carrying out physical contacts such as damaging hardware, unauthorized connection of removable equipment (such as USB flash disk, serial port), etc.

2. Change Passwords Regularly

We suggest that you change passwords regularly to reduce the risk of being guessed or cracked.

3. Set and Update Passwords Reset Information Timely

The device supports password reset function. Please set up related information for password reset in time, including the end user's mailbox and password protection questions. If the information changes, please modify it in time. When setting password protection questions, it is suggested not to use those that can be easily guessed.

4. Enable Account Lock

The account lock feature is enabled by default, and we recommend you to keep it on to guarantee the account security. If an attacker attempts to log in with the wrong password several times, the corresponding account and the source IP address will be locked.

5. Change Default HTTP and Other Service Ports

We suggest you to change default HTTP and other service ports into any set of numbers between 1024–65535, reducing the risk of outsiders being able to guess which ports you are using.

6. Enable HTTPS

We suggest you to enable HTTPS, so that you visit Web service through a secure communication channel.

7. MAC Address Binding

We recommend you to bind the IP and MAC address of the gateway to the equipment, thus

reducing the risk of ARP spoofing.

8. Assign Accounts and Privileges Reasonably

According to business and management requirements, reasonably add users and assign a minimum set of permissions to them.

9. Disable Unnecessary Services and Choose Secure Modes

If not needed, it is recommended to turn off some services such as SNMP, SMTP, UPnP, etc., to reduce risks.

If necessary, it is highly recommended that you use safe modes, including but not limited to the following services:

- SNMP: Choose SNMP v3, and set up strong encryption passwords and authentication passwords.
- SMTP: Choose TLS to access mailbox server.
- FTP: Choose SFTP, and set up strong passwords.
- AP hotspot: Choose WPA2-PSK encryption mode, and set up strong passwords.

10. Audio and Video Encrypted Transmission

If your audio and video data contents are very important or sensitive, we recommend that you use encrypted transmission function, to reduce the risk of audio and video data being stolen during transmission.

Reminder: encrypted transmission will cause some loss in transmission efficiency.

11. Secure Auditing

- Check online users: we suggest that you check online users regularly to see if the device is logged in without authorization.
- Check equipment log: By viewing the logs, you can know the IP addresses that were used to log in to your devices and their key operations.

12. Network Log

Due to the limited storage capacity of the equipment, the stored log is limited. If you need to save the log for a long time, it is recommended that you enable the network log function to ensure that the critical logs are synchronized to the network log server for tracing.

13. Construct a Safe Network Environment

In order to better ensure the safety of equipment and reduce potential cyber risks, we recommend:

- Disable the port mapping function of the router to avoid direct access to the intranet devices from external network.
- The network should be partitioned and isolated according to the actual network needs. If there are no communication requirements between two sub networks, it is suggested to use VLAN, network GAP and other technologies to partition the network, so as to achieve the network isolation effect.
- Establish the 802.1x access authentication system to reduce the risk of unauthorized access to private networks.
- Enable IP/MAC address filtering function to limit the range of hosts allowed to access the device.

2-Wire Hybrid Door Station

User's Manual

V1.0.0

Foreword

General

This manual introduces the structure, functions and networking of the 2-wire hybrid door station (hereinafter referred to as "the VTO"). Read carefully before using the device, and keep the manual safe for future reference.

Safety Instructions

The following signal words might appear in the manual.

Signal Words	Meaning
Anger Danger	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.
	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
	Indicates a potential risk which, if not avoided, could result in property damage, data loss, reductions in performance, or unpredictable results.
© <u>∽∿</u> TIPS	Provides methods to help you solve a problem or save time.
Ο ΝΟΤΕ	Provides additional information as a supplement to the text.

Privacy Protection Notice

As the device user or data controller, you might collect the personal data of others such as their face, fingerprints, and license plate number. You need to be in compliance with your local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures which include but are not limited: Providing clear and visible identification to inform people of the existence of the surveillance area and provide required contact information.

About the Manual

- The manual is for reference only. Slight differences might be found between the manual and the product.
- We are not liable for losses incurred due to operating the product in ways that are not in compliance with the manual.
- The manual will be updated according to the latest laws and regulations of related jurisdictions. For detailed information, see the paper user's manual, use our CD-ROM, scan the QR code or visit our official website. The manual is for reference only. Slight differences might be found between the electronic version and the paper version.
- All designs and software are subject to change without prior written notice. Product updates

might result in some differences appearing between the actual product and the manual. Please contact customer service for the latest program and supplementary documentation.

- There might be errors in the print or deviations in the description of the functions, operations and technical data. If there is any doubt or dispute, we reserve the right of final explanation.
- Upgrade the reader software or try other mainstream reader software if the manual (in PDF format) cannot be opened.
- All trademarks, registered trademarks and company names in the manual are properties of their respective owners.
- Please visit our website, contact the supplier or customer service if any problems occur while using the device.
- If there is any uncertainty or controversy, we reserve the right of final explanation.

Important Safeguards and Warnings

This section introduces content covering the proper handling of the device, hazard prevention, and prevention of property damage. Read carefully before using the device, and comply with the guidelines when using it.

Operation Requirements

- Check whether the power supply is correct before use.
- Do not unplug the power cord on the side of the device while the adapter is powered on.
- Operate the device within the rated range of power input and output.
- Transport, use and store the device under allowed humidity and temperature conditions.
- If the device is powered off for longer than a month, it should be placed in its original package and sealed. Make sure to keep it away from moisture, and store it under allowed humidity and temperature conditions.
- Do not drop or splash liquid onto the device, and make sure that there is no object filled with liquid on the device to prevent liquid from flowing into it.
- Do not disassemble the device without professional instruction.

Installation Requirements

- Do not connect the power adapter to the device while the adapter is powered on.
- Strictly comply with the local electric safety code and standards. Make sure the ambient voltage is stable and meets the power supply requirements of the device.
- Do not connect the device to two or more kinds of power supplies, to avoid damage to the device.
- Improper use of the battery might result in a fire or explosion.

- Personnel working at heights must take all necessary measures to ensure personal safety including wearing a helmet and safety belts.
- Do not place the device in a place exposed to sunlight or near heat sources.
- Keep the device away from dampness, dust, and soot.
- Install the device on a stable surface to prevent it from falling.
- Install the device in a well-ventilated place, and do not block its ventilation.
- Use an adapter or cabinet power supply provided by the manufacturer.
- Use the power cords that are recommended for the region and conform to the rated power specifications.
- The power supply must conform to the requirements of ES1 in IEC 62368-1 standard and be no higher than PS2. Please note that the power supply requirements are subject to the device label.
- The device is a class I electrical appliance. Make sure that the power supply of the device is connected to a power socket with protective earthing.

7 Software Functions

1 Product Overview

1.1 Introduction

The 2-wire hybrid VTO uses the metal front panel and supports featured nameplate. Using two wires for communication, the VTO supports video intercom with 2-wire hybrid VTH, and supports local lock and external 485 lock; it also supports call alarm and message notification on DMSS app.

 \square

We recommend using the power supply provided with the device in the package. If you solely purchased the device without its power supply, then please make sure that the power supply you intend to use was certified by our company.

1.2 Function

2-wire Communication

Supports 2-wire communication.

Video/Voice Call

Make video or voice call to VTHs.

Monitoring

Videos can be monitored by VTH or DMSS app users.

Auto IR Illumination

Supports auto IR illumination at night.

Unlock

Swipe the cards or use the password to open the door.

 \square

Card and password function are available on select models.

Keypad with Braille

The device has the keypad with braille.

 \square

Keypad with braille is available on select models.

2 Network Diagram

The network diagrams below display all the networking scenarios.

Different models of the devices have different requirements.

- For H series VTH and F series VTO.
 When there are 6 devices (VTH+VTO) connected together, only a maximum of 2 devices can provide power output.
- 2. For G series VTH and S series VTO.
 - When there are no more than 4 VTHs, the maximum current output of all the 12 VDC power is 500 mA.
 - When there are more than 4 VTHs, the maximum current output of all the 12 VDC power is 300 mA.

-	\sim	-	
1	Т	- 1	1
		- 1	
-	1		

- The power supply of HDCVI camera cannot be grounded.
- The product appearance is for reference only.

Wiring 1 VTO and 1 VTH

- The two wires connected to the positive and negative terminals of OUT cannot be short-circuited.
- The line termination terminal and branch terminal are optional in this scenario.

Figure 2-1 Network diagram (without line termination terminal and branch terminal)

Figure 2-2 Network diagram (with line termination terminal and branch terminal)

Wiring 1 VTO and 2 VTHs (Cascade Connection)

Figure 2-3 Network diagram

Wiring 1 VTO and 2 VTHs (Parallel Connection)

Figure 2-4 Network diagram

Wiring 2 VTOs and 4 VTHs

 \square

The DIP number of each VTO cannot be the same. Otherwise, the connection might fail.

Figure 2-5 Network diagram

Wiring Distance Between the VTH and VTO

 \square

- It is recommended that the distance between the line termination terminal and the 2-wire controller do not exceed 3 m.
- Max distance (A) refers to the distance between the VTH and the VTO.
- Max distance (B) refers to the distance between the 2-wire controller and the VTH.

Figure 2-6 Max distance

Table 2-1 Wiring distance

RVV Cable	AWG	Max. Distance (A)	Max. Distance (B)	Max. Quantity of Terminals
$2 \times 0.5 \text{ mm}^2$	20	180 m	100 m	б
$2 \times 1.5 \text{ mm}^2$	15	180 m	100 m	б
RVVP Cable	AWG	Max. Distance (A)	Max. Distance (B)	Max. Quantity of Terminals

Cat5e Single Pair	24	100 m	50 m	4
Multi Pair Cable	24	200 m	100 m	6
Telephone Wire	AWG	Max. Distance (A)	Max. Distance (B)	Max. Quantity of Terminals
Telephone Wire	24	20 m	20 m	2

Cable Insertion Loss

Insertion loss refers to the situation of sending a signal from one end of the cable and receiving the signal at the other end of the cable.

The calculation of cable insertion loss is as follows: Insertion Loss = $20 \times \text{Log}$ (signal received/signal sent)

 \square

The cable insertion loss followed is collected from the laboratory environment, and is for reference only. The actual data might differ from that collected in the test environment.

Cable Insertion Loss -10 -15 -20 ISI(dB) -25 -30 -35 -40 -45 -50 0.10 5.09 10.08 15.07 20.06 25.05 30.04 35.03 40.02 45.01 50.00 → Cat5e single pair@100m ★ Cat5e four pair@100m ★ RVV1.5@100m → RVVP0.5@50m ★ RVV0.5@100m

Figure 2-7 Cable insertion loss

3 Installation

- Do not expose the VTO to condensation, high temperature, direct sunlight, stain, dust, and chemically corrosive substances.
- Installation should be done by professional teams. Do not dismantle or repair the VTO by yourself in case of device failure. Contact after-sales service if you need any help.
- Prepare cross screwdrivers and gloves yourself.
- The recommended installation height of the VTO should be no more than 2 m from the ground.

The alarm input port is connected as dry contact.

Figure 5-1 Wiring

6 Basic DIP Configuration

Configure the DIP switches to achieve the function you would like to program, which includes:

- Configure the address of the VTO.
- Configure the connection mode.

6.1 DIP Switch Introduction

On the Dip-switch, set the code corresponding to the function you want to program as shown in the table below.

DIP Switch No.		Corresponding Function	Description	
DIP 1	ON Image: Ima	VTO Address 1		
DIP 2	ON 1 2 3 4 5 6 7 8	VTO Address 2	Address DIP configuration. Supports programing a	
DIP 3	ON Image: Constraint of the constrain	VTO Address 4	maximum of 14 VTO addresses.	
DIP 4	ON 1 2 3 4 5 6 7 8	VTO Address 8		
DIP 5	ON 1 2 3 4 5 6 7 8	Lock-release activation time: 2 Sec		
נ יוע	ON ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓	Lock-release activation time: 4 Sec	Lock-release activation time	
DIP 6	ON ↑ □ <th>lock-release activation time: 6 Sec</th> <th></th>	lock-release activation time: 6 Sec		

Table 6-1 DIP Switch mapping relations and function

DIP Switch No.		Corresponding Function	Description
	ON ↓ <th>Lock-release activation time: 8 Sec</th> <th></th>	Lock-release activation time: 8 Sec	
DIP 7	$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$	ON: NTSC Mainly used in the U.S., Canada and Japan. OFF: PAL Mainly used in	Television signal coding system
	1 2 3 4 5 6 7 8	Germany, Britain, China and Spain.	
DIP 8	ON 1 2 3 4 5 6 7 8	ON : LED lighting of nameplate panel turned on.	LED lighting of nameplate panel
	ON Image: Constraint of the constraint	OFF : LED lighting of nameplate panel turned off.	

6.2 Configuring VTO Address

This section introduces how to configure the address of a VTO through the coding rules of DIP switches.

Procedure

<u>Step 1</u> Find the mapping relation between the DIP switch number and the address number you plan to configure from the table.
 It follows a calculation rule that combing only the numbers listed in the **Address No.** only

to form a new address number.

<u>Step 2</u> Manually move the actuator(s) corresponding to the DIP switch(s) to the status **ON**, so that the address of the VTO can be configured.

For example, if you want to set your VTO address as 4, you need to first find the mapping relation (DIP 3 equals to the address number of 4) in the table, and then manually move the actuator of the DIP 3 to the status **ON**. If you want to set your VTO address as 3, you need to do the calculation (1+2=3; which equals to the value of DIP1 and DIP 2 combined together in the mapping relation), and manually move both the actuator of DIP 1 and DIP 2 to the status **ON**.

Here is the list of commonly used VTO addresses (1-14) and their corresponding DIP switch number combinations.

VTO Address	DIP Switch Combination	Coding Rule
1	ON 1 2 3 4 5 6 7 8	DIP 1
2	ON Image: Ima	DIP 2
3	ON 1 2 3 4 5 6 7 8	DIP 2+ DIP 1
4	ON Image: Ima	DIP 3
5	ON Image: Constraint of the state of the s	DIP 3 + DIP 1
6	ON Image: Ima	DIP 2 + DIP 3
7	ON Image: Second s	DIP 3 + DIP 2 + DIP 1
8	ON 1 2 3 4 5 6 7 8	DIP 4
9	ON ↓ <td>DIP 4 + DIP 1</td>	DIP 4 + DIP 1
10	ON Image: Ima	DIP 4 + DIP 2

Table 6-2 Common VTO Address (1-14) and DIP switch numbers

VTO Address	DIP Switch Combination	Coding Rule
11	ON Image: Constrained and the constrain	DIP 4 + DIP 2+ DIP 1
12	ON Image: Constraint of the constraint	DIP 4 + DIP 3
13	ON Image: Constraint of the constrain	DIP 4 + DIP 3+ DIP 1
14	$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$	DIP 4 + DIP 3+ DIP 2

7 Software Functions

Only the S series door station supports the software functions.

- Press * to enter the setting mode. 3 indicators turn red.
- If the configurations succeed, the indicator light turns blue for 2 seconds and turns off.
- If the configurations fail, the indicator turns off and the device beeps.

\square

You can add up to 100 different opening passwords and 100 different cards. If you add more than 100 passwords or cards, the device beeps.

Configuring admin password

For first-time use, press ***0*admin password*** to configure the admin password.

- The password must consist of 4 to 6 numbers.
- When the admin password is configured successfully, if you press ***0*admin password*** to configure a new password, the device beeps. The configuration is invalid.

Modifying admin password

Press ***0*original admin password*new admin password*** to modify the admin password. For example, the original password is 880088, and the new password is 008800. Press ***0*880088*008800***.

Adding the card

Press ***1*admin password***, swipe the card, and then press*.

 \square

If you have not configured the admin password, after pressing ***1**, the device beeps and exits the setting mode.

Deleting the card

Press ***2*admin password*** to clear the card information.

\square

If you have not configured the admin password, after pressing ***2**, the device beeps and exits the setting mode.

Adding the opening password

The password is used to open the door.

- 1. Press ***3*admin password*opening password*** to add a new opening password.
- 2. Press **#opening password#** to open the door.

 \square

- The password must consist of 4 to 6 number.
- If you have not configured the admin password, after pressing ***3**, the device beeps and exits the setting mode.

Deleting the opening password

Press ***4*admin password*** to clear the opening password.

 \square

If you have not configured the admin password, after pressing ***4**, the device beeps and exits the setting mode.

2-Wire Controller

User's Manual

Foreword

General

This manual introduces the installation, functions and operations of the 2-wire controller device (hereinafter referred to as "the Controller"). Read carefully before using the device, and keep the manual safe for future reference.

Models

VTNC1003C

Safety Instructions

The following signal words might appear in the manual.

Signal Words	Meaning
Anger Danger	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.
	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
	Indicates a potential risk which, if not avoided, could result in property damage, data loss, reductions in performance, or unpredictable results.
© <u>∽∿</u> TIPS	Provides methods to help you solve a problem or save time.
	Provides additional information as a supplement to the text.

Privacy Protection Notice

As the device user or data controller, you might collect the personal data of others such as their face, fingerprints, and license plate number. You need to be in compliance with your local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures which include but are not limited: Providing clear and visible identification to inform people of the existence of the surveillance area and provide required contact information.

Interface Declaration

This manual mainly introduces the relevant functions of the device. The interfaces used in its manufacture, the procedures for returning the device to the factory for inspection and for locating

I

its faults are not described in this manual. Please contact technical support if you need information on these interfaces.

About the Manual

- The manual is for reference only. Slight differences might be found between the manual and the product.
- We are not liable for losses incurred due to operating the product in ways that are not in compliance with the manual.
- The manual will be updated according to the latest laws and regulations of related jurisdictions. For detailed information, see the paper user's manual, use our CD-ROM, scan the QR code or visit our official website. The manual is for reference only. Slight differences might be found between the electronic version and the paper version.
- All designs and software are subject to change without prior written notice. Product updates might result in some differences appearing between the actual product and the manual. Please contact customer service for the latest program and supplementary documentation.
- There might be errors in the print or deviations in the description of the functions, operations and technical data. If there is any doubt or dispute, we reserve the right of final explanation.
- Upgrade the reader software or try other mainstream reader software if the manual (in PDF format) cannot be opened.
- All trademarks, registered trademarks and company names in the manual are properties of their respective owners.
- Please visit our website, contact the supplier or customer service if any problems occur while using the device.
- If there is any uncertainty or controversy, we reserve the right of final explanation.

Important Safeguards and Warning

This section introduces content covering the proper handling of the device, hazard prevention, and prevention of property damage. Read carefully before using the device, and comply with the guidelines when using it.

Operation Requirements

 \wedge

- Check whether the power supply is correct before use.
- Do not unplug the power cord on the side of the device while the adapter is powered on.
- Operate the device within the rated range of power input and output.
- Transport, use and store the device under allowed humidity and temperature conditions.
- Do not drop or splash liquid onto the device, and make sure that there is no object filled with liquid on the device to prevent liquid from flowing into it.
- Do not disassemble the device without professional instruction.

Installation Requirements

- Do not connect the power adapter to the device while the adapter is powered on.
- Strictly comply with the local electric safety code and standards. Make sure the ambient voltage is stable and meets the power supply requirements of the device.
- Do not connect the device to two or more kinds of power supplies, to avoid damage to the device.
- Improper use of the battery might result in a fire or explosion.

- Personnel working at heights must take all necessary measures to ensure personal safety including wearing a helmet and safety belts.
- Do not place the device in a place exposed to sunlight or near heat sources.
- Keep the device away from dampness, dust, and soot.
- Install the device on a stable surface to prevent it from falling.
- Install the device in a well-ventilated place, and do not block its ventilation.
- Use an adapter or cabinet power supply provided by the manufacturer.
- Use the power cords that are recommended for the region and conform to the rated power specifications.
- The power supply must conform to the requirements of ES1 in IEC 62368-1 standard and be no higher than PS2. Please note that the power supply requirements are subject to the device label.
- The device is a class I electrical appliance. Make sure that the power supply of the device is connected to a power socket with protective earthing.
