# Network Speed Dome & PTZ Camera User's Manual

Web 3.0

# Foreword

### General

The manual introduces the functions and operations of the web interface of the network speed dome and PTZ camera (hereinafter referred to as "the Device").

#### Safety Instructions

The following categorized signal words with defined meaning might appear in the manual.

Signal Words	Meaning
	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.
	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
	Indicates a potential risk which, if not avoided, could result in property damage, data loss, lower performance, or unpredictable result.
©—™ TIPS	Provides methods to help you solve a problem or save you time.
	Provides additional information as the emphasis and supplement to the text.

V1.0.0	First release.	May 2018

#### About the Manual

- The manual is for reference only. If there is inconsistency between the manual and the actual product, the actual product shall prevail.
- We are not liable for any loss caused by the operations that do not comply with the manual.
- The manual would be updated according to the latest laws and regulations of related regions. For detailed information, see the paper manual, CD-ROM, QR code or our official website. If there is inconsistency between paper manual and the electronic version, the electronic version shall prevail.

- All the designs and software are subject to change without prior written notice. The product updates might cause some differences between the actual product and the manual. Please contact the customer service for the latest program and supplementary documentation.
- There still might be deviation in technical data, functions and operations description, or errors in print. If there is any doubt or dispute, please refer to our final explanation.
- Upgrade the reader software or try other mainstream reader software if the manual (in PDF format) cannot be opened.
- All trademarks, registered trademarks and the company names in the manual are the properties of their respective owners.
- Please visit our website, contact the supplier or customer service if there is any problem occurred when using the device.
- If there is any uncertainty or controversy, please refer to our final explanation.

# **Important Safeguards and Warnings**

The manual will help you to use the Device properly. Read the manual carefully before using the Device, and keep it well for future reference.

### **Operation Requirements**

- Avoid heavy stress, violent vibration, and water splash during transportation, storage, and installation. Complete package is necessary during the transportation. We assume no responsibility for any damage or problem caused by the incomplete package during the transportation.
- To avoid damage, protect the Device from falling down and heavy vibration. Arrange more than one person to move the Device when necessary.
- Buckle the safety hook before installing the Device if it is included.
- Keep the Device away from devices that generate electromagnetic field like televisions, radio transmitters, electromagnetic devices, electric machine, transformers, and speakers; otherwise image quality will be influenced.
- Keep the Device away from smoke, vapor, heat, and dust.
- Do not install the Device near heating furnace, spotlight, and other heat sources. If it is installed on ceiling, in kitchen or near boiler room, the Device temperature might rise.
- Do not dissemble the Device; otherwise it might cause dangers or device damage. Contact your local retailer or customer service center for internal setup or maintenance requirement.
- Make sure that there is no metal, or inflammable, explosive substance in the Device; otherwise it might cause fire, short-circuit, or other damage. Power off the Device and disconnect the power cord immediately if there is water or liquid falling into the Device. And contact your local retailer or customer service center. Avoid sea water or rain eroding the Device.
- Avoid aiming the lens at intense light source, including sunlight, and incandescent light; otherwise the lens might be damaged.
- Clean the enclosure with soft cloth. To remove the dirt, you can dip the soft cloth in proper detergent, wring the soft cloth out, and then dry the enclosure with soft cloth. Do not use gasoline, paint thinner, or other chemicals to clean the enclosure; otherwise it might result in enclosure transfiguration or paint flake. Read all the manuals included before using chemical cloth. Avoid long time touch between the plastic or rubber material and the enclosure; otherwise it might result in device damage and paint flake.
- It is recommended to use the Device with a lightning-proof device for better lightning-proof effect.

### Requirements for Installation and Maintenance Personnel

- Have certificates or experiences related to installation and maintenance of the closed-circuit television (CCTV), and have certificates related to working at height.
- Have basic knowledge and installation skills of CCTV system.
- Have basic knowledge and operation technique for low-voltage wiring and low-voltage electronic circuit connection.
- Have the ability to read and understand the manual.

#### Requirements for Lifting the Device

- Use secure lifting appliances suitable for the installation place and the product installation mode.
- Make sure that the selected tools reach the installation height and have high safety performance.

- All installation and operations shall conform to local electrical safety regulations.
- The power source shall conform to the requirements of the Safety Extra Low Voltage (SELV) standard, and supply power with rated voltage which conforms to Limited Power Source requirement according to IEC60950-1. Note that the power supply requirement is subject to the device label.
- Use the power adapter recommended by the manufacturer.
- For the Device that supports laser, do not aim the laser directly at eyes. And keep a proper distance from the flammable to avoid fire.
- Do not connect several devices to one power adapter; otherwise it might result in overheat or fire if it exceeds the rated load.
- Make sure that the power is off when you connect the cables, install or uninstall the Device.
- Power off the Device and disconnect the power cord immediately if there is any smoke, disgusting smell, or noise from the Device. And contact your local retailer or customer service center.
- Contact your local retailer or customer service center if the Device is abnormal. Do not disassemble or repair the Device by yourself. We assume no responsibility for any problems caused by unauthorized modifications, disassembly or repair, incorrect installation or use, and overuse of certain components.

# **1** Network Configuration

# **1.1 Network Connection**

To view the web interface on your PC, connect the Device to the PC first. There are mainly two connection modes between the Device and PC. See Figure 1-1 and Figure 1-2. Figure 1-1 Direct connection by using a network cable

The models presented in the figures are for reference only, and the actual product shall prevail. All devices have the same IP address (192.168.1.108 by default) when they are delivered out of factory. To make the device get access to network smoothly, plan available IP segment reasonably according to practical network environment.

# 1.2 Logging in to the Web Interface

## 1.2.1 Device Initialization

For first-time use or after you have restored the Device to defaults, you need to initialize the Device by performing the following steps.

<u>Step 1</u> Open the browser, enter the IP address of the Device in the address bar, and then press the Enter key.

# The **Country/Region Setting** interface is displayed. Set the **Country/Region**, **Language** and **Video Standard** as needed. See Figure 1-3.

Figure 1-3 Country/region setting interface

Country/Region Setting		
Country/Region	Australia	•
Language	English	
Video Standard	PAL	
		Save

<u>Step 2</u> Click **Save**, and the **Time Zone Setting** interface is displayed. Configure time parameters. See Figure 1-4.

Figure 1-4 Time zone setting interface

e Zone Setting		
Date Format	YYYY-MM-DD	
Time Zone	(UTC+04:30) Kabul	
Current Time	2019-02-27 📰 13 : 51 : 36 Sync PC	
It will be modified as	2019-02-27 10:21:36	
	Next	

#### Step 3 Click Next.

The **Device Initialization** interface is displayed. For the interface, see Figure 1-5. For the parameter description, see Table 1-1.

Device Initialization	
Username	admin
Password	•••••
	Strong
Confirm Password	•••••
	Use a password that has 8 to 32 characters, it can be a combination of letter(s),
	number(s) and symbol(s) with at least two kinds of them.(please do not use special
	symbols like ' " ; : & )
Email Address	To reset password, please input properly or update in time.
	Save

Parameter	Description
Username	It is admin by default.
Password	The password should consist of 8 to 32 non-blank characters and contain at least two types of characters among upper case, lower case, number, and special characters (excluding ' "; : &). Set a high security password according to the prompt of password strength. Make sure that the new password is the same as the confirming password.
Confirm Password	Enter the confirming password that shall be the same as the password you entered.
Email Address	Set the email address which is used to reset password.

Table 1-1 Device initialization parameter description

Step 4 Click Save.

The **P2P** interface is displayed. See Figure 1-6.

## 1.2.2 First-time Login

You need to download and install the plug-in for the first-time login.

<u>Step 1</u> Open the browser, enter the IP address of the Device in the address bar, and then press the Enter key.

#### <u>Step 2</u> Enter the username and password, and then click Login.

The web interface is displayed.

 $\square$ 

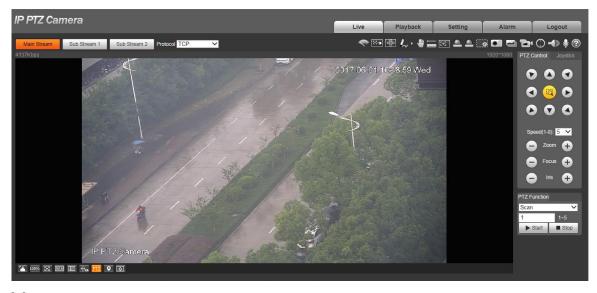

- If you enter the wrong password for 5 times, the account will be locked for 5 minutes. After the locked time, you can log in to the web interface again.
- You can set the number of allowed password attempts and locked time in "5.4.11.3 Illegal Access."
- <u>Step 3</u> Download and install the plug-in according to the on-screen instruction after logging in to the web interface. See Figure 1-9.

Step 2 Enter the username and password, and then click Login.

The web interface is displayed, and the video is displayed in **Live** interface.

- If you enter the wrong password for 5 times, the account will be locked for 5 minutes. After the locked time, you can log in to the web interface again.
- You can set the number of allowed password attempts and locked time. For details, see "5.4.11.3 Illegal Access."

## 1.2.4 Resetting Password

If you forget the password of the admin user, you can set the password through the provided email address.

Before resetting the password, you need to provide the email address in advance. For details,

see "1.2.1 Device Initialization" or "5.6.3.2 System Service."

<u>Step 1</u> Open the browser, enter the IP address of the Device in the address bar, and then press the Enter key.

The Login interface is displayed. See Figure 1-12.

4	Video window functions
5	PTZ configuration
6	PTZ status

#### Table 2-1 Function bars description

# 2.1 Encoding Setting

#### 

Some devices do not support two sub streams.

For the encoding setting area, See Figure 2-2. For the parameter description, see Table 2-2. Figure 2-2 Encoding setting

	Main Stream	Sub Stream 1	Sub Stream 2	Protocol TCP	~
--	-------------	--------------	--------------	--------------	---

Parameter	Description
Main Stream	It has large bit stream value and image with high resolution, but requires large bandwidth. This option can be used for storage and monitoring.
Sub Stream 1	It has small bit stream value and smooth image, and requires little bandwidth. This option is normally used to replace main stream when bandwidth is not enough.
Sub Stream 2	It has small bit stream value and smooth image, and requires little bandwidth. This option is normally used to replace main stream when bandwidth is not enough.
Protocol	Select a protocol for video monitoring. The supported protocols include <b>TCP</b> (Transmission Control Protocol), <b>UDP</b> (User Datagram Protocol), and <b>Multicast</b> .

Table 2-2 Encoding setting parameter description

# 2.2 Video Window Adjustment

For the video window adjustment bar, See Figure 2-3. For parameter description, see Table 2-3.

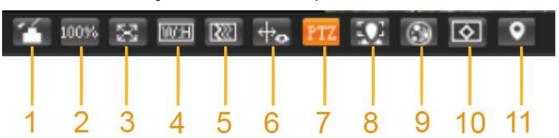

Figure 2-3 Video window adjustment

Table 2-3 Video window adjustment parameter description

No.	Parameter	Description
1	Image Adjustment	Click this button, and the <b>Image Adjustment</b> interface is displayed on the right side of the <b>Live</b> interface. You can adjust parameters such as brightness, contrast, hue, and saturation on the interface.
2	Original Size	Adjust the video image to original size.
3	Full Screen	Click this button, and the video is displayed in full screen. To exit full screen, double-click the screen or press the Esc button.
4	W:H	Adjust the video image to original ratio or a proper window.
5	Fluency	Click this button, and you can select <b>Realtime</b> , <b>General</b> , or <b>Fluent</b> . <b>General</b> is selected by default.
6	Rules Info	Click this button, and smart rules are displayed on the <b>Live</b> interface after the function is enabled. The function is

No.	Parameter	Description
		enabled by default.
7	PTZ	Click this button, and <b>PTZ</b> configurations are displayed on the <b>Live</b> interface after the function is enabled.
8	Face	Click this button, and face pictures are displayed on the screen. See Figure 2-8.
9	Video Metadata	Click this button, and information about motor vehicles, non-motor vehicles, and people is displayed on the screen in real time. See Figure 2-11.
10	Anti-aliasing	Click this button to enable anti-aliasing, and then aliasing can be avoided when video windows are small.
11	Panorama	Click this button, and a panorama window is displayed on the <b>Live</b> interface. You can perform operations such as positioning, calling presets, and setting tours.

## Image Adjustment

For **Image Adjustment** interface, see Figure 2-4. For parameter description, see Table 2-4. Figure 2-4 Image Adjustment

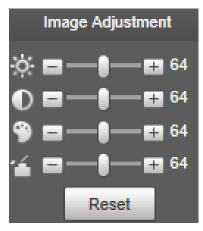

Table 2-4 Image adjustment parameter description

Parameter	Description
	Adjust the image brightness.
$\bullet$	Adjust the image contrast.
9	Adjust the image hue.
1	Adjust the image saturation.
Reset	Restore brightness, contrast, saturation and hue to default values.

 $\square$ 

Only brightness, contrast, hue, and saturation of live view image on the web interface can be adjusted with this function. To adjust the brightness, contrast, hue, and saturation of the Device, you can go to Setting > Camera > Conditions.

#### Panorama

For the Panorama interface, see Figure 2-5.

Figure 2-5 Panorama interface

- You can perform positioning in this window by drawing a box with the left mouse button. The located area is displayed on the Live interface and enlarged.
- After you click **Refresh**, the Device rotates from 0 to 360 degrees horizontally and from 6 to 65 degrees vertically to obtain a new panoramic image.
- You can adjust the size of the panoramic image by dragging the screen ratio bar

You can click to call a corresponding preset on the right side of the window. For the interface, see Figure 2-6. For how to set a preset, see "5.3.2.1 Preset."

Figure 2-6 Preset

Tour You can click to call a corresponding tour on the right side of the window. For the interface, see Figure 2-7. For how to set a tour, see "5.3.2.2 Tour."

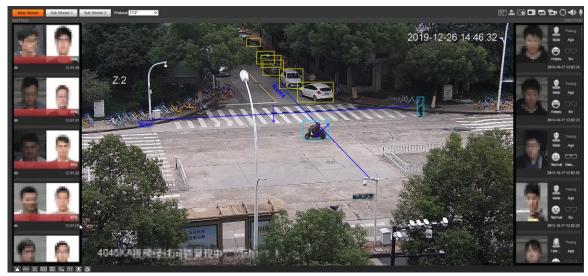

#### Figure 2-7 Tour

### Face

For the **Face** interface, see Figure 2-8. Face recognition result is displayed on the left side, and the captured face picture and attributes are displayed on the right side.

Figure 2-8 Face

• Face recognition result display area: Displays the captured small face pictures, the corresponding face pictures in the database, and the similarities between them. After you click the picture, the attributes and details are displayed. See Figure 2-9.

# 2.5 PTZ Configuration

You can control PTZ by using the **PTZ Control** panel or joystick. You can also set preset, scanning, and other functions in the **PTZ Function** area.

### PTZ Control

### 

Before using the **PTZ Control** panel, you need to set the PTZ protocol by selecting **Setting > PTZ > Protocol**.

For **PTZ Control** panel, See Figure 2-17. For parameter description, see Table 2-6.

Figure 2-17 PTZ control

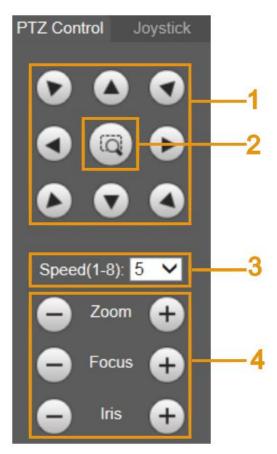

Table 2-6 PTZ control parameter description

No.	Parameter	Description
1	Direction buttons	There are 8 directions: Up, down, left, right, upper left, upper
I	Direction buttons	right, lower left, and lower right.
		Provides quick positioning function. Draw an box in the live
2	Position	view with the mouse, and then the PTZ rotates to and
		focuses on the selected area rapidly.
2	Speed	The changing speed of PTZ direction. The higher the value,
3	Speed	the faster the speed.
4	Zoom/Focus/Iris	Click to increase the value, and click to decrease the value.

### Joystick

You can drag the middle button to simulate joystick operations to control device rotation. For the operation interface, see Figure 2-18. Speed, zoom, focus, and iris configurations are the same as that of **PTZ Control** panel.

Figure 2-18 Joystick

### **PTZ** Functions

The PTZ supports multiple functions. Select a function, click Start or Goto to start using the function, and then click stop to stop using the function. For the configuration interface, see Figure 2-19. For the supported functions and settings, see Table 2-7. Figure 2-19 PTZ function

Table 2-7 PTZ functions description

Parameter	Description	
Scan	Select <b>Scan</b> from the list, enter a scan number, and then click <b>Start</b> . The PTZ starts scanning, and the default number is 1.	
Preset	Select <b>Preset</b> from the list, enter a preset number, and then click <b>Go to</b> . The PTZ will rotate to the preset position.	
Tour	Select <b>Tour</b> from the list, enter a tour number, and then click <b>Start</b> . The PTZ starts to tour.	

Parameter	Description	
Pattern	Select <b>Pattern</b> from the list, enter a pattern number, and then click <b>Start</b> . The PTZ starts to pattern.	
Assistant	Reserved for special requirements.	
Pan	Select <b>Pan</b> from the list, and then click <b>Start</b> . The PTZ starts to pan.	
Go to	<ul> <li>Select Go to from the list, enter horizontal angle value, vertical angle value and zoom, and then click Go to. The Device will turn to the position you want.</li> <li>One unit of the horizontal angle value or vertical angle value you enter equals 0.1 degree.</li> </ul>	

#### Menu

For the menu interface, see Figure 2-20. For the parameter description, see Table 2-8. Figure 2-20 Menu interface

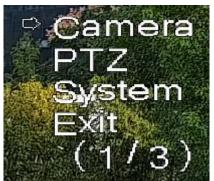

#### Table 2-8 Menu parameter description

Parameter	Description	
Direction buttons	Click the up and down buttons to select parameters, and click the left and right buttons to select parameter values.	
ОК	Confirmation button.	
Open	Open the OSD menu.	
Close	Close the OSD menu.	

Click **Open** to open the OSD menu. The OSD menu is displayed on the live view. See Figure 2-21.

Figure 2-21 OSD menu

You can finish the following settings through the menu:

- Camera settings: See "5.1 Camera."
- PTZ settings: See "5.3 PTZ Settings."
- System management: See "5.6 System Management."

You can change the location of the OSD menu in "5.1.2.3 Overlay."

## 2.6 PTZ Status

On the **Live** interface, the PTZ status is displayed at the lower right corner. See Figure 2-22.

The function is available on select models.

When the PTZ lifespan is close to the threshold, the warning will be displayed on the **Live** interface. See Figure 2-23 and Figure 2-24.

Figure 2-24 Warning (2)

# 3 AI Live

You can check the information of the detected human faces, human bodies, motor vehicles, and non-motor vehicles.

This function is available on select models.

## 3.1 AI Live Interface

For the **Al Live** interface, see Figure 3-1. For the layout description, see Table 3-1. Figure 3-1 Al live interface

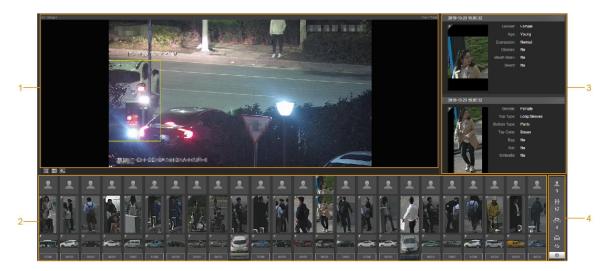

Table 3-1 AI live interface description

No.	Function	
1	Live view	
2	Snapshot display area	
3	Information display area of detected targets	
4	Statistics area of the detected targets	

## **3.1.2 Information Display Area of Detected Targets**

Display the information of the captured targets in real time. See Figure 3-2.

2019-10-29 15:05:32 Female Young Age: Normal Expression: Glasses: No Mouth Mask: No Beard: No 2019-10-29 15:05:32 Gender: Female Long Sleeves Top Type: Pants Bottom Type: Top Color: Brown Bag: No No Umbrella: No

Figure 3-2 Information display of the detected targets

## 3.1.3 Snapshot Display Area

Display the snapshots of the detected targets. See Figure 3-3. Click any snapshot to view the information of the detected target in information display area.

Figure 3-3 Snapshot display area

## 3.1.4 Statistics Area of the Detected Targets

Display the number of the captured target in real time. See Figure 3-4.

Figure 3-4 Statistics area of the detected targets

#### Table 3-2 Statistics area description of the detected targets

lcon	Detected Target	Description
•	Face	Available detection items: Gender, age, expression,
		glasses, mouth mask, and beard.
ŤŤ	Human	Available detection items: Top, bottom, top color, bottom
	Human	color, bag, hat, and umbrella.
56	Non-motor vehicle	Available detection items: Vehicle type, vehicle body color,
		top, top color, occupancy, and hat.
<u>A</u>	Motor vehicle	Available detection items: License plate, vehicle body color,
		vehicle type, vehicle logo, vehicle series, sunshield,
		seatbelt, smoking, calling, ornament, and annual inspection
		mark.
		Up to 7 items can be selected at the same time for motor
		vehicle detection.
0	Settings	Click the button to select the detection items.

## 3.2 AI Live Settings

#### Preparation

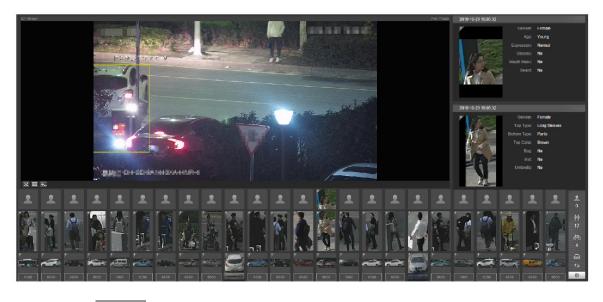

Select Setting > Event > Smart Plan, and then enable Face Detection, Face Recognition or Video Metadata. For the method to enable the function, see "5.4.4 Smart Plan.". For the operations, see "5.4.6 Face Recognition" or "5.4.9 Video Metadata."

#### Procedure

<u>Step 1</u> Click the **AI Live** tab. The **AI Live** interface is displayed. See Figure 3-5. The information display area of detected targets is on the right side; the snapshot display

area is on the bottom; the statistics area of the detected targets is on the lower right corner.

Figure 3-5 AI live interface

Step 2 Click to set the detection items of the targets. See Figure 3-6.

Figure 3-6 Detection items selection interface

Step 3 Click to complete the configuration

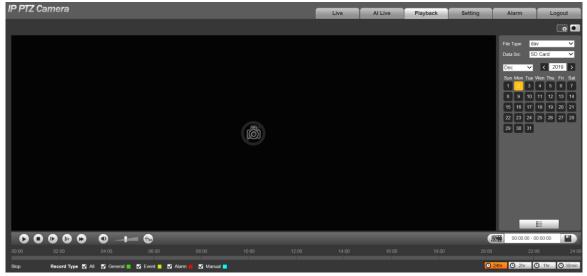

# 4 Playback

You can watch the saved pictures and videos on the **Playback** interface.

Before using the function, you need to set the period, storage method, and record control of recording and snapshot first. For details, see "5.5 Storage."

Click the **Playback** tab, and the **Playback** interface is displayed. See Figure 4-1.

Figure 4-1 Playback interface

## 4.1 Video Playback

Select **dav** from the **File Type** list, and the video playback interface is displayed. See Figure 4-2. For parameter description, see Table 4-1.

Figure 4-2 Video playback

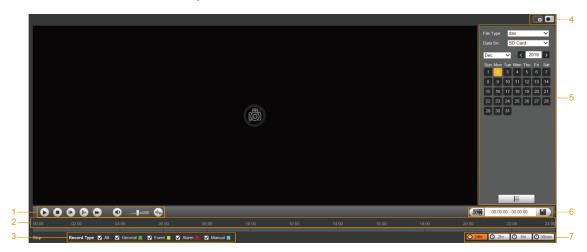

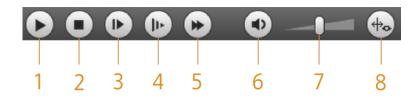

Table 4-1 Vid	leo playback pa	rameter description

<u>Step 2</u> Configure parameters as needed. For the parameter description, see Table 4-5.

Table 4 9 Baten download parameters description					
Parameter	Description				
	Select the event type that triggers video recording. All Videos,				
Туре	General, Event, Alarm, Manual, and Snapshot are selectable. It is				
	All Videos by default.				
Start Time/EndTime	Select the start time and end time for video searching.				
File type	Select the video type. dav and mp4 are selectable. It is dav by default.				
Path	Click <b>Browse</b> , and set the saving path for video files. The default path				
Fau	is C:\Users\admin\WebDownload\PlaybackRecord.				

Table 4-5 Batch download parameters description

<u>Step 3</u> Click **Search** to search for the video files that meets the requirements.

<u>Step 4</u> Select the video, and click **Download**. The video files are downloaded and saved in the saving path.

#### You can select multiple files to download them.

#### **Displaying File List**

- <u>Step 1</u> Click a day with blue shading, and recording file progress bar with different colors is displayed on the time axis.
  - Green: Represents general videos.
  - Yellow: Represents motion detection videos.
  - Red: Represents alarm videos.
  - Blue: Represents manually recorded videos.
- <u>Step 2</u> Click anywhere on the progress bar, and the video will be played from that time. For the progress bar, see Figure 4-8.

- Step 3 Click \_\_\_\_\_, and videos recorded on the selected day will be displayed in a list.
- <u>Step 4</u> For the playback file list, see Figure 4-9. For the parameter description, see Table 4-6. To play back a file in the list, double-click the file.

Figure 4-9 Playback file (2)

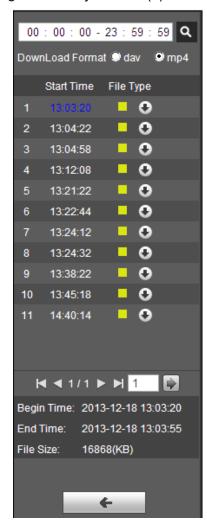

Table 4-6 Playback file parameter description (2)

Parameter	Description
٩	Search all the recorded files from the start time to the end time on the
<u> </u>	selected date.
Download	There are two entione: dow and mn4
Format	There are two options: <b>dav</b> and <b>mp4</b> .
	Click the download button, and the files will be saved to the storage path
0	set in "5.1.2.5 Path."
$\mathbf{\nabla}$	
	Downloading and playing video at the same time is not supported.
<del>(</del>	Click the button to go back to the calendar interface.

# 4.1.5 Video Clipping Area

You can clip the videos in this area. See Figure 4-10.

Figure 4-10 Video clipping

- <u>Step 1</u> Click the time axis to select the start time for video clipping. The time must be within the progress bar range.
- <u>Step 2</u> Hover over <u>Main</u>, and then **Select start time** is displayed.
- Step 3 Click to set the start time for video clipping.
- <u>Step 4</u> Click the time axis to select the end time for video clipping. The time must be within the progress bar range.
- <u>Step 5</u> Hover over *Link*, and then **Select end time** is displayed.
- Step 6 Click to set the end time for video clipping.
- Step 7 Click \_\_\_\_\_, and the clipped video will be saved in the path set in "5.1.2.5 Path."

# 4.1.6 Progress Bar Time Formats

For the progress bar time format, see Figure 4-11. For the parameter description, see Table 4-7.

C 24hr C 30min 🕒2hr ()1hr

Table 4-7 Progress bar time format description

Parameter	Description
O24hr	Click the button, and then the progress bar displays the recordings in
<b>G</b> 24111	24-hour mode.
Oakr	Click the button, and then the video within the 2-hour period in which this
🕒 2hr	video was recorded is displayed.
<b>O</b> 1hr	Click the button, and then the video within the 1-hour period in which this
Gim	video was recorded is displayed.
C 20min	Click the button, and then the video within the 30-minute period in which
<b>⊖</b> 30min	this video was recorded is displayed.

# 4.2 Picture Playback

Select **jpg** from the **File Type** list. For the picture playback interface, see Figure 4-12. For the parameter description, see Table 4-8.

## Figure 4-15 Playback file (2)

- Step 1 Click \_\_\_\_\_, and the snapshots on a selected day will be displayed in a list.
- <u>Step 2</u> To play back a snapshot, double-click the corresponding file. For the parameter description, see Table 4-10.

Parameter	Description
٩	Search all the snapshots from the start time to the end time on the selected date.
•	Click the button to download the snapshot to local storage.
<b>+</b>	Click the button to go back to the calendar interface.

# 4.2.3 Snapshot Types

After you select a snapshot type, only the files of the selected type are displayed in the file list. For snapshot types, See Figure 4-16.

# **5** Setting

# 5.1 Camera

# 5.1.1 Conditions Settings

This section describes how to set camera attributes and manage profiles.

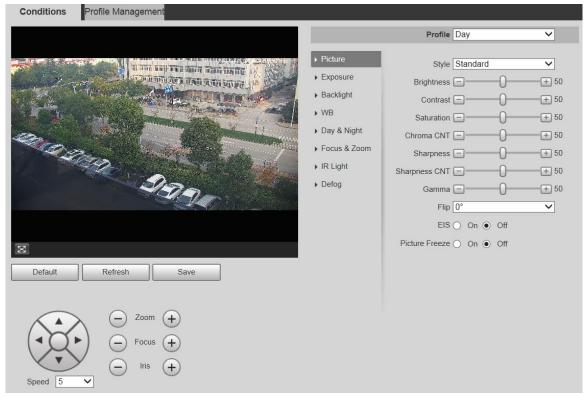

# 5.1.1.1 Conditions

## Picture

Set camera attributes and picture parameters to achieve the best display effect. <u>Step 1</u> Select **Setting > Camera > Conditions > Conditions > Picture**.

The **Picture** interface is displayed. See Figure 5-1.

Figure 5-1 Picture interface

Step 2 Configure parameters as needed. For parameter description, see Table 5-1.

Table 5-1 Picture setting parameter description

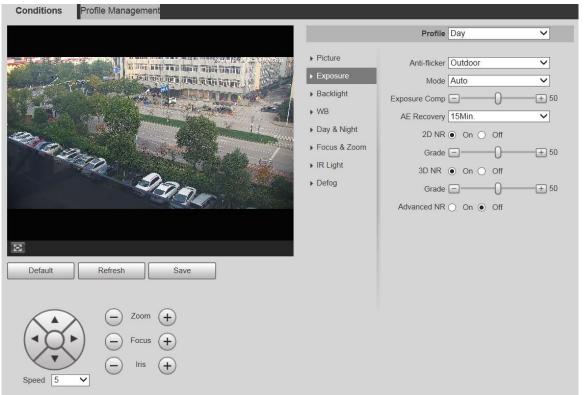

Devenueter		
Parameter	Description	
Profile	There are three options: <b>General</b> , <b>Day</b> , and <b>Night</b> . You can view the	
	configurations and the effect of the selected mode. <b>Day</b> is selected by default.	
Style	Set the image display style. There are three options: <b>Soft</b> , <b>Standard</b> , and	
,	Vivid. Standard is selected by default.	
Brightness	Set the overall image brightness. The larger the value is, the brighter the image	
5	will be. The value ranges from 0 to 100.	
Contrast	Set the image contrast. The larger the value is, the greater the contrast will be.	
	The value ranges from 0 to 100.	
Saturation	Set the intensity of colors. The larger the value is, the brighter the colors will	
	be. The value ranges from 0 to 100.	
	The larger the value, the higher suppression on image colors. The value	
Chroma	ranges from 0 to 100.	
CNT		
UN1	This parameter takes effect only when the Device is in the environment with	
	low luminance.	
	Set the sharpness of picture edges. The larger the value is, the more obvious	
	the edge will be. The value ranges from 0 to 100.	
Sharpness		
	If the value is too large, there might be image noise. Set the value according to	
	the actual condition.	
	The larger the value is , the stronger the sharpness CNT will be. The value	
Sharppaga	ranges from 0 to 100.	
Sharpness		
CNT	This parameter takes effect only when the Device is in the environment with	
	low luminance.	
	Change image brightness through non-linear tuning to expand the dynamic	
Gamma	display range of images. The larger the value is, the brighter the image will be.	
	The value ranges from 0 to 100.	
	Monitoring videos can be flipped over. There are two options.	
Flip	• <b>0</b> °: The monitoring video is normally displayed. It is <b>0</b> ° by default.	
	• <b>180</b> °: The monitoring video is flipped over.	
EIS	Electronic image stabilization (EIS) is used to effectively solve the problem of	
	image shaking during use, thus presenting clearer images. It is <b>Off</b> by default.	
	This function is available on select models.	
	• This parameter takes effect only when the Device is in the environment	
	with low luminance.	
	• Optical image stabilization and electronic image stabilization cannot be	
	enabled at the same time.	
Dioturo	After you select <b>On</b> , the image at the called preset is displayed directly if you	
Picture	call a preset or tour, and no images during the rotation of the Device are	
Freeze	displayed.	
Step 3 Click Save.		

You can control the amount of light per unit area reaching the electronic image sensor by adjusting parameters on the **Exposure** interface.

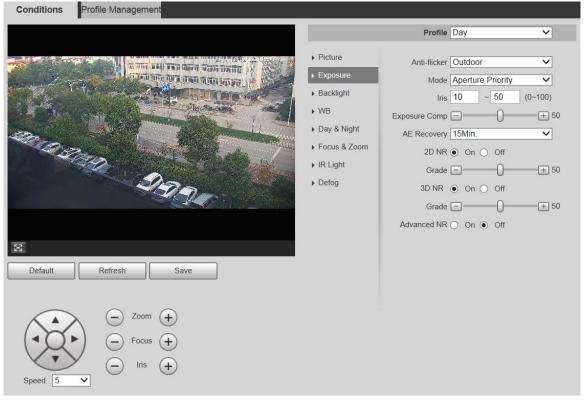

<u>Step 1</u> Select Setting > Camera > Conditions > Conditions > Exposure.

The **Exposure** interface is displayed. See Figure 5-2 to Figure 5-6.

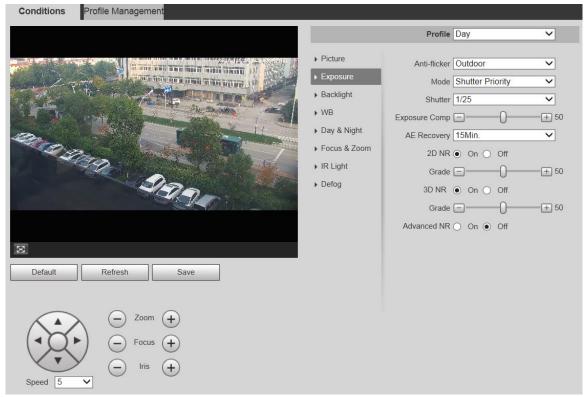

Figure 5-2 Exposure—auto mode

Step 2	Configure parameters as needed	I. For parameter description, see Table 5-2.
		· · · · · · · · · · · · · · · · · · ·

Table 5-2 Exposure setting parameter description

Parameter	Description		
Anti-flicker	<ul> <li>You can select 50Hz, 60Hz, or Outdoor from the list.</li> <li>50Hz: When the alternating current is 50Hz, the exposure is automatically adjusted to make sure that there are no stripes on images.</li> <li>60Hz: When the alternating current is 60Hz, the exposure is automatically adjusted to make sure that there are no stripes on images.</li> <li>Outdoor: You can switch the modes to achieve the effect you want.</li> </ul>		
Mode			

Parameter	Description		
Gain	You can set the exposure gain. The value ranges from 0 to 100.		
Shutter	You can adjust the exposure time of the Device. The larger the shutter		
Shuller	value, the brighter the image.		
Iris	You can set the Device luminous flux. The larger the iris value, the brighter		
1115	the image.		
Exposure	You can set the exposure compensation value. The value ranges from 0 to		
Comp	100.		
	Automatic exposure is an automated digital camera system that adjusts the		
	aperture and shutter speed, based on the external lighting conditions for		
AE Recovery	images and videos. If you have selected an <b>AE Recovery</b> time, the		
	exposure mode will be restored to the previous mode after you adjusted the		
	Iris value. There are five options: Off, 5Min, 15Min, 1Hour, and 2Hour.		
	2D noise reduction is the process of removing noise from a signal. The		
2D NR	higher the grade is, the less the noise will be, and images appear to be		
	blurrier.		
	3D noise reduction is the process of removing noise from a signal. The		
3D NR	higher the grade is, the less the noise will be, and images appear to be		
	blurrier.		
Grade	Noise reduction grade. The value ranges from 0 to 100. The larger the		
Grade	value is, the less the noise will be.		
	Realize noise suppression effect through 3D and 2D video filtering method.		
Advanced NR			
	The function is available on select models.		
ton 2 Click Cov			

# Backlight

# 

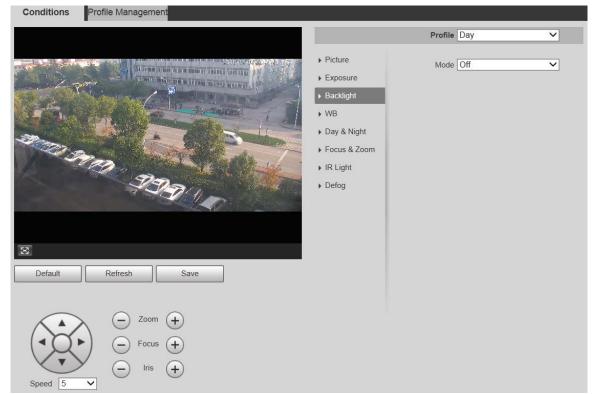

The backlight function cannot be configured if defog function is enabled. There will be a prompt on the interface.

You can use this function to adjust the backlight compensation mode of the monitoring screen.

<u>Step 1</u> Select Setting > Camera > Conditions > Conditions > Backlight.

The **Backlight** interface is displayed. See Figure 5-7.

## Figure 5-7 Backlight settings

<u>Step 2</u> Select a backlight mode from the list.

There are 4 options: Off, BLC, HLC, and WDR.

- Off: Backlight is disabled.
- BLC: Backlight compensation corrects regions with extremely high or low levels of light to maintain a normal and usable level of light for the object in focus.
- WDR: When in WDR (Wide Dynamic Range) mode, the Device constrains over bright areas and compensates dark areas to improve the image clarity.
- HLC: Highlight compensation dims strong light, so that the Device can capture details of faces and license plates in extreme light conditions. It is applicable to the entrance and exit of toll stations or parking lots.

#### Step 3 Click Save.

If you select Off, other backlight mode configurations will not be effective.

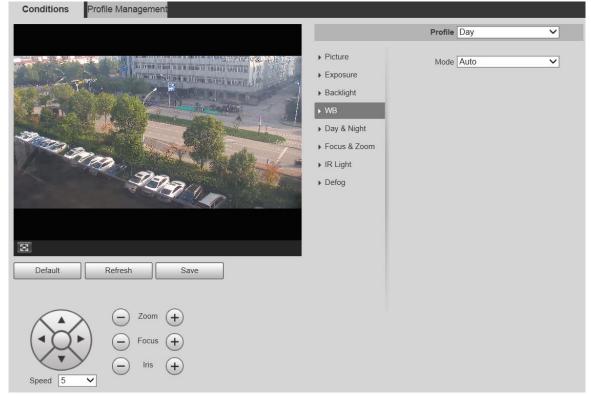

## WB

In this mode, you can make a white object displaying itself clearly on the video image in all environments.

#### <u>Step 1</u> Select Setting > Camera > Conditions > WB.

The **WB** interface is displayed. See Figure 5-8.

## Figure 5-8 WB settings

Step 2 Select WB mode from the list.

You can select from Auto, Indoor, Outdoor, ATW, Manual, Sodium Lamp, Natural, and Street Lamp. Auto is selected by default.

Step 3 Click Save.

## Day & Night

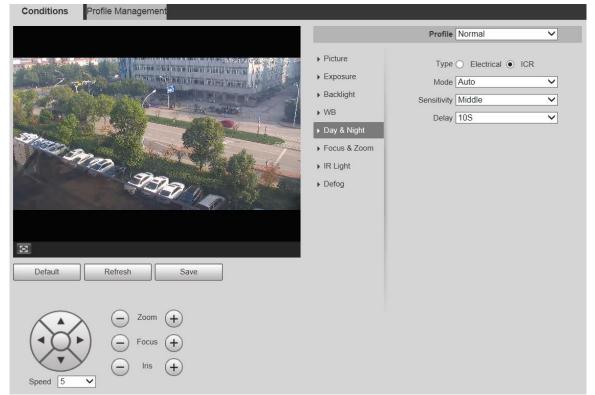

Defog function cannot be configured if **Day & Night** function is enabled. There will be a prompt on the interface.

This function allows you to switch between the color mode and the black & white mode, ensuring clear monitoring screen in a dim environment.

#### <u>Step 1</u> Select Setting > Camera > Conditions > Conditions > Day & Night.

The Day & Night interface is displayed. See Figure 5-9.

## Figure 5-9 Day & night settings

<u>Step 2</u> Configure parameters as needed. For parameter description, see Table 5-3.

Parameter	Description		
	There are two options: Electrical and ICR. ICR is selected by default.		
Туре	ICR: IR filter is used for day & night switch.		
	• Electrical: Image processing method is used for day & night switch.		
	Select a mode from the list (Your selection is independent from the profile).		
	Auto is selected by default.		
Mode	Color: The Device only outputs color images.		
WODE	• Auto: The Device outputs color images or black-and-white images		
	according to ambient conditions.		
	• <b>B/W</b> : The Device only outputs black-and-white images.		
	Adjust the sensitivity to switch between different modes. There are three		
	options: Low, Middle, and High.		
Sensitivity			
	You can set sensitivity only when Day & Night mode is set to Auto.		
	Adjust the delay time to switch between different modes. The value ranges		
	from 2 s to 10 s.		
Delay			
	You can set <b>Delay</b> only when <b>Day &amp; Night</b> mode is set to <b>Auto</b> .		

Table 5-3 Day & night parameter description

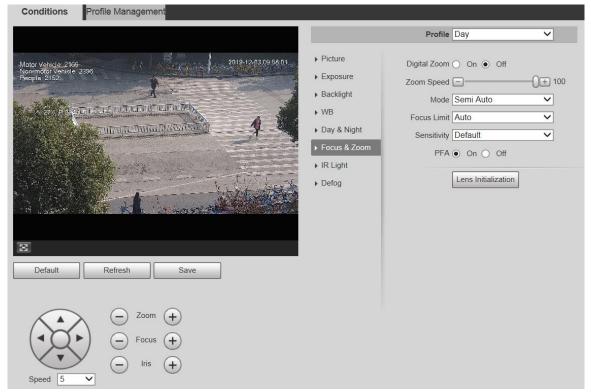

#### Step 3 Click Save.

## Focus & Zoom

Digital zoom refers to capturing a part of the image to magnify it. The higher the magnification is, the blurrier the images will become.

# <u>Step 1</u> Select Setting > Camera > Conditions > Conditions > Focus & Zoom. The Focus & Zoom interface is displayed. See Figure 5-10.

Figure 5-10 Focus & zoom settings

Step 2	Configure each	parameter as	needed. S	See Table 5-4.
	oornigaro oaon	parameter ao	noodod. e	

Parameter	Description		
Digital Zoom	Select On or Off to enable or disable digital zoom. Off is selected by		
Digital 20011	default.		
Zoom Speed	The larger the value is, the faster the Device zooms.		
	Select the focus triggering mode. There are three options: Semi Auto,		
	Auto, and Manual. Semi Auto is selected by default.		
	• Semi Auto: The Device focuses automatically when zoom or ICR		
Mada	switch is detected.		
Mode	• Auto: The Device focuses automatically when scene changes, zoom,		
	or ICR switch are detected.		
	• Manual: The Device cannot focus automatically. You need to adjust		
	the focus manually.		
	You can select the shortest focus distance, which means the Device will		
Focus Limit	focus on objects farther than the shortest focus distance. If you select		
	Auto, the Device will select an appropriate shortest distance according to		
	the zoom value.		
	Sensitivity is the capacity of resisting interference of the Device when		
Sensitivity	focusing. The smaller the value is, the more capable the Device can resist		
	interference when focusing.		
	If you enable this function, the image is relatively clear during zoom. If you		
PFA	disable this function, the speed is relatively high during zoom.		

Parameter	Description
Lens	Click this button, and the lens will be initialized automatically. The lens will
Initialization	be extended to calibrate the zoom and focus.

## IR Light

Common illuminators are classified into infrared IR lights, white lights, and laser lights. Different device models support different types of illuminators, and have different configuration interfaces. The actual interface shall prevail. This section describes how to configure these light types.

## Infrared IR Light/White Light

These are the conditions for using infrared IR light and white light.

- When the day & night mode is set to **B/W**, the monitoring screen is black and white. In this case, infrared IR light is used.
- When the day & night mode is set to **Color**, the monitoring screen is colored. In this case, white light is used.
- When the day & night mode is set to **Auto**, the monitoring screen color changes with the ambient light condition, and the illuminator varies with the monitoring screen. In **B/W** mode, the infrared IR light is turned on; in **Color** mode, the white light is turned on.

• Some models are equipped with photoresistor that can turn on different types of illuminators based on the ambient brightness.

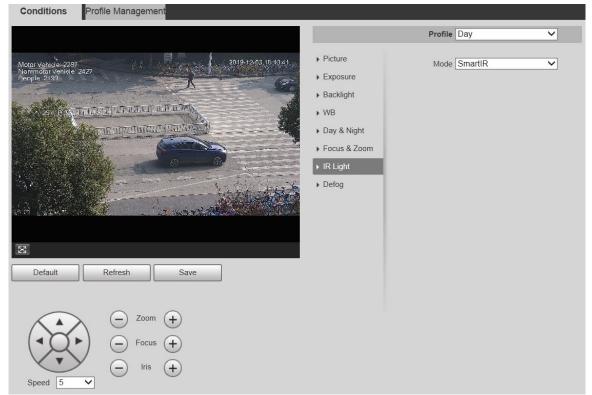

Perform the following steps to set illuminators.

## <u>Step 1</u> Select Setting > Camera > Conditions > Conditions > IR Light.

The **IR Light** interface is displayed. See Figure 5-11.

#### Figure 5-11 IR light settings—ZoomPrio

Parameter	Description
Mode	There are 5 options: Manual, SmartIR, ZoomPrio, Timing, and Off.
	• ZoomPrio: The system adjusts the IR light brightness automatically
	according to the zoom times.
	• SmartIR: The system controls the IR light intensity according to actual

Table 5-5 IR light parameter description

Parameter	Description	
	conditions.	
	Manual: Set IR light brightness manually.	
	• <b>Timing</b> : Enable different light types in different time periods according	
	to actual condition.	
	Off: Turn off the IR light.	
	• Some models do not support SmartIR, Manual, Timing, or Off.	
	• In ZoomPrio mode, IR light and white light are supported, and IR light	
	is selected by default.	
	• In <b>Timing</b> mode, you can set four periods with different light types.	
	Only infrared IR light supports the SmartIR mode.	
	• The IR light is turned off for cameras with low power consumption by	
	default. Turn on the IR light if necessary.	
Light Type	You can select IR Light or White Light.	
Correction	Compensate for the brightness of the IR light. The value ranges from 0 to	
Correction	100.	
Near Light	Set the brightness of the near light. The value ranges from 0 to 100.	
Far Light	Set the brightness of the far light. The value ranges from 0 to 100.	
Far Light Step 3, Click <b>Sav</b>		

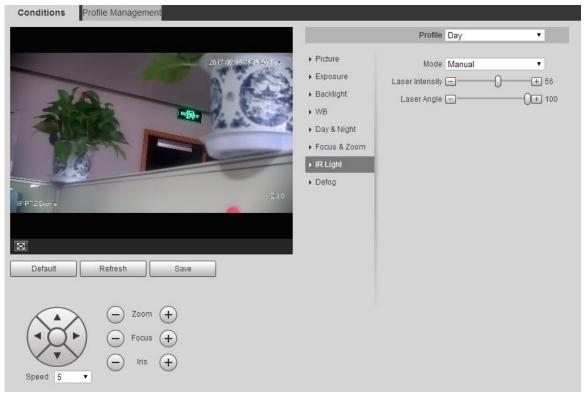

## Laser Light

Laser light makes compensation for the ambient environment when it is used for long-distance monitoring.

## <u>Step 1</u> Select Setting > Camera > Conditions > Conditions > IR Light.

The IR Light interface is displayed. See Figure 5-16.

Figure 5-16 Laser light settings

<u>Step 2</u> Configure parameter as needed. Refer to Table 4-6 for more details.

Table 5-6 Laser light setting parameter description

Description
Select the laser light mode from <b>ZoomPrio</b> and <b>Manual</b> . It is <b>ZoomPrio</b> by default.
<ul> <li>ZoomPrio: The Device can automatically adjust laser light brightness according to the zoom times.</li> </ul>
• <b>Manual</b> : Manually set laser light brightness and angle value.
Set the intensity of the laser light. The value ranges from 0 to 100.
Set the intensity of the laser light. The value fanges from 0 to 100.
Set the angle value from 0 to 100.

# Defog

# 

The defog function cannot be configured if backlight function is enabled. There will be a prompt on the interface.

Image quality drops if the Device is installed in foggy or hazy environment. You can enable defog to improve image quality.

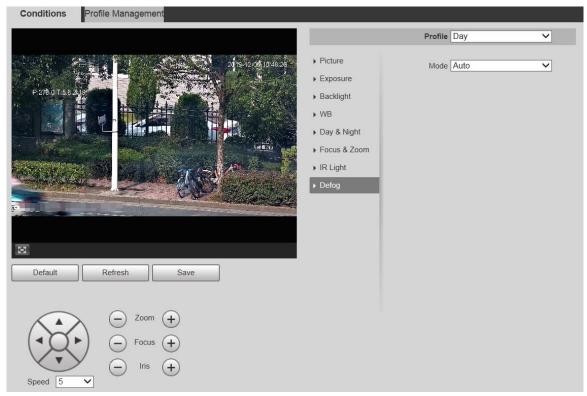

## <u>Step 1</u> Select Setting > Camera > Conditions > Conditions > Defog.

The **Defog** interface is displayed. See Figure 5-17 and Figure 5-18.

Figure 5-17 Defog settings—manual

Figure 5-18 Defog settings—auto

Step 2 Configure parameters as needed. For parameter description, see Table 5-7.

Table 5-7 Defog parameter description
Description
Select the defog mode of the Device. You can select A

Parameter	Description
Mode	Select the defog mode of the Device. You can select Auto, Manual, or
	Off. It is Off by default.
	For the Device that supports optical defog, in Auto mode, optical defog
	and electronic defog switch automatically according to the algorithm.
	And in <b>Off</b> mode, electronic defog is enabled by default.
Intensity	Set the defog intensity of the Device. You can select from Low, Medium,
Intensity	or <b>High</b> .
Defog Enhancement	
	Only the Device that supports optical defog has this parameter.
	In Manual mode, if you enable this function, both optical defog and
	electronic defog are enabled. (You need to enable Auto mode for Day &
	Night to use the function.)

Step 3 Click Save.

# 5.1.1.2 Profile Management

<u>Step 1</u> Select Setting > Camera > Conditions > Profile Management. The **Profile Management** interface is displayed.

<u>Step 2</u> Select the profile management mode.

There are three options: General, Full Time and Schedule.

If you select General, monitoring is based on the general configuration of the • Device. See Figure 5-19.

Figure 5-19 Profile management—general

Conditions Pro	file Management		
Profile Management	🖲 General 🔵 Full	Time 🔿 Schedul	е

Step 3 Click Save.

# 5.1.2 Video

You can set the video stream, snapshot stream, video overlay, ROI, and storage path of the Device.

# 5.1.2.1 Video Stream

This section describes how to set the video stream for the monitoring screen.

```
<u>Step 1</u> Select Setting > Camera > Video > Video.
```

```
The Video interface is displayed. See Figure 5-22.
```

#### Figure 5-22 Video stream settings

Video S	napshot Ov	verlay	ROI	Path			
Main Stream					Sub Stream		
					Inable	Sub Stream 1	<b>~</b>
Encode Mode	H.264H	~			Encode Mode	H.264H	<b>~</b>
Smart Codec	Off	~			Resolution	704*576(D1)	<b>~</b>
Resolution	1920*1080(1080P)	~			Frame Rate(FPS)	25	<b>~</b>
Frame Rate(FPS)	25	~			Bit Rate Type	CBR	<b>~</b>
Bit Rate Type	CBR	~			Reference Bit Rate	256-2304Kb/S	
Reference Bit Rate	1792-8192Kb/S				Bit Rate	1024	✓ (Kb/S)
Bit Rate	4096	✓ (Kb/S)			I Frame Interval	50	(25~150)
I Frame Interval	50	(25~150)			SVC	1(off)	<b>~</b>
SVC	1(off)	~					
✓ Watermark Settings							
Watermark Character	DigitalCCTV						
	Default	Refresh	Save				

- The stream configuration interfaces might vary depending on devices, and the actual interface shall prevail.
- The default bit rate of different devices might vary, and the actual product shall prevail.

<u>Step 2</u> Configure parameters as needed. For parameter description, see Table 5-8.

Parameter	Description
Enable	You can select the check box to enable sub stream. The sub stream is
Ellable	enabled by default.
Encode Mode	You can select H.264, H.264H, H.264B, H.265, MJPEG, MPEG4, or SVAC.
	Enable Smart Codec to improve video compressibility and save storage
	space.
Smart Codec	
	After <b>Smart Codec</b> is enabled, the Device does not support the third stream,
	ROI, smart event, and other functions. The actual interface shall prevail.
Resolution	Multiple resolution types are available for you to choose, and each type
Tresolution	corresponds to a unique recommended stream value.
Frame Rate	PAL: 1–25 frames/s or 1–50 frames/s. The frame rate changes with the
(FPS)	resolution.
	There are two options: <b>CBR</b> (constant bit rate) and <b>VBR</b> (variable bit rate).
Bit Rate Type	• Picture quality can be set only in VBR mode, and cannot be set in
Dir rute Type	CBR mode.
	• In <b>MJPEG</b> encode mode, <b>CBR</b> is the only option for <b>Bit Rate Type</b> .
Reference Bit Rate	The recommended bit rate range is based on the resolution and frame rate.
Bit Rate	It is the upper limit of stream in VBR. In CBR, the value is fixed.
	The number of P frames between two I frames. The range varies with the
I Frame Interval	frame rate, and the maximum value is 150. It is recommended to set the
	interval twice the frame rate.
	Layered encoding can be done for FPS. SVC is a scalable encoding method
SVC	on time domain. It is 1 by default, which means no layered coding. You can
	set 2, 3 or 4 layered encoding.

Table 5-8 Video stream parameter description

Parameter	Description			
Watermark	You can varify the watermark to shack if the video has been tempered			
Settings	You can verify the watermark to check if the video has been tampered.			
	You can verify the watermark to check if the video has been tampered. Select			
	Watermark Settings check box to enable Watermark Character. The			
Watermark	watermark character is <b>DigitalCCTV</b> by default, and you can modify it.			
Character				
	Watermark character consists of up to 128 characters from letters, standard			
	symbols, spaces, and special characters.			

Step 3 Click Save.

# 5.1.2.2 Snapshot

This section describes how to set streams for snapshots.

## <u>Step 1</u> Select Setting > Camera > Video > Snapshot.

The **Snapshot** interface is displayed. See Figure 5-23.

Figure 5-23 Snapshot stream settings

Video	Snapshot	Overlay	ROI	Path
Snapshot Type	General	~		
Image Size	1080P (1920*1080)			
Quality	5	~		
Interval	1S	~		
	Default	Refresh	Save	

<u>Step 2</u> Configure parameters as needed. For parameter description, see Table 5-9.

Table 5-9 Snapshot stream parameter description

Parameter	Description		
	You can select <b>General</b> or <b>Event</b> .		
	• General refers to capturing pictures within the time range set in the		
	schedule. For details, see "5.5.1 Schedule."		
Snapshot Type	• Event means capturing pictures when motion detection, video		
	tampering, or local alarms are triggered. For how to enable		
	snapshots for motion detection, video tampering, or local alarms,		
	see "5.4 Event Management."		
Image Size	It is the same as the resolution of the selected snapshot main stream, and		
	cannot be modified on this interface.		
Quality	You can set the snapshot quality from 1 to 6 levels. Level 1 is the lowest		
	level, and level 6 is the highest level.		
Interval	Set the snapshot frequency. You can select from 1 s through 7 s or		
	Customized.		

Step 3 Click Save.

# 5.1.2.3 Overlay

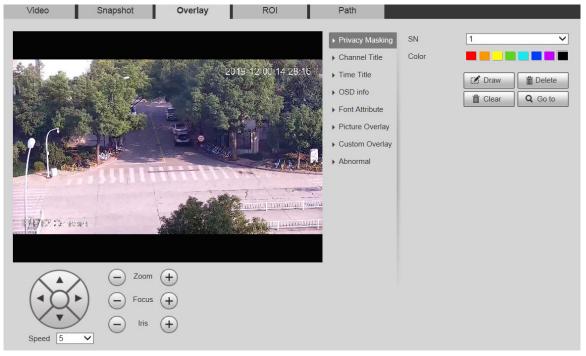

This section describes how to set the overlay information on the monitoring screen.

<u>Step 1</u> Select Setting > Camera > Video > Overlay.

The **Overlay** interface is displayed.

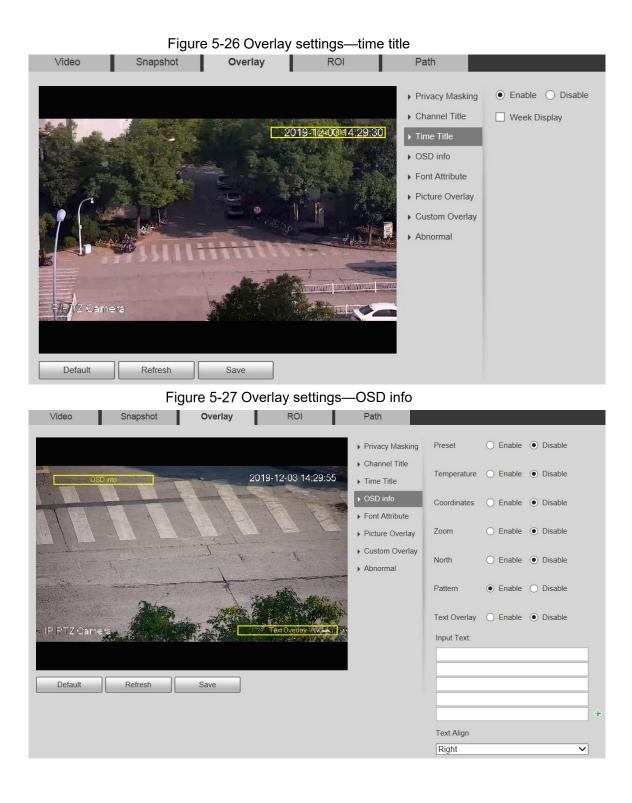

<u>Step 2</u> Configure overlay information as needed. For the configuration interfaces, see the following figures. For the parameter description, see Table 5-10.

Figure 5-24 Overlay settings—privacy masking

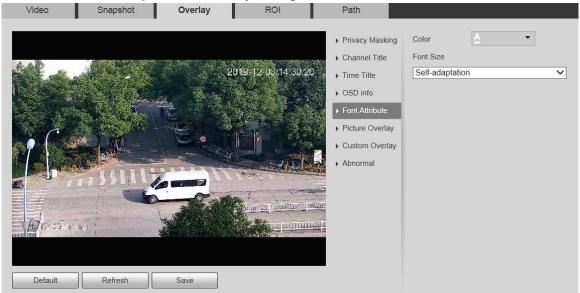

#### Figure 5-25 Overlay settings—channel title

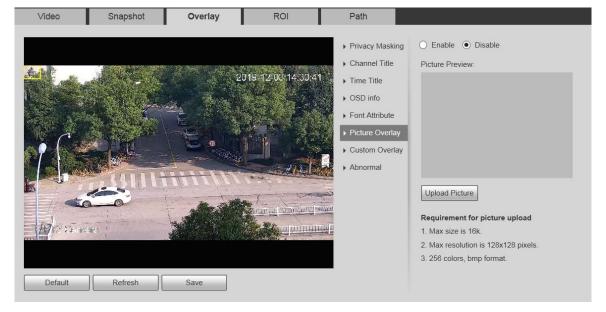

## Figure 5-30 Overlay settings—abnormal

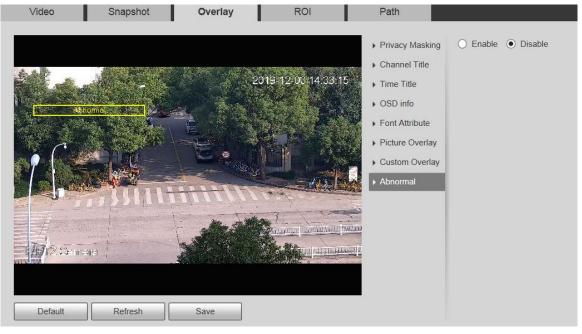

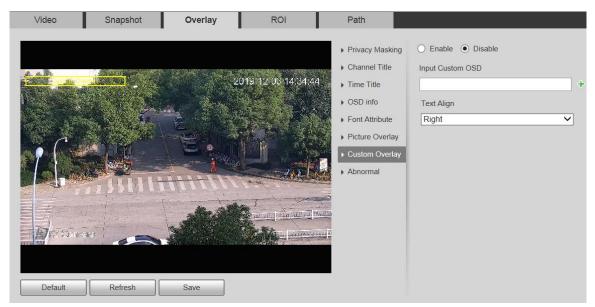

Figure 5-31 Overlay settings—GPS position

Figure 5-32 Overlay settings—custom overlay

#### Table 5-10 Overlay setting parameter description

Parameter	Description
	Privacy masking refers to setting a certain region in the monitoring screen to
	protect privacy.
	• To draw a privacy mask in the live view, click <b>Draw</b> .
Privacy Masking	• To delete a privacy mask, click <b>Delete</b> .
	• To clear all privacy masks, click <b>Clear</b> .
	You can set the number, type and color of the privacy mask. To view a
	privacy mask, click <b>Go to</b> .
	Set whether to display the channel title on the monitoring screen. You can
	adjust the channel title location by dragging the box.
Channel Title	
	Click 🕂 to add a channel title. You can also select the <b>Text Align</b> of the
	channel title.
	Set whether to display time on the monitoring screen, and you can select
Time Title	whether to display the week. You can adjust the time title location by
	dragging the box.
	Set whether to display the preset, temperature, PTZ coordinate, zoom, north
OSD info	direction, RS485, and other information on the monitoring screen. You can
	adjust the OSD info location by dragging the box. There are two options for
	Text Align: Left and Right.
Font Attribute	Set the font of the channel title, time title, and OSD info, and you can also set
	the color and size of the font.
	Set whether to display the overlaid picture on the monitoring screen. Click
	Upload Picture to overlay local pictures on the monitoring screen. You can
Picture Overlay	adjust the location of an overlaid picture by dragging the yellow box.
	Geographic location and picture overlay cannot be both enabled.
Abnormal	Set whether to display abnormality information on the monitoring screen.

Parameter	Description
Custom Overlay	Add custom OSD information on the monitoring screen. Click 🕂 to add one line of custom OSD information. You can also select the <b>Text Align</b> of the channel title.

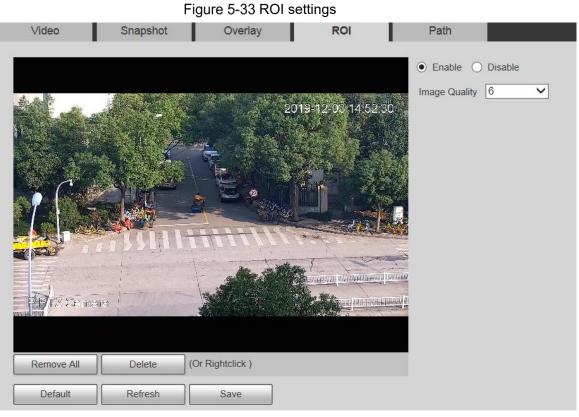

## 5.1.2.4 ROI

ROI is available on select models.

Set a key monitoring region as a ROI (region of interest). You can set the image quality of this region.

#### <u>Step 1</u> Select Setting > Camera > Video > ROI.

The ROI interface is displayed. See Figure 5-33.

- Step 2 Select Enable to enable this function.
- <u>Step 3</u> Press and hold the left mouse button to draw boxes on the monitoring screen. You can draw up to 4 boxes.

- Click **Delete** or right click to delete the drawn boxes.
- Click Remove All to clear all boxes.
- <u>Step 4</u> Set the image quality of the ROI.
- Step 5 Click Save.

# 5.1.2.5 Path

The storage path is associated with the snapshot and recording on the **Live** interface. You can set the path of **Live Snapshot** and **Live Record** respectively.

The storage path is associated with the snapshot, downloaded and clipped files on the **Playback** interface. You can set the path of **Playback Snapshot**, **Playback Download**, and **Video Clips** respectively.

#### <u>Step 1</u> Select Setting > Camera > Video > Path.

The **Path** interface is displayed. See Figure 5-34.

Figure 5-34 Path settings

Video	Snapshot	Overlay	ROI	1	Path
Live Snapshot	C:\Users\	\WebDownload\LiveS	napshot		Browse
Live Record	C:\Users\	\WebDownload\LiveR	ecord		Browse
Playback Snapshot	C:\Users\	WebDownload\Playb	ackSnapshot		Browse
Playback Download	C:\Users\	\WebDownload\Playb	ackRecord		Browse
Video Clips	C:\Users\	WebDownload/Video	Clips		Browse
	Default	Save			

Step 2 Set each storage path.

- Default storage path for snapshots:
   C:\Users\admin\WebDownload\LiveSnapshot.
- Default storage path for recording:
   C:\Users\admin\WebDownload\LiveRecord.
- Default storage path for playback snapshot:
   C:\Users\admin\WebDownload\PlaybackSnapshot.
- Default storage path for playback download:
   C:\Users\admin\WebDownload\PlaybackRecord.
- Default storage path for video clips: C:\Users\admin\WebDownload\VideoClips.

admin is the login account.

Step 3 Click Save.

# 5.1.3 Audio

This function is available on select models.

## 5.1.3.1 Audio

Set audio parameters of the Device.

<u>Step 1</u> Select Setting > Camera > Audio > Audio.

The Audio interface is displayed. See Figure 5-35.

Figure 5-35 Audio settings

Main Stream	
Enable	
Encode Mode	G.711A 🗸
Sampling Frequency	8000 🗸
Sub Stream	
Enable	Sub Stream 1
Encode Mode	G.711A 🗸
Sampling Frequency	8000 ~
Attribute	
AudioIn Type	Lineln V
Noise Filter	Disable V
Microphone Volume	<b>—</b> ———————————————————————————————————
Speaker Volume	

<u>Step 2</u> Configure parameters as needed. For parameter description, see Table 5-11.

Table 5-11 Audio setting parameter description

Parameter	Description	
Enable	<ul> <li>Enable Main Stream or Sub Stream, and then the network stream contains both audio and video; otherwise, it is only video stream.</li> <li>Audio can be enabled only when video has been enabled.</li> </ul>	
Encode Mode	The audio encoding modes include G.711A, G.711Mu, G726, PCM, MPEG2-Layer2, G.722.1, G.729, and AAC. It is G.711A by default. The audio encoding mode set here applies to both audio streams and voice talks.	
Sampling Frequency	The supported sampling frequencies include <b>8000</b> , <b>16000</b> , <b>32000</b> , <b>48000</b> , and <b>64000</b> . The sampling frequency varies depending on the encoding mode. Select an encoding mode as needed.	
AudioIn Type	Set the audio input type. You can select LineIn or Mic.	
Noise Filter	Set whether to enable noise filter. The function is enabled by default.	

Parameter	Description
NR (Noise Reduction) Level	Adjust the noise reduction level from 0 to 100.
Microphone Volume	Adjust the microphone volume from 0 to 100.
Speaker Volume	Adjust the speaker volume from 0 to 100.

# **5.2 Network Settings**

# 5.2.1 TCP/IP

Configure the IP address and DNS server of the Device to connect it to other devices in the network.

Before configuring network parameters, make sure that the Device is connected to the network properly.

- If there is no router in the network, assign an IP address in the same network segment.
- If there is a router in the network, set the corresponding gateway and subnet mask.

#### <u>Step 1</u> Select Setting > Network > TCP/IP.

The TCP/IP interface is displayed. See Figure 5-36.

Figure 5-36 TCP/IP settings

TCP/IP	
Host Name	IPPTZCamera
Ethernet Card	Wire(Default)
Mode	● Static ○ DHCP
MAC Address	R . H . G . H . H . H
IP Version	IPv4 V
IP Address	TTL F. 47. 41
Subnet Mask	264. 264. 264. 6
Default Gateway	424. 5. 42. 4
Preferred DNS	231. 5. 5. 5
Alternate DNS	323. 6. 6. 6
Enable ARP/Ping to s	et IP address service
	Default Refresh Save

Parameter	Description		
	Set the name of the current device. The host nar	me can be English or	
Host Name	Chinese within 63 bytes.	he can be English of

	Select the check box, and then you can modify a	ind set the device IP	
	address through ARP/Ping command if the MAC	address is known.	
Enable	The function is enabled by default. During reboot, you will have no more		
ARP/Ping to set	than 2 minutes to configure the Device IP addres	ss by a ping packet with	
IP address	certain length. The server will be turned off in 2 minutes, or it will be turned		
service	off immediately after the IP address is successfu function is not enabled, the IP address cannot be		
Stop 2 Click Sour	packet.		

Table 5-12 TCP/IP parameter description

Step 3 Click Save.

#### An Example of Configuring IP Address with ARP/Ping

- <u>Step 1</u> To obtain a usable IP address, make sure that the Device and your PC are in the same LAN.
- <u>Step 2</u> Get the MAC address from the Device label.
- <u>Step 3</u> Open command editor on the PC and enter the following command. See Table 5-13.

System	Command
Windows syntax	arp -s <ip address=""> <mac></mac></ip>
	ping -I 480 -t < IP Address >
	Example:
	arp -s 192.168.1.125 11-40-8c-18-10-11
	ping -l 480 -t 192.168.0.125
	arp -s <ip address=""> <mac></mac></ip>
UNIX/Linux/Mac	ping -s 480 < IP Address >
syntax	Example:
Syntax	arp -s 192.168.1.125 11-40-8c-18-10-11
	ping -s 480 192.168.0.125
	netsh i i show in
	netsh -c "i i" add neighbors ldx <ip address=""> <mac></mac></ip>
	ping -I 480 -t < IP Address >
Win7 syntax	Example:
win/ syntax	netsh i i show in
	netsh -c "i i" add neighbors 12 192.168.1.125
	11-40-8c-18-10-11
	ping -I 480 -t 192.168.1.125

Table 5-13 Command lists

Step 4 Power off the Device and then restart it, or restart the Device over the network.

<u>Step 5</u> Check the PC command line. If there is information such as "Reply from 192.168.1.125...", it means the configuration succeeds. In this case, you can close the command editor.

<u>Step 6</u> Enter *http://<IP address>* in the browser address bar to log in.

### 5.2.2 Port

Configure the maximum port numbers and values on this interface.

#### <u>Step 1</u> Select Setting > Network > Port.

The **Port** interface is displayed. See Figure 5-37.

		-
Port		
Max Connection	10	(1~20)
TCP Port	37777	(1025~65534)
UDP Port	37778	(1025~65534)
HTTP Port	80	]
RTSP Port	554	]
HTTPS Port	443	]
	Default Re	fresh Save

Figure 5-37 Port interface

<u>Step 2</u> Configure each port value of the Device. For details, see Table 5-14.

- Except Max Connection, modifications of other parameters will take effect after restart.
- 0–1024, 1900, 3800, 5000, 5050, 9999, 37776, 37780–37880, 39999, and 42323 are occupied for specific uses.
- It is not recommended to use the default values of other ports during port configuration.

Parameter	Description
Max	The maximum number of users that can log in to the web interface of the
Connection	Device simultaneously. The value ranges from 1 to 10, and it is 10 by default.
TCP Port	TCP service port. The value is 37777 by default. You can set this parameter
	as needed.
UDP Port	User Datagram Protocol port. The value is 37778 by default. You can set this
	parameter as needed.
HTTP Port	HTTP communication port. The value is 80 by default. You can set this
	parameter as needed.

Table 5-14 Port parameter description

Step 3 Click Save.

### 5.2.3 PPPoE

You can enable PPPoE (Point-to-Point Protocol over Ethernet) to establish network connection. In this case, the Device obtains a dynamic IP address. To use this function, you need to obtain the PPPoE username and password from the Internet Service Provider (ISP).

#### <u>Step 1</u> Select Setting > Network > PPPoE.

The **PPPoE** interface is displayed. See Figure 5-38.

#### Figure 5-38 PPPoE interface (1)

PPPoE	
Enable	
Username	none
Password	
	Default Refresh Save

<u>Step 2</u> Select **Enable**, and then enter PPPoE username and password.

#### Step 3 Click Save.

**Save Succeeded!** is displayed, and the obtained IP address of public network is displayed in real time. See Figure 5-39. You can access the Device through the IP address.

Figure	5-39	PPPoE	interface	(2)
--------	------	-------	-----------	-----

PPPoE	
Enable	
Username	public
Password	•••••
	Default Refresh Save

### 5.2.4 DDNS

Properly configure DDNS, and then the domain name on the DNS server matches your IP address and refresh the matching relation in real time. You can always access your device with the same domain name no matter how much your device IP address changes. Before making any changes, check whether your device supports the DNS server.

- The third party servers might collect your device information if DDNS is enabled.
- Register and log in to the DDNS website, and then you can view the information of all the connected cameras in your account.

#### <u>Step 1</u> Select Setting > Network > DDNS.

The **DDNS** interface is displayed. See Figure 5-40.

	-	
DDNS		
🖌 Туре	NO-IP DDNS 🗸	After enabling DDNS function, third-party server may collect your device info.
Address	dynupdate.no-ip.com	
Domain Nam	e none	test
Username	none	
Password	••••	
Interval	1440	Min.(1440~2880)
	Default	fresh Save

Figure 5-40 DDNS

# <u>Step 2</u> Select **Type**, and then configure the parameters as needed. For details, see Table 5-15.

Parameter	Description	
Туре	The name and website of the DDNS service provider. Here is the matching	
Server address	<ul> <li>relationship:</li> <li>CN99 DDNS Server address: www.3322.org</li> <li>NO-IP DDNS Server address: dynupdate.no-ip.com</li> <li>Dyndns DDNS</li> </ul>	
	Server address: members.dyndns.org	
Domain Name	The domain name you registered on the DDNS website.	
Username	Enter the username and password obtained from DDNS service provider.	
Password	You need to register an account (including username and password) on the website of DDNS service provider.	
Interval	The update cycle of the connection between your device and the server, and the time is 10 minutes by default.	

Step 3 Click Save.

Open the browser, enter the domain name in the address bar, and then press the Enter key. The login interface is displayed.

### 5.2.5 SMTP (Email)

After this function is enabled, the device data will be sent to the given server. There is data leakage risk. Think twice before enabling the function.

Configure **SMTP (Email)**. When alarms, video detection and abnormal events are triggered, an email will be sent to the recipient server through SMTP server. The recipient can log in to the incoming mail server to receive emails.

<u>Step 1</u> Select Setting > Network > SMTP (Email).

The **SMTP (Email)** interface is displayed. See Figure 5-41.

SMTP(Email)	
SMTP Server	none
Port	25
Anonymity	
Username	anonymity
Password	••••
Sender	none
Authentication	TLS
Title	Message Attachment
Mail Receiver	+
Health Mail	Update Period 60 s(1~3600)
	Test
	Default Refresh Save

<u>Step 2</u> Configure parameters as needed. For parameter description, see Table 5-16.

Table 5-16 SMTP (Email) parameter description

Parameter	Description				
SMTP Server	IP address of the outgoing mail server				
SIVITE Server	complying with SMTP protocol.				
	Port number of the outgoing mail server				
Port	complying with SMTP protocol. It is 25 by	For	the		detailed

126	smtp.126.com	_	25	You need to enable SMTP service in your mailbox.

Table 5-17 Common email configuration description

Step 3 Click Save.

### 5.2.6 UPnP

After UPnP is enabled, Intranet service and port of the Device will be mapped to Extranet. Think twice before enabling it.

UPnP (Universal Plug and Play) allows you to establish the mapping relationship between Intranet and Extranet. Extranet users can access Intranet device by visiting Extranet IP address. Intranet port is device port and Extranet port is router port. Users can access the Device by accessing Extranet port. When you are not using routers for UPnP, disable UPnP to avoid affecting other functions.

Once UPnP is enabled, the Device supports UPnP protocol. In Windows XP or Windows Vista, after UPnP is enabled, the Device can be automatically searched by Windows network.

Perform the following steps to add UPnP network service in the Windows system.

- Step 1 Open Control Panel, and select Add or Remove Programs.
- Step 2 Click Add/Remove Windows Components.
- <u>Step 3</u> Select **Network Service** from the **Windows Components Wizard** and click **Details** button.
- <u>Step 4</u> Select Internet Gateway Device Discovery and Control Client, and UPnP User Interface, and then click OK to start installation.

Perform the following steps to configure UPnP:

<u>Step 1</u> Select **Setting > Network > UPnP**.

The **UPnP** interface is displayed. See Figure 5-42.

Figure 5-42 UPnP

Port Mapping List	Service Name	Protocol	Internal Port	External Port	Status	Modify
	HTTP	WebService:TCP	80	8080	Mapping Failed	
	TCP	PrivService:TCP	37777	37777	Mapping Failed	1
	UDP	PrivService UDP	37778	37778	Mapping Failed	1
X	RTSP	RTSPService:TCP	554	554	Mapping Failed	1

- Step 2 Select Enable.
- Step 3 Select a mode from the drop-down list.

There are 2 mapping modes: **Custom** and **Default**. In **Custom** mode, users can modify the external port. Select **Default**, and then the system finishes mapping with unoccupied port automatically. In this case, you do not need to modify mapping relation.

<u>Step 4</u> Select Start Device Discover as needed.

Step 5 Click Save.

### 5.2.7 SNMP

SNMP (Simple Network Management Protocol) is a basic network management framework. You need to install certain software to the Device to obtain the configuration information of the Device.

The following requirements must be satisfied if you want to use SNMP function:

- Install SNMP monitoring and managing tools, such as MIB Builder and MG-SOFT MIB ٠ Browser.
- Obtain two MIB files corresponding to the current version from the technical personnel. •

#### <u>Step 1</u> Select Setting > Network > SNMP.

The **SNMP** interface is displayed. See Figure 5-43 and Figure 5-44.

SNMP			
Version	🗌 v1	🗌 v2	v3 (Recommen
SNMP Port	161	(1~6553	35)

	Default	Refre	esh		Save	

Figure 5-44 SNMP (2)

<u>Step 2</u> Select a version to enable SNMP.

In the **Trap Address** field, enter the IP address of the PC that has MG-SOFT MIB Browser installed, leaving other parameters to the default values.

Parameter	Description
Version	<ul> <li>Select the check box of the version you need, and the system can process information of the corresponding version.</li> <li>Select V1, and the system can only process information of V1 version.</li> <li>Select V2, and the system can only process information of V2 version.</li> <li>Select V3, and then V1 and V2 become unavailable. You need to set the username, password, and authentication type to visit your device from the server.</li> <li>V1 and V2 might cause data leakage, and V3 is recommended.</li> </ul>
SNMP Port	The listening port of the software agent in the Device.

Parameter	Description
Read Community/Write	The read and write community strings that the software agent supports.
Community	The name can only consist of number, letter, underline (_), and strikethrough (-).
Trap Address	The target address of the trap information sent by the software agent in the Device.
Trap Port	The target port of the trap information sent by the software agent in the Device.
Keep Alive	Select the <b>Keep Alive</b> check box, and the system can send data package to ensure network connection without interruption.
Read-only Username	The name is <b>public</b> by default.
	The username can only consist of number, letter, and underline.
Read&write Username	The name is <b>private</b> by default.
Usemane	The username can only consist of number, letter, and underline.
Authentication Type	You can select from <b>MD5</b> and <b>SHA</b> , and it is <b>MD5</b> by default.
Authentication	It shall be no loss than 9 digits
Password	It shall be no less than 8 digits.
Encryption Type	It is CBC-DES by default.
Encryption Password	It shall be no less than 8 digits.

Step 3 Click Save.

Step 4 View device information.

- 1) Run MIB Builder and MG-SOFT MIB Browser.
- 2) Compile the two MIB files with MIB Builder.
- 3) Load the generated modules with MG-SOFT MIB Browser.
- 4) Enter the IP address of the Device you need to manage in the MG-SOFT MIB Browser, and then select version to search.
- 5) Expand all the tree lists displayed in the MG-SOFT MIB Browser, and then you can view the configuration information, video channel amount, audio channel amount, and software version.

Use PC with Windows operating system (OS) and disable SNMP Trap service. The MG-SOFT MIB Browser will display prompt when an alarm is triggered.

### 5.2.8 Bonjour

Bonjour is also called zero-configuration networking, which can automatically discover computers, devices and services on IP networks. Bonjour is a protocol of industry standard which allows devices to search and find each other. IP address or DNS server is not required during the process.

Enable this function, and the network camera will be automatically detected by the OS and client with Bonjour function. When the network camera is automatically detected by Bonjour, server name you have set will be displayed.

#### <u>Step 1</u> Select **Setting > Network > Bonjour**.

The **Bonjour** interface is displayed. See Figure 5-45.

#### Figure 5-45 Bonjour interface

Bonjour			
_			
Enable			
Server Name	accessive waters		
	Default	Refresh	Save

<u>Step 2</u> Select Enable, and then set Server Name.

Step 3 Click Save.

In the OS and clients that support Bonjour, perform the following steps to visit the web interface of the Device with Safari browser.

- Step 1 Click Show all bookmarks in Safari.
- <u>Step 2</u> The OS or client automatically detects the network cameras with Bonjour enabled in the LAN.
- <u>Step 3</u> Click to visit the corresponding web interface.

### 5.2.9 Multicast

Access the Device by network to see live view. If the access times exceed its upper limit, preview might fail. You can set multicast IP to access by multicast protocol to solve the problem. The Device supports two multicast protocols: **RTP** and **TS**. RTP is enabled by default when main stream and sub stream are used. TS is disabled by default.

#### 5.2.9.1 RTP

#### <u>Step 1</u> Select Setting > Network > Multicast > RTP.

The **RTP** interface is displayed. See Figure 5-46.

Figure 5-46 RTP interface

?

Step 2 Enable main stream or sub stream as needed.

<u>Step 3</u> Enter multicast address and port number.

### 5.2.9.2 TS

<u>Step 1</u> Select **Setting > Network > Multicast > TS**. The **TS** interface is displayed. See Figure 5-47.

Figure 5-47 TS interface

Main Stream		Sub Stream		
Enable		Enable	Sub Stream 1	
Multicast Address	(224.0.0.0~239.255.255.255)	Multicast Address	(224.0.0.0~239.255.255.255)	
Port	20000 (1025~65500)	Port	20016 (1025~65500)	
	Default Refresh	Save		

<u>Step 3</u> Enter multicast address and port number.

Step 4 Click Save.

### 5.2.10 Auto Register

After you enable this function, when the Device is connected to Internet, it will report the current location to the specified server which acts as the transit to make it easier for the client software to access the Device.

#### <u>Step 1</u> Select Setting > Network > Auto Register.

The Auto Register interface is displayed. See Figure 5-48.

Figure 5-48 Auto register

Auto Register	
Enable	
IP Address	0.0.0.0
Port	7000
Sub-Device ID	none
	Default Refresh Save

<u>Step 2</u> Select the **Enable** check box to enable **Auto Register**.

Step 3 Enter IP Address, Port and Sub-Device ID. For details, see Table 5-19.

Table 5-19 Auto register parameter description

Parameter	Description
IP Address	The IP address of server that needs to be registered to.
Port	The port for auto-registration.
Sub-Device ID	Sub device ID assigned by server.

Step 4 Click Save.

### 5.2.11 Wi-Fi

Devices with Wi-Fi function can access network through Wi-Fi.

- Wi-Fi and WPS are available on select models.
- All devices with WPS button support WPS function.

#### 5.2.11.1.1 Wi-Fi

The name, status and IP information of current hotspot are displayed in the Wi-Fi information bar. Click **Refresh** after reconnection to make sure that the operating status is displayed in real time. Connecting Wi-Fi hotspot takes some time depending on network signal strength. For Wi-Fi configuration interface, see Figure 5-49.

Figure 5-49	Wi-Fi interface
-------------	-----------------

Enable				Add SSID Search SSI
ID List	SSID	Connect mode	Authorize Mode	Signal Quality
	3310	Connect mode	Authonze Mode	Signal Quality
Wifi Info				
SSID				
SSID IP Address				
Wifi Info SSID IP Address Subnet Mask Gateway				

Perform the following steps to configure Wi-Fi.

<u>Step 1</u> Select the **Enable** check box.

<u>Step 2</u> Click **Search SSID**, and Wi-Fi hotspots in the environment of current network camera are displayed. See Figure 5-50.

Figure	5-50	Wi-Fi	setting
--------	------	-------	---------

nable				Add SSID Search SS

Address (#1999) and				
onet Mask				
nteway and a set of a				

<u>Step 3</u> To manually add Wi-Fi, click **Add SSID**, and the **Add WiFi** interface is displayed. See Figure 5-51.

<u>Step 4</u> Enter a network name in the dialog box.

It is recommended to set a secure encryption method for the Device to connect routers.

Figure 5-51 Adding Wi-Fi

Add WIFI		×
SSID		
	OK Cancel	

- <u>Step 5</u> Double-click one hotspot to display the **Signal Quality** and the **Authentication Manner**.
  - If the password is required, enter it. When entering the password, its index number shall be consistent with that on the router.
  - Click **Connection** if password is not required.

#### 5.2.11.1.2 WPS

For WPS configuration interface, see Figure 5-52.

Figure 5-52 WPS setting

WIFI	WPS
<ul> <li>Enter PIN</li> <li>PIN</li> <li>SSID</li> </ul>	
O Button	
Status	Connected
	Connection Refresh

PIN and SSID can be obtained from the router. Enter PIN and SSID, and then click **Refresh** to display operating status in real time.

### 5.2.12 802.1x

802.1x is a port-based network access control protocol. It allows users to manually select authentication mode to control device access to LAN, and meet authentication, billing, safety and management requirements of the network.

<u>Step 1</u> Select Setting > Network > 802.1x.

The **802.1x** interface is displayed, see Figure 5-53.

	Figure 5-53 802.1x interface
802.1x	
Enable	
Authentication	PEAP V
Username	none
Password	••••
	Default Refresh Save

<u>Step 2</u> Select the **Enable** check box to enable **802.1x**.

<u>Step 3</u> Select an authentication mode, and enter username and password. For parameter description, see Table 5-20.

Parameter	Description
Authentication	PEAP (protected EAP protocol).
Username	The username that was authenticated on the server.
Password	Corresponding password.

Step 4 Click Save.

### 5.2.13 QoS

QoS (Quality of Service) is a network security mechanism, and is also a technology to solve network delay, congestion, and other problems. For network business, QoS includes transmission bandwidth, time delay in transmission, and packet loss of data. In network, QoS can be improved by ensuring transmission bandwidth, and reducing time delay in transmission, packet loss rate, and delay jitter.

For DSCP (Differentiated Services Code Point), there are 64 priority degrees (0–63) of data packets. 0 represents the lowest priority, and 63 the highest priority. Based on the priority, the packets are classified into different groups. Each group occupies different bandwidth and has different discard percentage when there is congestion so as to improve service quality.

#### <u>Step 1</u> Select Setting > Network > QoS.

The **QoS** interface is displayed. See Figure 5-54.

Figure 5-54 QoS interface

QoS			
Realtime Monitor	0	(0-62)	
Realime Monitor	0	(0~63)	
Command	0	(0~63)	
	Default	Refresh	Save

## <u>Step 2</u> Configure **Realtime Monitor** and **Command**. For parameter description, see Table 5-21.

Parameter	Description
Realtime Monitor	Data packet of network video monitoring. The value ranges from 0 to 63.
Command	Data packet of device configuration and query. The value ranges from 0 to 63.

Table 5-21 QoS setting parameter description

Step 3 Click Save.

### 5.2.14 4G

### 5.2.14.1 Dialing Setting

Log in to web interface, select **Setting > Network > 4G > Dialing Setting** and the **Dialing Setting** interface is displayed. See Figure 5-55.

▶ Camera	Dialing Setting Mobile Settings	
▼ Network		
> TCP/IP	Wireless Net Type Auto   Enable

System		
► Information		

Figure 5-55 Dialing setting interface

Some devices only support certain mobile carriers, and only the supported carriers are

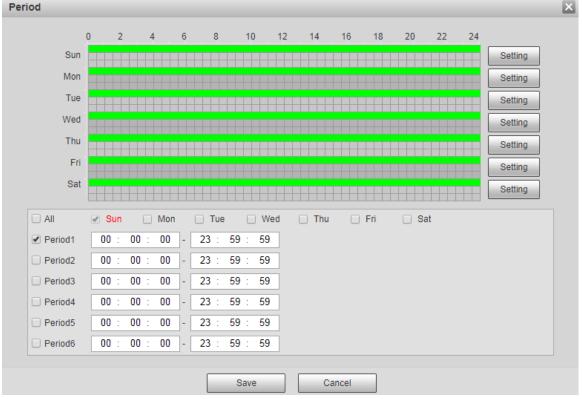

displayed in Network Support.

<u>Step 1</u> Select the **Enable** check box.

<u>Step 2</u> Enter **APN**, **Authorize Mode**, **Dial-up Number**, **Username**, and **Password** according to the SIM card inserted.

These parameters might vary by countries. Contact local carrier or customer service for details.

- Step 3 Set the period to use 4G. See Figure 5-56.
  - - If the current time is in the period you set, 4G network connection will be enabled. The IP address of the SIM card will be displayed in IP Address. And you can access the device through 4G after finishing the rest steps.
    - If the current time is not in the period you set, 4G network connection will not be enabled. Only the corresponding Wireless Signal is displayed on the interface. And you cannot access the device through 4G.
       Figure 5-56 Period setting

<u>Step 4</u> Set the interval to enable 4G through message or phone call if you want to use 4G outside the period set in Step 3.

The value range is 0–7200 s and it is 30 s by default. If the interval is 30 s, after activating 4G, you can use it for 30 s. After 30 s, you need to activate 4G again. If you set the interval to 0 s, you can use 4G without disconnection and you do not need to activate it again. For the method to activate 4G through message or phone call, see "4.2.12.2 Mobile Setting."

Step 5 Click Save.

### 5.2.14.2 Mobile Setting

Log in to web interface, select **Setting > Network > 4G > Mobile Settings**, and the **Mobile Setting** interface is displayed. See Figure 5-55.

You can add the phone number to receive alarms. You also can add phone number used to activate 4G through message or phone call if you want to use 4G outside the period set in Step 3 of "5.2.14.1 Dialing Setting." See Figure 5-57.

Dialing Setting Mobile Settings Camera Message Send Message Activation Phone Activation > TCP/IP Receiver + Sender Caller + + > Port > PPPoE 100000000 --1000000000 110000-000 > DDNS The phone number used to send activation message The phone number used to receive alarm The phone number used to > SMTP(Email) > UPnP make activation message > SNM > Boniou > Multicast Title Event Message > 802.1x > QoS > Access Platfor Default Refresh Save PTZ Event Storage System

Figure 5-57 Mobile setting interface

- **Message Send**: When alarms are triggered, the phone number added will receive message.
- Message Activation: You can enable 4G through message outside the period you set to use 4G. You need to send "ON" or "OFF" to phone number of the SIM card in the Device.
   "ON" indicates and "OFF" indicates disabling.
- **Phone Activation**: You can enable 4G through phone calls outside the period you set to use 4G. You need to call the phone number of the SIM card in the Device. If the call gets through, it means 4G has been enabled.
- Make sure that your SIM card supports making phone calls and sending messages, and it can be used normally.
- Make sure that you use activation function outside the time range you set; otherwise it does not work.
- <u>Step 1</u> Select the check box of the service you need to enable. You can select one or more services.
- Step 2 Enter the phone number and click 🕒 to add it.
- Step 3 Click Save.

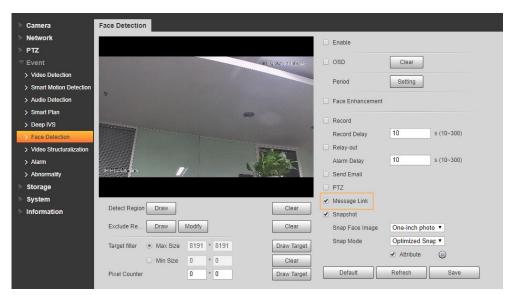

Informat

 $\square$ 

<u>Step 4</u> Select the **Message Link** check box on the interface of the event for which you want to receive message.

Take Face Detection for example. Click **Setting > Event > Face Detection** and select the **Message Link** check box.

Figure 5-58 Message link

<u>Step 5</u> Click **Save** on the interface of the corresponding event. And you will receive message if the alarm is triggered.

### 5.2.15 Access Platform

### 5.2.15.1 P2P

P2P is a private network traversal technology which enables users to manage devices easily without requiring DDNS, port mapping or transit server. Scan the QR code with your smart phone, and then you can add and manage more devices on your mobile client.

<u>Step 1</u> Select Setting > Network > Access Platform > P2P.

The **P2P** interface is displayed.

Figure 5-59 P2P interface			
P2P	ONVIF		
Enable			
After enabling	g the function and connecting Internet, we will collect device information		
	ddress, MAC address, name and serial number. The collected		
	s only used for remote access of the device. If you do not agree to		
enable the fu	nction, please cancel the selection of check box.		
Status	Offline		
S/N	STRENGTH, OCH		
QR Code	Scan the QR code on the interface		
	Default Refresh Save		

- P2P is enabled by default. You can manage the devices remotely.
- When P2P is enabled and the device is connected to network, the status is displayed as **Online**. We might collect the information including IP address, MAC address, device name, and serial number. The information collected is for remote access only. If you do not agree with this, you can clear the **Enable** check box.
- <u>Step 2</u> Log in to mobile phone client and tap **Device Management**.
- <u>Step 3</u> Tap Add + at the upper-right corner.
- <u>Step 4</u> Scan the QR code on the P2P interface.
- <u>Step 5</u> Follow the instructions to finish settings.

### 5.2.15.2 ONVIF

The ONVIF authentication is **On** by default, which allows the network video products (including video recording device and other recording devices) from other manufacturers to connect to the Service.

ONVIF is enabled by default.

<u>Step 1</u> Select Setting > Network > Access Platform > ONVIF.

The **ONVIF** interface is displayed. See Figure 5-60.

Figure 5-60 ONVIF interface

P2P	ONVIF		
Authentication	● On 〇 Off		
	Default	Refresh	Save

86

<u>Step 2</u> Select **On** for **Authentication**. <u>Step 3</u> Click **Save**.

### 5.2.15.3 RTMP

You can connect the third party platforms (such as YouTube) to play live video through RTMP protocol.

- Only admin user can configure RTMP.
- RTMP only supports H.264, H.264B and H.264H video formats, and Advanced Audio Coding (AAC) audio format.

<u>Step 1</u> Select Setting > Network >Access Platform > RTMP.

The **RTMP** interface is displayed. See Figure 5-61.

Figure 5-61 RTMP interface

P2P	ONVIF	RTMP	
Enable Stream Type	Main Stream	O Sub Stream 1	O Sub Stream 2
Address Type IP Address	Non-custom		
Port Custom Address	+656	(0~65535	))
	Default	Refresh	Save

<u>Step 2</u> Select the **Enable** check box, and RTMP will be enabled.

When enabling RTMP, make sure that the address can be trusted.

<u>Step 3</u> Set parameters. For details, see Table 4-20.

Table 5-22 RTMP parameter setting description

Parameter	Description		
Stream Tune	Select live video stream type. Make sure that the video format of the		
Stream Type	stream is H.264, H.264B or H.264H, and the audio format is AAC.		
	There are two options: Non-custom and Custom.		
Address Type	Non-custom: You need to fill in the IP address or domain name.		
	Custom: You need to fill in the address allocated by the server.		
IP Address	If you have selected <b>Non-custom</b> , IP address and port need to be filled in.		
Dant	IP Address: IPv4 or domain name is supported.		
Port	Port: It is recommended to use the default value.		

Parameter	Description
Custom	If you have selected Custom, the address allocated by the server needs
Address	to be filled in.

Step 4 Click Save.

## 5.3 PTZ Settings

### 5.3.1 Protocol

Network PTZ setting and analog PTZ setting are available on select models.

### 5.3.1.1 Network PTZ Settings

#### <u>Step 1</u> Select Setting > PTZ > Protocol > Network PTZ.

The Network PTZ interface is displayed. See Figure 5-62.

Figure 5-62 Network PTZ setting

		•	•		
N	etwork PTZ	Analog PTZ			
	Protocol	PELCOD	~		
		Default	Refresh	Save	
<u>Step 2</u>	Select a protocol	as needed. You can se	elect DH-SD1, DH-	SD3, PELCOD, or	r PELCOP.
	DH-SD1 is selecte	ed by default.			
	DH-SD1 protocol	supports up to 80 pre	esets, and DH-SD3	B protocol supports	s up to 300
	presets.				

Step 3 Click Save.

### 5.3.1.2 Analog PTZ Settings

<u>Step 1</u> Select Setting > PTZ > Protocol > Analog PTZ. The Analog PTZ interface is displayed. See Figure 5-63.

Figure 5-63 Analog PTZ setting

		<b>U</b>	
Network PTZ	Analog PTZ		
Address	1		
Baud Rate	9600	~	
Data Bit	8	$\sim$	
Stop Bit	1	$\sim$	
Parity	NONE	$\sim$	
	Default	Refresh	Save

<u>Step 2</u> Configure parameters as needed. See Table 5-23.

Table 5-23 Analog PTZ parameter description

Devenueter	Parameter Presidenter			
Parameter	Description			
Address	Enter the address of the Device.			
	Make sure that the address is the same as the device address; otherwise			
	you cannot control the device.			
Baud Rate	Select the baud rate of the Device.			
Data Bit	It is 8 by default.			
Stop Bit	It is 1 by default.			
Parity	It is <b>NONE</b> by default.			

Step 3 Click Save.

### 5.3.2 Function

### 5.3.2.1 Preset

Select **Setting > PTZ > Function > Preset**. The **Preset** interface is displayed. See Figure 5-64.

If you click Remove All, all presets and special presets will be cleared.

#### Figure 5-64 Preset settings

▶ Preset	Number	Preset Title	Save	÷
▶ Tour	1	Preset1		•
▶ PTZ Speed	2	Preset2		•
	Number	Special Preset Eurotion	Save C	all 🕂
▶ Delault	Tumber	opecial reset raneaon		
	The second second	Tour     1       PTZ Speed     2       Idle Motion     2       PowerUp     2       PTZ Limit     2       Time Task     2	Tour     1     Preset1       PTZ Speed     2     Preset2       Idle Motion         PowerUp         PTZ Limit         Time Task	1     Preset1       PTZ Speed       Idle Motion       PowerUp       PTZ Limit       Time Task       PTZ Restart

#### Preset

Preset means a certain position of the Device. Users can adjust the PTZ and camera to the location quickly through calling presets.

Step 1 At the lower left corner of the Preset interface, click the direction buttons,

speed 5, , , , and + to adjust the PTZ direction, speed, zoom, and focus of

the Device.

Step 2 Click 🔂 to add a preset.

The current position is set to a preset and is displayed in the list. See Figure 5-65 Figure 5-65 Adding presets

Number	Preset Title	Save	÷
1	Preset1		0
2	Preset2	-	•

Step 3 Click i to save the preset.

<u>Step 4</u> Perform operations on presets.

- Double-click the preset title to edit the title displayed on the monitoring screen.
- Click 
   to delete the preset.

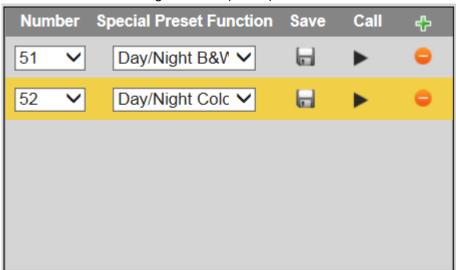

#### **Special Preset**

Special presets serve as the shortcut for some special functions switch or calling, and they no longer represent the location of the PTZ camera.

Step 1 Click 🗗 to add a special preset. The added special preset will be displayed in the list.

See Figure 4-60.

The number of special presets starts from 51 by default, and 100 is the largest number. Figure 5-66 Special presets

<u>Step 2</u> Click let to save the added special preset. <u>Step 3</u> Perform operations on special presets.

- Click Day/Night B&V 
   to modify the special preset function.
  - Click 🤜 to delete the special preset.

Click local the function configured for the special preset.

If the PTZ is restored to default settings, all preset configurations will be cleared, but the called function will remain.

#### 5.3.2.2 Tour

Tour means a series of movements that the Device makes along several presets.

You need to set several presets in advance.

<u>Step 1</u> Select **Setting > PTZ > Function > Tour**.

The **Tour** interface is displayed. See Figure 5-67.

Figure 5-67 Tour settings

Function		
2017-0A-10 10-18-01 Tue	<ul> <li>Preset</li> <li>Tour</li> <li>Scan</li> </ul>	Tour Mode Se Original Path  Tour No. Tour Name Delete
IF PTZ Donie	<ul> <li>Pattern</li> <li>Pan</li> <li>PTZ Speed</li> <li>Idle Motion</li> <li>PowerUp</li> <li>PTZ Limit</li> </ul>	
Speed 5 ▼	<ul> <li>Time Task</li> <li>Intelligence</li> <li>PTZ Restart</li> <li>Default</li> </ul>	Start Add Number Preset Duration Speed Delete
		+ Add P Save Refresh

<u>Step 2</u> Select the **Tour Mode** from **Original Path** and **Shortest Path**. **Original Path** is selected by default.

- Original Path: Tour in the order of adding presets.
- Shortest Path: Starting from the preset with largest horizontal zoom value and vertical zoom value, pass all presets in the tour to ensure the shortest path. The Device reaches the corresponding preset and ensure the minimum number of rotation.
- <u>Step 3</u> Click **Add** at the bottom of the list at the upper right corner of the interface to add a tour path.
- <u>Step 4</u> Click **Add** at the bottom of the list at the lower right corner of the interface to add several presets.
- <u>Step 5</u> Perform tour operations.
  - Double-click tour name to edit the name of the corresponding tour.
  - Double-click duration to set the time that the Device stays at the corresponding preset.
  - Double-click speed to modify the tour speed. The default value is 7, and the value range is 1–10. The larger the value, the faster the speed.
- <u>Step 6</u> Click **Start** to start the tour.

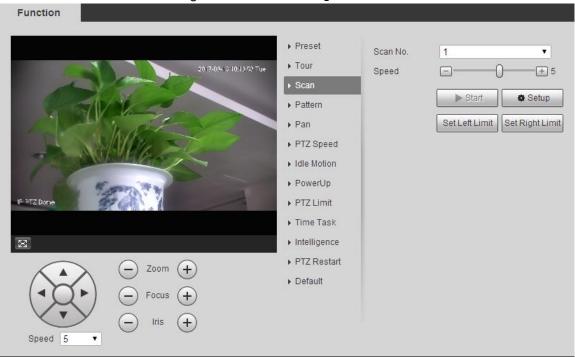

The ongoing tour stops if any operation is made to the PTZ.

#### 5.3.2.3 Scan

Scan means the Device moves horizontally at a certain speed between the defined left and right limits.

<u>Step 1</u> Select Setting > PTZ > Function > Scan.

The **Scan** interface is displayed. See Figure 5-68. Figure 5-68 Scan settings

- <u>Step 2</u> Select the Scan No.
- <u>Step 3</u> Drag the slider to adjust the scan speed.
- <u>Step 4</u> Click **Setup** to adjust the Device to an ideal position.
- <u>Step 5</u> Click **Set Left Limit** and **Set Right Limit** to set the left and right boundaries of the Device.
- <u>Step 6</u> Click **Start**, and the Device starts scanning.
- <u>Step 7</u> Click **Stop**, and the scanning stops.

#### 5.3.2.4 Pattern

Pattern means a record of a series of operations that users make to the Device. The operations include horizontal and vertical movements, zoom and preset calling. Record and save the operations, and then you can call the pattern path directly.

#### <u>Step 1</u> Select Setting > PTZ > Function > Pattern.

The **Pattern** interface is displayed. See Figure 5-69.

#### Figure 5-69 Pattern settings

- <u>Step 2</u> Select the **Pattern No**.
- <u>Step 3</u> Click **Setup** and **Start Rec**, and then operate the PTZ as needed.
- <u>Step 4</u> Click **Stop Rec** to stop recording.
- Step 5 Click Start, and the Device starts patterning.
- <u>Step 6</u> Click **Stop**, and the patterning stops.

#### 5.3.2.5 Pan

Pan refers to the continuous 360° rotation of the Device at a certain speed.

<u>Step 1</u> Select Setting > PTZ > Function > Pan.

The **Pan** interface is displayed. See Figure 5-70.

Figure 5-70 Pan settings

<u>Step 2</u> Drag the slider to set the **Pan Speed**.

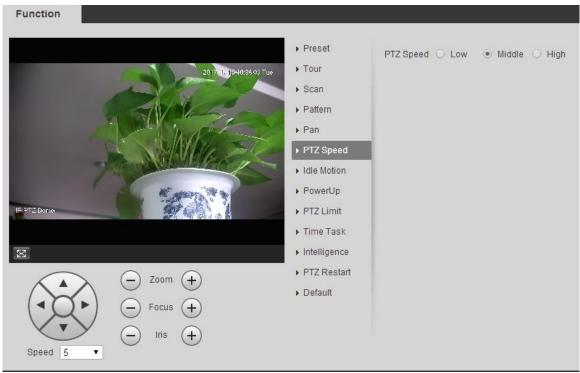

<u>Step 3</u> Click **Start**, and the Device starts to rotate horizontally at this speed.

### 5.3.2.6 PTZ Speed

PTZ speed is the automatical running speed of the Device when touring, patterning, or auto tracking.

#### <u>Step 1</u> Select Setting > PTZ > Function > PTZ Speed.

The **PTZ Speed** interface is displayed. See Figure 5-71.

#### <u>Step 2</u> Select **Low**, **Middle** or **High**. The PTZ will operate at this speed.

### 5.3.2.7 Intelligence

Set the duration of intelligent tracking.

<u>Step 1</u> Select Setting > PTZ > Function > Intelligence.

The Intelligence interface is displayed. See Figure 5-72.

#### Figure 5-72 Intelligence settings

runction					
	20 7649 3-10.20.20	<ul> <li>▶ Preset</li> <li>Tour</li> <li>▶ Scan</li> </ul>	Auto Track	10	Sec. (5~300)

	<ul> <li>→ Zoom +</li> <li>→ Focus +</li> <li>→ Iris +</li> </ul>	Time Task Intelligence PTZ Restart Default			
Speed 5					

Step 2 Select the Enable check box, and intelligent tracking is enabled.

<u>Step 3</u> Enter the duration of intelligent tracking.

Step 4 Click Save.

Eunction

The function is available on select models.

#### 5.3.2.8 Idle Motion

Idle motion refers to a set motion when the Device does not receive any valid command within a certain period.

 $\square$ 

Set Preset, Tour, Scan or Pattern in advance.

<u>Step 1</u> Select Setting > PTZ > Function > Idle Motion.

The Idle Motion interface is displayed. See Figure 5-73.

Figure 5-73 Idle motion settings

<u>Step 2</u> Select the **Enable** check box to enable the idle motion.

<u>Step 3</u> Select idle motion from **Preset**, **Tour**, **Scan** and **Pattern**.

- <u>Step 4</u> Select the action number of the selected motion.
- <u>Step 5</u> Set **Idle Time** for the selected motion.
- Step 6 Click Save.

### 5.3.2.9 PowerUp

PowerUp means the automatic operation of the Device after it is powered on.

Set Preset, Tour, Scan or Pattern in advance.

<u>Step 1</u> Select Setting > PTZ > Function > PowerUp.

The **PowerUp** interface is displayed. See Figure 5-74.

#### Figure 5-74 PowerUp settings

- <u>Step 2</u> Select the **Enable** check box to enable power up motion.
- Step 3 Select power up motion from **Preset**, **Tour**, **Scan**, **Pattern** or **Auto**.

Select **Auto** and the last motion before you shut down the Device last time will be performed.

- <u>Step 4</u> Select the action number of the selected motion.
- Step 5 Click Save.

### 5.3.2.10 PTZ Limit

After setting the PTZ limit, the Device can only move in the set area.

<u>Step 1</u> Select Setting > PTZ > Function > PTZ Limit.

The PTZ Limit interface is displayed. See Figure 5-75.

#### Figure 5-75 PTZ limit settings

T unotion		
All first (2+10/25/3) Ture         Bit (2:10-10/25/3) Ture	<ul> <li>Preset</li> <li>Tour</li> <li>Scan</li> <li>Pattern</li> <li>Pan</li> <li>PTZ Speed</li> <li>Idle Motion</li> <li>PowerUp</li> <li>PTZ Limit</li> <li>Time Task:</li> <li>Intelligence</li> <li>PTZ Restart</li> <li>Default</li> </ul>	Enable Up Line Setting Live Down Line Setting Live Please enable Coordinates at Overlay function to see PTZ Coordinates on video.

- <u>Step 2</u> Adjust the PTZ direction and click **Setting** to set the **Up Line**.
- <u>Step 3</u> Adjust the PTZ direction and click **Setting** to set the **Down Line**.
- <u>Step 4</u> Click Live to preview the already-set up line and down line.
- <u>Step 5</u> Select the **Enable** check box to enable the PTZ limit function.

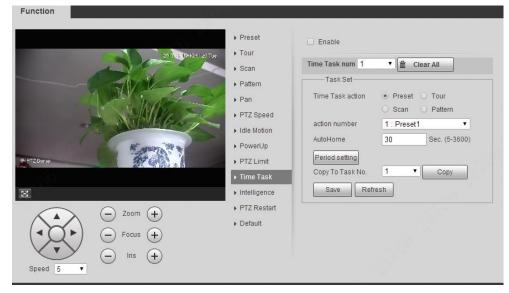

#### 5.3.2.11 Time Task

After setting time task, the Device performs the selected motions during the set period.

#### Set Preset, Tour, Scan or Pattern in advance.

<u>Step 1</u> Select Setting > PTZ > Function > Time Task.

The **Time Task** interface is displayed. See Figure 5-76. Figure 5-76 Time task settings

- <u>Step 2</u> Select the **Enable** check box to enable time task function.
- <u>Step 3</u> Set the time task number.

 $\square$ 

Click Clear All to delete all set time tasks.

- <u>Step 4</u> Select **Time Task** action such as **Preset**, **Tour**, **Scan** or **Pattern**.
- <u>Step 5</u> Select the action number of the selected motion.

Step 6 Set the time for AutoHome.

AutoHome refers to the time needed to automatically recover the time task in case of manually calling the PTZ to stop the time task.

- <u>Step 7</u> Click **Period setting** to set the period to perform time tasks.
- <u>Step 8</u> Select the task number to copy settings to the selected task, and then click **Copy**.
- Step 9 Click Save.

### 5.3.2.12 PTZ Restart

Restart the PTZ. Follow these steps to complete the configuration.

<u>Step 1</u> Select Setting > PTZ > Function > PTZ Restart.

```
The PTZ Restart interface is displayed. See Figure 5-77.
```

#### Figure 5-77 PTZ restart

Step 2 Click **PTZ Restart**. The PTZ is restarted.

### 5.3.2.13 Default

Restore the PTZ to factory defaults.

This function will restore the Device to defaults. Think twice before performing the operation.

<u>Step 1</u> Select Setting > PTZ > Function > Default.

The **Default** interface is displayed. See Figure 5-78.

#### Figure 5-78 Default setting

#### Step 2 Click Default.

The PTZ will be restored to factory defaults.

## 5.4 Event Management

### **5.4.1 Video Detection**

Video detection includes three event types: Motion Detection, Video Tamper and Scene Changing.

### 5.4.1.1 Motion Detection

When the moving object appears and moves fast enough to reach the preset sensitivity value, alarms will be triggered.

<u>Step 1</u> Select Setting > Event > Video Detection > Motion Detection.

The Motion Detection interface is displayed. See Figure 5-79.

lotion	Detection	Video Tamper	Scene Changing	
	Enable			
	Period	Setting		
	Anti-Dither	5	s (0~100)	
	Area	Setting		
$\checkmark$	Enable Manual	Con		
✓	Record			
	Record Delay	10	s (10~300)	
$\checkmark$	Relay-out	1 2		
	Alarm Delay	10	s (10~300)	
	Send Email			
	PTZ			
$\checkmark$	Snapshot			
		Default	Refresh	Save

Figure 5-79 Motion detection settings

<u>Step 2</u> Select the **Enable** check box, and then configure parameters as needed.

- Set arming and disarming period.
- 1) Click **Setting**, and then set the arming and disarming period on the interface. See Figure 5-80.

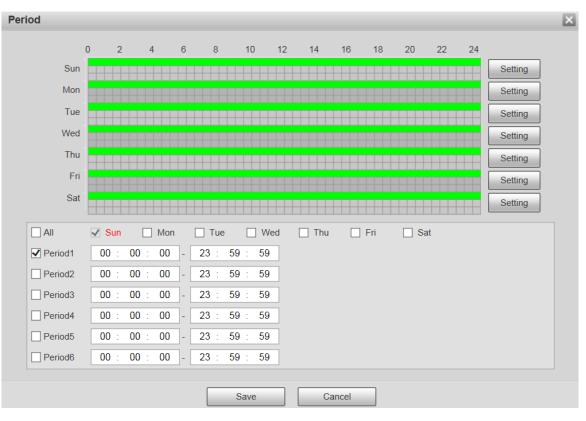

Figure 5-80 Arming and disarming period settings

 Set the alarm period to enable alarm events in the period you set. There are 6 time periods for each day. Select the check box for the time period to enable it.

Select the day of week (**Sunday** is selected by default; If **All** is selected, the setting is applied to the whole week. You can also select the check box next to the day to set it separately).

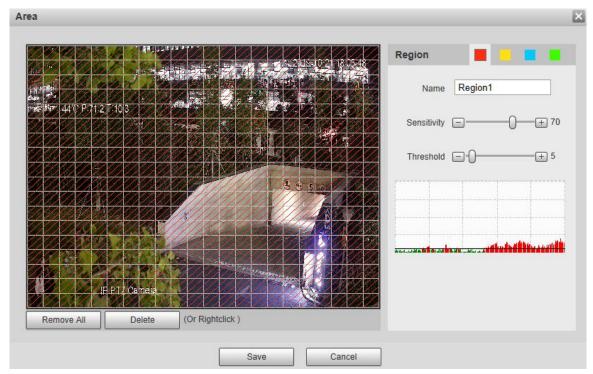

3) After completing the settings, click **Save**.

You will return to the Motion Detection interface.

Set the area.

Click **Setting**, and the **Area** interface is displayed. See Figure 5-81. Refer to Table 5-24 and Table 5-25 for parameters description. Each color represents a certain region, and you can set different motion detection regions for each area. The detection region can be irregular and discontinuous.

Figure 5-81 Area setting

#### Table 5-24 Area setting parameter description

ter Description		
The default names are Region1, Region2, Region3 and Region4, and the		
names can be customized.		
Sensitivity to brightness change. The higher the sensitivity is, the easier the		
motion detection event will occur.		
You can set different sensitivities for each region, with values ranging from 0		
to 100, and 30 to 70 is recommended.		
Detect the relation between the object and the region. The smaller the		
threshold is, the easier the motion detection will occur.		
Set different thresholds for each region, with values ranging from 0 to 100,		
and 1 to 10 is recommended.		
The red line indicates that motion detection is triggered, and the green line		
indicates that it is not triggered.		
Remove all detection regions.		
Delete the detection region of the selected color block.		
_		

Other parameters

### Table 5-25 Video detection parameter description

Parameter	Description
Anti-Dither The system records only one motion detection event within the defin	
	period. The value range is 0–100 s.
Enable	After you enable the function, the motion detection events that occur when
Manual	you control the PTZ manually will be excluded. In this way, you can reduce
Control	the false alarm rate of such events.
Trigger	

Parameter	Description
Record	After you enable the function, when an alarm is triggered, the system will start
	recording automatically. Before using the function, you need to set the
	recording period of the alarm in <b>Storage &gt; Schedule</b> , and select <b>Auto</b> for
	Record Mode on the Record Control interface.
Record	When the alarm is over, the alarm recording will continue for an extended
Delay	period of time. The time unit is second, and the value range is 10–300.
Relay-out	Select the check box, and you can enable the alarm linkage output port, and
	link corresponding relay-out devices after an alarm is triggered.
Alarm Delay	When the alarm is over, the alarm will continue for an extended period of
	time. The time unit is second, and the value range is 10–300.
Send Email	After you select the check box, when an alarm is triggered, the system sends
	email to the specified email address. You can configure the email address in
	"5.2.5 SMTP (Email)."
PTZ	Select <b>PTZ</b> , and then configure the linkage action. When an alarm is
	triggered, the system links PTZ to rotate to the preset. The Activation
	options include None, Preset, Tour and Pattern.
Snapshot	Select the Snapshot check box, and then the system takes snapshot
	automatically when an alarm is triggered. You need to set the alarm snapshot
	period as described in "5.5.1.2 Snapshot."

Step 3 Click Save.

### 5.4.1.2 Video Tamper

Alarms will be triggered if there is video tampering.

<u>Step 1</u> Select Setting > Event > Video Detection > Video Tamper. The Video Tamper interface is displayed. See Figure 5-82.

	5	1 5	
Motion Detection	Video Tamper	Scene Changing

Record Delay	10	s (10~300)	
Relay-out	1 2		
Alarm Delay	10	s (10~300)	
Send Email			
PTZ			
Snapshot			
	Default	Refresh	Save
Step 2 Select the Enab	le check box, and the	n configure parameter	rs as needed.

For parameters configuration, see "5.4.1.1 Motion Detection."

Step 3 Click Save.

# 5.4.2 Smart Motion Detection

After you set smart motion detection, when the human, non-motor vehicles and motor vehicles appear and move fast enough to reach the preset sensitivity value, the alarm linkage actions will be performed. The function can help you to avoid the alarms triggered by natural environment change.

 $\square$ 

- The function depends on the result of motion detection, and all other parameters (except sensitivity) of motion detection function are used, including arming period, area settings, and linkage configurations. If no motion detection is triggered, smart motion detection will not be triggered.
- If motion detection is not enabled, when smart motion detection is enabled, motion detection will also be enabled. If both functions are enabled, when motion detection is disabled, smart motion detection will also be disabled.
- When smart motion detection is triggered and recording is linked, back-end devices can filter recording with human or vehicles through smart search function. For details, see the corresponding user's manual.

### Preparation

- Select **Setting > Event > Video Detection > Motion Detection**, and then enable the motion detection function.
- Set the arming period and detection area. The sensitivity of each region is larger than 0, and the threshold is not equal to 100.

### Procedure

#### <u>Step 4</u> Select Setting > Event > Smart Motion Detection.

The **Smart Motion Detection** interface is displayed. See Figure 5-84. Figure 5-84 Smart motion detection

Smart Motion Detection			
Enable			
Effective object	✓ Human	Motor Vehicle	
Sensitivity	Medium	~	
	Default	Refresh	Save

<u>Step 5</u> Select the **Enable** check box, and then the **Smart Motion Detection** is enabled.

<u>Step 6</u> Select the effective object and sensitivity.

- Effective object: Select Human or Motor Vehicle. When Human is selected, both people and non-motor vehicles will be detected.
- **Sensitivity**: Select **High**, **Medium**, or **Low**. The higher the sensitivity, the easier the alarm is triggered.
- Step 7 Click Save.

# **5.4.3 Audio Detection**

<u>Step 1</u> Select Setting > Event > Audio Detection > Audio Detection. The Audio Detection interface is displayed. See Figure 5-85.

Audio	Detection				
	Input Abnormal				
	Intensity Change				
	Sensitivity		-0		
	Threshold		0		
	Threshold		U		
	Period	Setting	]		
	Anti-Dither	5	s (0~'	100)	
$\checkmark$	Record				
	Record Delay	10	s (10-	~300)	
$\checkmark$	Relay-out	1 2			
	Alarm Delay	10	s (10-	~300)	
	Send Email				
	PTZ				
$\checkmark$	Snapshot				
	Default	Refresh		Save	

Figure 5-85 Audio detection settings

<u>Step 2</u> Configure parameters as needed. For the parameter description, see Table 5-26.

Table 5-26 Audio detection parameter	r descrip	otion
--------------------------------------	-----------	-------

Parameter	Description
Input	Select Input Abnormal, and then an alarm is triggered when there is
Abnormal	abnormal audio input.
Intensity	Select Intensity Change, and then an alarm is triggered when the change in
Change	sound intensity exceeds the defined threshold.
	The value ranges from 1 to 100. The smaller this value is, the larger the input
Sensitivity	sound volume changes are needed for it to be judged as an audio anomaly.
	You need to adjust it according to the actual condition.
	The value ranges from 1 to 100. Configure the ambient sound intensity you
Threshold	need to filter. The louder the ambient noise is, the larger this value shall be.
	You need to adjust it according to the actual condition.

For other parameters, see "5.4.1.1 Motion Detection."

Step 3 Click Save.

# 5.4.4 Smart Plan

Each preset can be configured with different smart functions. You need to select a certain function for it to come into effect.

 $\square$ 

Before configuring the smart plan, you need to set presets in advance. For setting methods, see "5.3.2.1 Preset."

<u>Step 1</u> Select Settings > Event> Smart Plan.

The Smart Plan interface is displayed, see Figure 5-86.

Step 4 Click Save.

# 5.4.5 IVS

### Basic Requirements for the Scene

- The target size shall not exceed 10% of the image.
- The pixel of the target shall be no less than 10×10; the pixel of abandoned object shall be no less than 15×15 (CIF image); the width and height of the target shall be no more than 1/3 of the image. It is recommended that the height of the target is 10% of the image.
- The brightness difference between the target and the background is no less than 10 gray values.
- The target shall be present in the image for no less than 2 consecutive seconds, and the moving distance shall be larger than its width and no less than 15 pixels (CIF image).
- Try to reduce the complexity of monitoring scenes. It is not recommended to enable IVS in scenes with dense targets and frequent light changes.
- Try to avoid the following scenes: scenes with reflective surfaces such as glass, bright ground or water; scenes that disturbed by tree branches, shadows or winged insects; scenes that against light or under direct light exposure.

Before using the function, you need to set presets in advance. For setting methods, see "5.3.2.1 Preset."

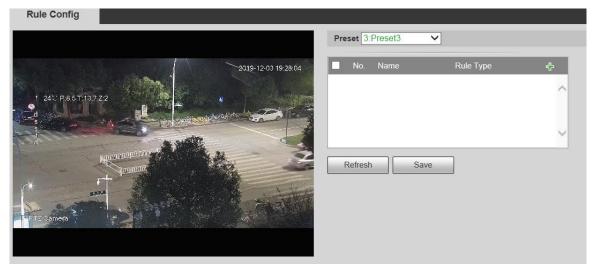

### 5.4.5.1 Rule Config

Set smart rules. Follow these steps to complete the configuration.

#### <u>Step 1</u> Select Setting > Event > IVS > Rule Config.

The **Rule Config** interface is displayed. See Figure 5-89.

#### Figure 5-89 Adding smart rules

Step 2 Select the presets to be configured with smart rules.

Step 3 Click 🔂 to add smart rules.

Double-click rule type to modify the type of rules.

Step 4 Click Save.

#### 5.4.5.1.1 Tripwire

Alarms are triggered when the target crosses the warning line in the defined direction.

It requires certain stay time and moving space for the target to be confirmed, so you need to leave some space at both sides of the warning line during configuration and do not draw it near obstacles.

Applicable scenes: Scenes with sparse targets and no occlusion between targets, such as perimeter protection of unattended areas.

<u>Step 1</u> Select **Tripwire** from the **Rule Type** list.

The configuration interface is displayed. See Figure 5-90.

#### Figure 5-90 Tripwire rule settings

- <u>Step 2</u> Click **Draw Rule**, and you can draw rules on the monitoring screen. For parameter description, see Table 5-27.

#### Click Clear to the right of Draw Rule, and you can clear all drawn rules.

Parameter	Description
Max Size	Set the size range of detection targets to be filtered, and select the maximum
Min Size	<ul> <li>or minimum size.</li> <li>Max Size: Set the maximum size of targets to be filtered. When the target is larger than this size, the system will ignore it. The unit is pixel.</li> <li>Min Size: Set the minimum size of targets to be filtered. When the target is smaller than this size, the system will ignore it. The unit is pixel.</li> </ul>
Pixel Counter	Help to accurately draw the target area. Enter the length and width of the target area in <b>Pixel Counter</b> , and click <b>Draw</b> <b>Target</b> to generate the target area in the monitoring screen. The unit is pixel.
Lock/Unlock	Enter the rule configuration interface, and the locking function will be automatically enabled, and the locking time is 180 s. During this period, the device cannot track the target. Click <b>Unlock</b> to release the control.
	The locking function only takes effect in the rule configuration interface. After switching to the <b>Live</b> interface, the Device can track the target normally.

Table 5-27 Rule drawing parameter description

<u>Step 3</u> Configure parameters as needed. For the parameter description, see Table 5-28.

Table 5-28 Tripwire parameter description

Parameter	Description
Period	<ul> <li>Set the alarming period to enable alarm events in the period you set.</li> <li>1. Click Setting, and then the Period interface is displayed.</li> <li>2. Enter the time value or press and hold the left mouse button, and drag directly on the setting interface. There are six periods for setting each day. Select the check box next to the period, and the set period will be effective.</li> <li>3. Select the day of week (Sunday is selected by default; If All is selected, the setting is applied to the whole week. You can also select the check box next to the day to set it separately).</li> <li>4. After completing the setting, click Save to return to the rule</li> </ul>
Direction	configuration interface.
Direction Alarm Track	Configure the tripwire direction. You can select <b>A-&gt;B</b> , <b>B-&gt;A</b> or <b>A&lt;-&gt;B</b> . Select the check box, and there will be alarm tracking when an smart rule is triggered.
Track Time	Set the alarm tracking time.
Record	Select the check box, and when an alarm is triggered, the system will start recording automatically. Before using the function, you need to set the recording period of the alarm in <b>Storage &gt; Schedule</b> , and select <b>Auto</b> for <b>Record Mode</b> in the <b>Record Control</b> interface.
Record	When the alarm is over, the recording will continue for an extended period of
Delay	time. The value range is 10–300 s.
Relay-out	Select the check box, and you can enable the alarm linkage output port, and link corresponding relay-out devices when an alarm is triggered.
Alarm Delay	When the alarm is over, the alarm will continue for an extended period of time. The value range is 10–300 s.
Send Email	Select the <b>Send Email</b> check box, and when an alarm is triggered, the system sends an email to the specified mailbox. You can configure the mailbox in <b>Setting &gt; Network &gt; SMTP (Email)</b> .
Snapshot Step 4 Click <b>S</b>	Select the check box, and the system will automatically take snapshots in case of alarms. You need to set snapshot period in <b>Storage &gt; Schedule</b> .

Step 4 Click Save.

#### 5.4.5.1.2 Intrusion

Intrusion includes crossing areas and in-area functions.

- Crossing area means an alarm will be triggered when a target enters or leaves the area.
- In-area function means an alarm will be triggered when a specified number of targets appear in a set alarming area at a given time. In-area function only counts the number of targets in the detection area, regardless of whether they are the same targets.
- For the reporting time interval of the in-area functions, the system will trigger the first alarm and then detect whether the same event occurs in the interval period. If no same event occurs in this period, the alarm counter will be cleared.

Similar to the warning line, to detect an entry/exit event, a certain movement space should be reserved at the periphery of the area line.

Applicable scenes: Scenes with sparse targets and no occlusion between targets, such as perimeter protection of unattended areas.

<u>Step 1</u> Select Intrusion from the Rule Type list.

The configuration interface is displayed. See Figure 5-91.

Figure 5-91 Intrusion settings

<u>Step 2</u> Click **Draw Rule**, and you can draw rules on the monitoring screen. For parameter description, see Table 5-27.

Click Clear to the right of Draw Rule, and you can clear all drawn rules.

<u>Step 3</u> Configure parameters as needed. For the parameter description, see Table 5-29.

Parameter	Description
Action	Configure intrusion action, and you can select Appear or Cross.
Direction	Select the crossing direction from Enters, Exits, and Enter & Exit.
=	

For other parameters, see "5.4.5.1.1 Tripwire."

Step 4 Click Save.

#### 5.4.5.1.3 Abandoned Object

An alarm will be triggered when the selected target in the monitoring scene stays in the screen for more than the set time.

Pedestrians or vehicles that stay for too long would be regarded as abandoned objects. To filter out such alarms, you can use **Target filter**. In addition, the duration can be properly extended to avoid false alarm due to a short stay of people.

Applicable scenes: Scenes with sparse targets, no obvious and frequent light changes. For scenes with intensive targets or too many obstacles, missed alarms would increase; for scenes in which too many people stay, false alarms would increase. Select detection areas with simple texture, because this function is not applicable to scenes with complex texture.

#### Step 1 Select Abandoned Object from the Rule Type list.

The configuration interface is displayed. See Figure 5-92. Figure 5-92 Abandoned object settings

Rule Config	
	Preset 3:Preset3

<u>Step 2</u> Click **Draw Rule**, and you can draw rules on the monitoring screen. For parameter description, see Table 5-27.

Click Clear to the right of Draw Rule, and you can clear all drawn rules.

<u>Step 3</u> Configure parameters as needed. For the parameter description, see Table 5-30.

Table 5-30 Abandoned object parameter description

Parameter	Description
Duration	For abandoned object, the duration is the shortest time to trigger an alarm
	after an object is abandoned.

For other parameters, see "5.4.5.1.1 Tripwire."

Step 4 Click Save.

#### 5.4.5.1.4 Missing Object

An alarm will be triggered when the selected target in the scene is taken away for the time longer than the set duration.

The system analyzes static areas from the foreground, and determines whether it is missing object or abandoned object from the similarity of its foreground and background. When the time exceeds the set period, an alarm is triggered.

Applicable scenes: Scenes with sparse targets, no obvious and frequent light changes. For scenes with intensive targets or too many obstacles, the missed alarm would increase; for scenes in which too many people stay, the false alarm would increase. Keep the detection area texture as possible simple as possible, because this function is not applicable to scenes with complex texture.

#### Step 1 Select Moving Object from the Rule Type list.

The configuration interface is displayed. See Figure 5-93. Figure 5-93 Missing object setting

<u>Step 2</u> Click **Draw Rule**, and you can draw rules on the monitoring screen. For parameter description, see Table 5-27.

Click Clear to the right of Draw Rule, and you can clear all drawn rules.

<u>Step 3</u> Configure parameters as needed. For the parameter description, see Table 5-31.

Table 5-31 Missing object parameter description

Parameter	Description
Duration	Configure the shortest time from the object disappearing to the alarm being
	triggered.

For other parameters, see "5.4.5.1.1 Tripwire."

Step 4 Click Save.

# 5.4.6 Face Recognition

Select Setting > Event > Smart Plan, and then enable face recognition.

• This function is available on select models.

The function can detect faces and compare them with those in the configured face database.

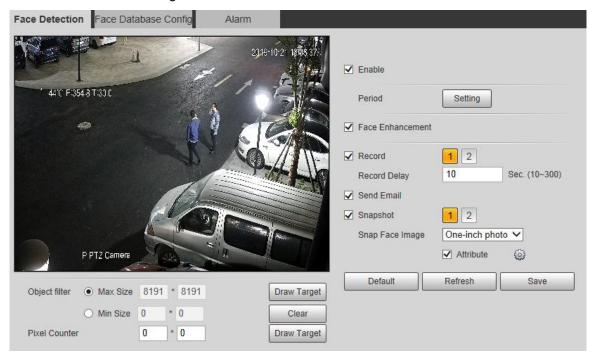

### 5.4.6.1 Face Detection

When human face is detected in the monitoring screen, an alarm is triggered and the linked activity is executed.

<u>Step 1</u> Select Setting > Event > Face Recognition > Face Detection.

The Face Detection interface is displayed. See Figure 5-94.

Figure 5-94 Face detection interface

<u>Step 2</u> Select **Enable**, and you can enable the face detection function.

<u>Step 3</u> Configure parameters as needed. For the parameter description, see Table 5-32.

Parameter	Description			
Period	Alarm event will be triggered only within the defined time period. See			
Fellou	"5.4.1.1 Motion Detection."			
Face	Select Face Enhancement to preferably guarantee clear faces with low			
Enhancement	stream.			
	Select <b>Record</b> , and the system records video when alarms are triggered.			
	To enable video recording, you need to make sure that:			
Record	• The motion detection recording is enabled. For details, see "5.5.1.1			
	Record."			
	• The auto recording is enabled. For details, see "5.5.4 Record			
	Control."			
Report Dolov	The video recording will not stop until the record delay time you set has			
Record Delay	passed.			

Table 5-32 Face detection parameter description

Parameter	Description
Send Email	Select <b>Send Email</b> , and when alarms are triggered, the system sends email to the specified mailbox. For the email settings, see "5.2.5 SMTP (Email)."
Snapshot	<ul> <li>Select Snapshot, and the system takes snapshot when alarms are triggered.</li> <li>Enable the motion detection snapshot first. For details, see "5.5.1.1 Record."</li> <li>For searching and setting snapshot storage path, see "5.1.2.5 Path."</li> </ul>
Snap Face Image	Set the snapshot scope, including <b>Face</b> and <b>One-inch photo</b> .
Attribute	Select the <b>Attribute</b> check box, click , and then you can set the human attributes during face detection.

Step 4 Click Save.

### 5.4.6.2 Face Database Config

After you successfully configure the face database, the detected faces can be compared with the information in the face database. Configuring a face database includes creating a face database, adding face pictures, and face modeling.

#### 5.4.6.2.1 Adding Face Database

Create a face database, and then register face images, that is to add face pictures to the newly created face database.

<u>Step 1</u> Select Setting > Event > Face Recognition > Face Database Config.

The Face Database Config interface is displayed. See Figure 5-95.

Figure 5-95 Face database config

Face Detection Face Database Config Alarm							
Add Face Datab. Capacity Limit — 75%							
No.			Deploy 🔤				
1	1	93		82		0	•
2	dh	4670	×	82		0	•
Refresh	Save						

#### Step 2 Click Add Face Database.

The **Add Face Database** interface is displayed. See Figure 5-96.

Add Face Database						
Name						
	ок	Cancel				

<u>Step 3</u> Set face database name.

<u>Step 4</u> Click **OK** to complete the addition.

The added face database is displayed. See Figure 5-97. Figure 5-97 Adding face database completed

1 93 0 82 0 2 dh 4670 2 82 0			Deploy				
et dh 4670 😥 62 🔄	1	93		82	.8	0	•
	dh	4670	¥	82	10	0	•

<u>Step 5</u> Configure parameters as needed. For the parameter description, see Table 5-33.

Parameter	Description
Deploy	Select <b>Deploy</b> and the face database takes effect.
	The comparison is successful only when the similarity between the
Similarity	detected face and the face feature in face database reaches the set
Threshold	similarity threshold. After this, the comparison result is displayed on the
	Live interface.
More Info	Click More Info to manage face database. You can set search conditions,
More mio	register people, and modify people information.
	Alarm event will be triggered only within the defined time period. See
Arm/Disarm	"5.4.1.1 Motion Detection."
Delete	Delete the selected face database.

Table 5-33 Face database config parameter description

#### 5.4.6.2.2 Adding Face Pictures

Add face pictures to the created face database. Manual addition and batch import are supported.

#### **Manual Addition**

Add a single face picture. Use this method when registering a small number of face pictures.

<u>Step 1</u> Select Setting > Event > Face Recognition > Face Database Config.

The Face Database Config interface is displayed.

<u>Step 2</u> Click III More Info for the face database to be configured.

The interface is displayed. See Figure 5-98.

Figure 5-98 More info

```

    Date of Beth
    Search
```

#### 

Set filtering conditions as needed, and then click **Search**. The search result is displayed.

#### Step 3 Click Registration.

The **Registration** interface is displayed. See Figure 5-99.

#### Figure 5-99 Registration interface

Registration	×
Upload Picture *	
Name*	Upload Picture
Gender Male 🗸	
Date of Birth yyyy-mm-dd	
Region Unlimited V	
City Customized V	
Credentials IC 🗸	
ID No.	
Address	
Memo	
	Add to task list Cancel

#### Step 4 Click Upload Picture.

Import the face pictures to be uploaded. The interface is displayed. See Figure 5-100.

You can manually select a face area. After uploading the picture, select a face area and click **OK**. If there are multiple faces in a picture, select the target face and click **OK** to save the face picture.

#### Figure 5-100 Addition completed

Delete	Status	
$\square$	OK Remove All	

Click Remove All, and you can remove all the tasks.

#### **Batch Registration**

Import multiple face pictures in batch. Use this method when registering a large number of face pictures.

Before importing pictures in batches, name the face pictures in the format of "Name#SGender#BDate of Birth#NRegion#TCredentials Type#MID No. jpg" (for example, "John#S1#B1990-01-01#NCN#T1#M330501199001016222"). For naming rules, see Table 5-34.

Name is required and the rest are optional.

Table 5-34 Naming rules for batch import

Naming Rules	Description	
Name	Enter the corresponding name.	
Gender	Enter a number. 1: Male; 2: Female.	
Date of Birth	Enter numbers in the format of yyyy-mm-dd. For example, 2017-11-23.	
Region	Enter the region name.	
Credentials		
Туре	Enter a number. 1: ID card; 2: passport.	
ID No.	Enter ID No.	

<u>Step 1</u> Select Setting > Event > Face Recognition > Face Database Config.

The Face Database Config interface is displayed.

Step 2 Click I More Info for the face database to be configured.

The Face Database interface is displayed.

Step 3 Click Batch Registration.

The Task List interface is displayed. See Figure 5-102.

Figure 5-102 Batch registration

	Check Details Cancel	

<u>Step 6</u> After the registration is completed, click **Next** to view the registration result.

#### 5.4.6.2.3 Managing Face Pictures

Add face pictures to face database; manage and maintain face pictures to ensure correct information.

#### **Modifying Face Information**

On the Face Database Config interface, move the mouse pointer to the face picture or person

information line. Click Z or Z, and the **Registration** interface is displayed. See Figure

5-105. After modifying the face picture information as needed, click **Add to task list**. Figure 5-105 Registration interface

	Add to task list Cancel

#### **Deleting Face Pictures**

Enter face database, and then delete the created face picture.

• Single deletion: Move the mouse pointer to the face picture or people information line, and

then click  $\square$  or  $\square$  to delete the face picture.

• Batch deletion: Move the mouse pointer to the face picture or people information line, and

then click at the upper right corner of the face pictures, or click on person information line. After selecting multiple items, click **Add to the delete list**, click **add to the delete list** 

• Delete all: When viewing face pictures in a list, click  $\Box$  on people information line (or select **All** when viewing face pictures in pictures), click **Add to the delete list**, click

Task List 1, and then click **OK** to delete all face pictures.

#### 5.4.6.2.4 Face Modeling

Extract and import the relevant information of face pictures into the database through face modeling, and create a face feature mode for smart detection such as face comparison.

- The more face pictures you choose, the longer the modeling time is. Wait patiently.
- During the modeling process, some smart detection functions (such as face comparison) are temporarily unavailable and can be resumed after the modeling is completed.
- <u>Step 1</u> Select Setting > Event > Face Recognition > Face Database Config. The Face Database Config interface is displayed.
- Step 2 Click III More Info for the face database to be configured.

The face database interface is displayed. See Figure 5-106. Figure 5-106 Face database interface

Face Detection Face Database Config Alarm	
Back   Face Database: dh	🔤 Task Lis
	Date of Birth Yyyyy mm d Til Yyyyy mm d Til Modeling Status Unlimited V Region Unlimited V Search
Registration Batch Registration Modeling All Modeling	Add to the deteile list 📒

<u>Step 3</u> Choose the face pictures for modeling as needed.

 $\square$ 

Click 🔳 to view the face picture in a list. Click 🚨 to view the face image as a thumbnail.

Modeling All

- Click **Modeling All**, and all face pictures in the face database will be modeled.
- Selective Modeling

If there are many face pictures in the face database, set filtering conditions and click **Search** to select face pictures for modeling.

Relay-out	interacts with the linked alarm devices.			
	The alarm will continue for an extended period of time. The value range is 1–			
Alarm Delay	300 s.			

Table 5-35 Alarm linkage parameter description

Step 3 Click Save.

# 5.4.7 People Counting

- Before using this function, you need to enable **People Counting** in **Smart Plan**.
- The people counting data will be overwritten if the disk is full. Back up the data in time as needed.
- This function is available on select models.

You can use this function to count the number of people in the area and generate reports.

## 5.4.7.1 People Counting

With the function, the system can count the number of people appearing in the monitoring screen within a certain period of time.

<u>Step 1</u> Select Setting > Event > People Counting > People Counting.

The **People Counting** interface is displayed. See Figure 5-109.

Figure 5-109 People counting settings

- <u>Step 2</u> Select the presets to be configured.
- <u>Step 3</u> Click **Draw Rule**, and you can draw rules on the monitoring screen. For parameter description, see Table 5-27.

Click Clear to the right of Draw Rule, and you can clear all drawn rules.

<u>Step 4</u> Configure parameters as needed. For the parameter description, see Table 5-36.

Table 5-36 People counting parameter description

Parameter	Description
OSD	Display the number of people displayed in the area in real time. Click <b>Clear</b> ,
030	and the current number will be zero.
Enter No.	Set the Enter No., and when the number of people entering reaches the set
Enter NO.	value, an alarm will be triggered.
Leave No.	Set the Leave No., and when the number of people leaving reaches the set
Leave No.	value, an alarm will be triggered.
Stranded	Set the <b>Stranded No.</b> , and when the number of people staying reaches the
No.	set value, an alarm will be triggered.

For other parameters, refer to "5.4.5.1.1 Tripwire."

Step 5 Click Save.

## 5.4.7.2 Report

You can view the statistics results of people in the scene during the selected period.

<u>Step 1</u> Select Setting > Event > People Counting > Report.

The **Report** interface is displayed. See Figure 5-110.

Figure 5-110 People counting-report

Page         Report           Preset         v           Inset         Found Counting           Stat Tree         2019-11-25           Inset         2019-11-25 <t< th=""><th></th></t<>

<u>Step 2</u> Select a preset.

<u>Step 3</u> Select the Rule, Statistics Type, and Time Range.

<u>Step 4</u> Select the start time and end time for searching reports.

<u>Step 5</u> Select Flow Direction and Chart Type.

<u>Step 6</u> Click **Search** to generate reports, and click **Export** to export the report to local storage.

# 5.4.8 Heat Map

- Before enabling **Heat Map**, you need to set presets in **PTZ** section, and select the function in the **Smart Plan**.
- The data will be overwritten if the disk is full. Back up the data in time as needed.

• This function is available on select models.

### 5.4.8.1 Heat Map

The function can be used to detect the activity level of moving objects in the scene during a certain period of time.

#### <u>Step 1</u> Select Setting > Event > Heat Map > Heat Map.

The Heat Map interface is displayed. See Figure 5-111.

Figure 5-111 Heat map interface

- <u>Step 2</u> Select the presets to be configured.
- <u>Step 3</u> Select the **Enable** check box, and then the heat map function is enabled.
- Step 4 Click Setting to set the arming period. For details, see "5.4.1.1 Motion Detection."
- Step 5 Click Save.

### 5.4.8.2 Report

You can view the heat map report for the scene in the selected time period.

<u>Step 1</u> Select Setting > Event > Heat Map > Report.

The **Report** interface is displayed.

- <u>Step 2</u> Set the start time and end time to search for the heat map report.
- Step 3 Select a preset.
- <u>Step 4</u> Click **Search**, and the search results will be displayed on the interface. See Figure 5-112.

Figure 5-112 Report

# 5.4.9 Video Metadata

With the function, the system can count the number of motor vehicles, non-motor vehicles and people in the monitoring screen, identify the features of the vehicles and people in the scene, and take snapshots.

- Before using video metadata, you need to enable the function in the **Smart Plan**.
- This function is available on select models.

### 5.4.9.1 Scene Setting

Set the parameters of snapshot, analysis and alarm in the scene.

<u>Step 1</u> Select Setting > Event > Video Metadata.

The Scene Set interface is displayed. See Figure 5-113.

#### Figure 5-113 Video metadata-scene set

Scene Set	Picture	Report

<u>Step 2</u> Click the **Preset** list to select the preset to configure video metadata.

<u>Step 3</u> Click 🔛 to add a rule type.

<u>Step 4</u> Modify the parameters as needed.

- Double-click the name to modify the rule name.
- Select the rule type from **People**, **Non-motor Vehicle** and **Motor Vehicle**.

Click the corresponding 😑 to delete detection items.

<u>Step 5</u> Configure parameters as needed. For parameter description, see Table 5-37.

Parameter	Description					
People Flow						
Statistics						
Non-motor						
Vehicle Flow	After selection, traffic flow statistics will be displayed on the screen.					
Statistics						
Traffic Flow

Clear	Click it to clear the statistics of motor vehicles, non-motor vehicles and					
Clear	people.					

For other parameters, see "5.4.5.1.1 Tripwire."

Step 6 Click Save.

### 5.4.9.2 Picture Overlay

Set the overlay information on the snapshot.

- <u>Step 1</u> Select Setting > Event > Video Metadata > Overlay. The Picture interface is displayed.
- <u>Step 2</u> Select **Picture Overlay Type** from **People**, **Non-motor Vehicle** and **Motor Vehicle**. See Figure 5-114, Figure 5-115 and Figure 5-116.

Figure 5-114 Picture overlay-motor vehicle

<u>Step 3</u> Select overlay information as needed.

If you select Location, you need to manually enter the location of the Device.

Step 4 Click Save.

### 5.4.9.3 Report

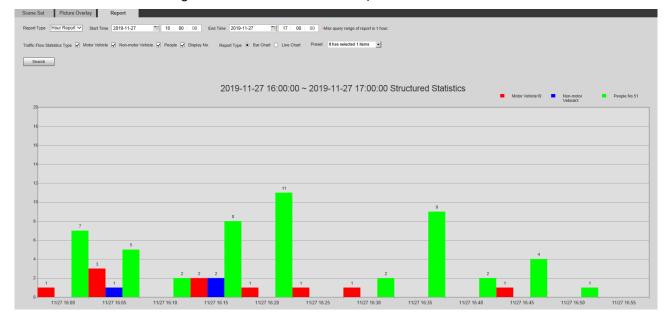

You can view the number of vehicles, non-vehicles and people in the scene during the selected period.

<u>Step 1</u> Select Setting > Event > Video Metadata > Report.

The **Report** interface is displayed.

- <u>Step 2</u> Select the **Report Type**.
- <u>Step 3</u> Select the start time and end time for searching reports.
- <u>Step 4</u> Select the Traffic Flow Statistics Type.
- Step 5 Click Search to generate reports. See Figure 5-117.

Figure 5-117 Video metadata report

# 5.4.10 Alarm

#### <u>Step 1</u> Select **Setting > Event > Alarm**.

```
The Alarm interface is displayed. See Figure 5-118.
```

Figure	5_1	18	Δlarm
Figure	0- I	10	Alaitti

Snapshot	
	Default Refresh Save

<u>Step 2</u> Configure parameters as needed. For parameter description, see Table 5-38.

Parameter	Description
Enable	Select the <b>Enable</b> check box, and then the alarm linkage is enabled.
Relay-in	Select alarm input, and 7 alarm inputs are available.
	There are two types: <b>NO</b> (normally open) and <b>NC</b> (normally closed). Switch
Sensor Type	from <b>NO</b> to <b>NC</b> , and alarm event will be enabled. Switch from <b>NC</b> to <b>NO</b> , and
	alarm event will be disabled.

Table 5-38 Alarm setting parameter description

For other parameters, see "5.4.1.1 Motion Detection."

Step 3 Click Save.

# 5.4.11 Abnormality

Abnormality includes 7 alarm events: No SD Card, Capacity Warning, SD Card Error, Disconnection, IP Conflict, Illegal Access, and Security Exception.

# 5.4.11.1 SD Card

In case of an SD card exception, an alarm will be triggered. Follow these steps to complete the configuration.

#### <u>Step 1</u> Select Setting > Event > Abnormality > SD Card.

The **SD Card** interface is displayed. See Figure 5-119, Figure 5-120, and Figure 5-121. Figure 5-119 No SD card

<u>Step 2</u> Configure parameters as needed. For parameter description, see Table 5-39.

Table 5-39 SD ca	ard exception p	parameter description

Parameter	Description
Enable	Select the check box to enable this function.
Capacity	Configure the free space percentage, and if the free space in the SD card is
Limit	less than the defined percentage, an alarm is triggered.

For other parameters, see "5.4.1.1 Motion Detection."

Step 3 Click Save.

### 5.4.11.2 Network Exception

In case of a network exception, an alarm will be triggered. Follow these steps to complete the configuration.

<u>Step 1</u> Select Setting > Event > Abnormality > Network.

The **Network** interface is displayed. See Figure 5-122 and Figure 5-123.

#### Figure 5-122 Disconnection

<u>Step 2</u> Configure parameters as needed. See Table 5-40.

Table 5-40 Network exception parameter description

Parameter	Description
Enable	Select the check box to enable this function.
Can atle	en persentere and "F 4.4.4 Matien Datasticn "

For other parameters, see "5.4.1.1 Motion Detection."

Step 3 Click Save.

### 5.4.11.3 Illegal Access

Illegal access alarm is triggered when the login password has been wrongly entered for more than the times you set.

#### <u>Step 1</u> Select Setting > Event > Abnormality > Illegal Access.

The **Illegal Access** interface is displayed. See Figure 5-124.

	Figure 5-124	Illegal access	
SD Card	Network	Illegal Access	Security Exception
Enable			
Login Error	5	time (3~10)	
Relay-out	1 2		
Alarm Delay	10	s (10~300)	
Send Email			
	Default	Refresh	Save

<u>Step 2</u> Configure parameters as needed. For parameter description, see Table 5-41.

Table 5-41 Illegal access parameter description

Parameter	Description
Enable	Select the check box to set the illegal access alarm.
Login Error	After entering a wrong password for the set times, the alarm for illegal access
	will be triggered, and the account will be locked.

For other parameters, see "5.4.1.1 Motion Detection."

Step 3 Click Save.

### 5.4.11.4 Security Exception

When an event affecting the Device safety occurs, an alarm for safety exception will be triggered.

```
<u>Step 1</u> Select Setting > Event > Abnormality > Security Exception.
```

The Security Exception interface is displayed. See Figure 5-125.

Figure 5-125 Security exception

SD Card	Network	Illegal Access	Security Exception
Enable			
✓ Relay-out	1 2		
Alarm Delay	10	s (10~300)	
Send Email			
	Default	Refresh	Save

<u>Step 2</u> Configure each parameter as needed. For details, refer to "5.4.1.1 Motion Detection." <u>Step 3</u> Click **Save**.

## 5.5 Storage

## 5.5.1 Schedule

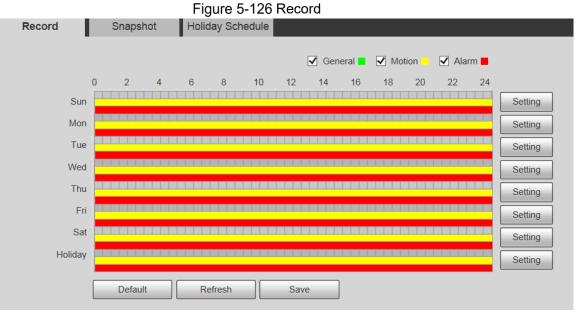

Before setting the schedule, make sure that the **Record Mode** is **Auto** in **Record Control**.

If the **Record Mode** is **Off**, the Device will not record or take snapshots according to the schedule.

## 5.5.1.1 Record

<u>Step 1</u> Select Setting > Storage > Schedule > Record.

The **Record** interface is displayed. See Figure 5-126.

- <u>Step 2</u> Select the day for recording from Monday to Sunday. Click **Setting** on the right, and the **Setting** interface is displayed. See Figure 5-127.
  - Set the recording period as needed. You can set up to six periods for one day.
  - You can select 3 types of recording: **General**, **Motion** and **Alarm**.

To set the time period, you can also press and hold the left mouse button and drag directly on the **Record** interface.

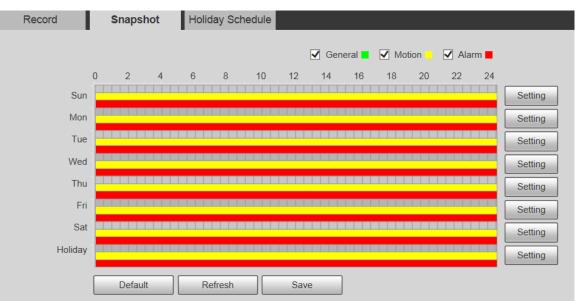

Figure 5-127 Record schedule setting

<u>Step 4</u> On the **Record** interface, click **Save**, and the **Save Succeeded!** prompt will be displayed, which means the recording schedule has been set.

### 5.5.1.2 Snapshot

```
<u>Step 1</u> Select Setting > Storage > Schedule > Snapshot.
The Snapshot interface is displayed. See Figure 5-129.
```

Figure 5-129 Snapshot

Step 2 For the snapshot schedule settings, refer to Step 2 and Step 3 in "5.5.1.1 Record."

<u>Step 3</u> Click **Save**, and the **Save Succeeded!** prompt will be displayed, which means the snapshot schedule has been set.

## 5.5.1.3 Holiday Schedule

You can set specific dates as holidays.

<u>Step 1</u> Select Setting > Storage > Schedule > Holiday Schedule. The Holiday Schedule interface is displayed. See Figure 5-130.

	Figure 5-130 Holiday schedule							
Record	Snapshot				Holida	ay Sched	ule	
Record	Record Snapshot							
Calenda	r				Dec	~		
Sun	Mon	Tue	Wen	Thu	Fri	Sat		
	2	3	4	5	6	7		
8	9	10	11	12	13	14		
15	16	17	18	19	20	21		
22	23	24	25	26	27	28		
29	30	31						
							]	
Refre	sh		Save					

Step 2 Select a date.

The selected date will be a holiday and displayed in yellow.

- <u>Step 3</u> Select **Record** or **Snapshot**, and then click **Save**. The **Save Succeeded!** prompt will be displayed.
- <u>Step 4</u> On the **Record** or **Snapshot** interface, click **Setting** to the right of **Holiday**. The setting method is the same as that of Monday to Sunday.
- <u>Step 5</u> Set the time period of one day for the **Holiday**, and the recording or snapshot will be taken according to the holiday time period.

## 5.5.2 Snapshot by Location

The system can take snapshots when the Device rotates to certain presets.

You need to set presets in advance.

<u>Step 1</u> Select Setting > Storage > Snapshot by Location.

The **Snapshot by Location** interface is displayed. See Figure 5-131.

#### Figure 5-131 Snapshot by location

apshot by Location		
Preset	Preset Title	Snapshot 🗸
1	Preset1	
2	Preset2	
Refresh	Save	
<u>2</u> Select presets.		
<ul> <li>Enable snapshot</li> </ul>	by location.	
♦ Click 💴 t	enable the function for the corr	esponding preset.

- ♦ Click Snapshot , and then select All Enabled to enable the function for all presets.
- Disable snapshot by location.
  - ♦ Click **C** to disable the function for the corresponding preset.
  - Click Snapshot, and then select All Disabled to disable the function for all presets.

Step 3 Click Save.

## 5.5.3 Destination

### 5.5.3.1 Path

Configure the storage path of recordings and snapshots of the Device, and select local SD card, FTP and NAS for storage. Store recordings and snapshots according to the event type, respectively corresponding to **General**, **Motion** and **Alarm** in the schedule, and then select the corresponding type of recordings or snapshots for storage.

<u>Step 1</u> Select Setting > Storage > Destination > Path.

The **Path** interface is displayed, see Figure 5-132. Figure 5-132 Path settings

Path	Local	FTP	NAS				
cord				Snapshot			
Event Type	Scheduled	Motion Detection	Alarm	Event Type	Scheduled	Motion Detection	Alarm
Local		$\checkmark$	$\checkmark$	Local	$\checkmark$	$\checkmark$	$\checkmark$
FTP				FTP			
NAS				NAS			

<u>Step 2</u> Select the corresponding event type and storage method as needed. For details, refer to Table 5-42.

Parameter	Description
Event Type	Select Scheduled, Motion Detection or Alarm.
Local	Save recordings or snapshots to the SD card.
FTP	Save recordings or snapshots to the FTP server.
NAS	Save recordings or snapshots to the NAS server.

Table 5-42 Path parameter description

Step 3 Click Save.

### 5.5.3.2 Local

Display the SD card information. You can set it as read only or read & write; you can also hot swap or refresh it.

Select **Setting > Storage > Destination > Local**, and the **Local** interface is displayed. See Figure 5-133.

Figure 5-133 Local storage

Path	Local	FTP	NAS		
Name	Status	Attribute		Used Capacity/Total Capacity	
					~
					~
Read Only F	Read & Write	Hot Swap Refresh			Format

- Click **Read Only**, and the SD card is set to read only.
- Click **Read & Write**, and the SD card is set to read & write.
- Click Hot Swap to remove the SD card.
- Click **Refresh** to start formatting the SD card.

After the SD card is formatted, the data will be cleared. Think twice before performing the operation.

### 5.5.3.3 FTP

FTP function can be enabled only when it is selected as a destination path. When the network is disconnected or does not work, you can save recordings and snapshots to the SD card by using **Emergency (Local)** function.

<u>Step 1</u> Select Setting > Storage > Destination > FTP.

The **FTP** interface is displayed. See Figure 5-134.

Figure 5-134 FTP settings

Path	Local	FTP	NAS	
Enable	SFTP(Recommended)	~		
Server Address	0.0.0.0			
Port	22	(0~65535)		
Username	anonymity			
Password	•••••	•••		
Remote Directory	share			
Emergency (Local)				
	test			
	Default	Refresh	Save	

 $\underline{Step 2} \quad Select the \ \textbf{Enable} check box, and the FTP function is enabled.$ 

- There might be risks if the FTP function is enabled. Think twice before enabling the function.
  - SFTP is recommended to ensure network security.

<u>Step 3</u> Configure parameters as needed. For parameter description, see Table 5-43.

Parameter	Description
Server Address	The IP address of the FTP server.
Port	The port number of the FTP server.
Username	The username to log in to the FTP server.
Password	The password to log in to the FTP server.
Remote	The destinction with an the FTD server
Directory	The destination path on the FTP server.
Emergency	If you enable the function, in case of FTP storage exception, the
(Local)	recordings and snapshots will be stored on the local SD card.

Table 5-43 FTP parameter description

<u>Step 4</u> Click **test** to verify the username and password, and test whether FTP is connected to the Device.

Step 5 Click Save.

## 5.5.3.4 NAS

This function can be enabled only when NAS is selected as a destination path. Select NAS to store files on the NAS server.

<u>Step 1</u> Select Setting > Storage > Destination > NAS.

The **NAS** interface is displayed. See Figure 5-135.

#### Figure 5-135 NAS settings

Path	Local	FTP	NAS
Enable	NFS	~	
Server Address	0.0.0.0		
Remote Directory			
	Default	Refresh	ave

<u>Step 2</u> Configure parameters as needed. For parameter description, see Table 5-44.

Table 5-44 NAS parameter description

Parameter	Description				
Enable	Select the check box to enable NAS function. Select NFS or SMB				
	function.				
	There might be risks if NFS or SMB is enabled. Think twice before				
	enabling the function.				
Server Address	The IP address of the NAS server.				
Remote	The destination both on the NAS conver				
Directory	The destination path on the NAS server.				

Step 3 Click Save.

## 5.5.4 Record Control

#### <u>Step 1</u> Select Setting > Storage > Record Control.

The Record Control interface is displayed. See Figure 5-136.

Figure 5-136 Record control

Record Control	5	
Pack Duration	30	Min. (1~120)
Pre-event Record	5	s (0~5)
Disk Full	Overwrite 🗸	]
Record Mode	Auto      Manual      O	ff
Record Stream	Main Stream V	]
	Default Re	fresh Save

Step 2 Configure parameters as needed. For parameter description, see Table 5-45.

Description
Description
Set the pack duration of each recording file. It is 30 minutes by default.
Set the pre-recording time. For example, if you enter 5, when an alarm is
triggered, the system reads the recording of the first 5 seconds in memory,
and then records it into a file.
If alarm recording or motion detection recording occurs, if there is no
recording before, the video data within N seconds before the recording is
started will also be recorded into the video file.
You can select <b>Stop</b> or <b>Overwrite</b> .
• <b>Stop</b> : The system stops recording when the disk is full.
• Overwrite: The system overwrites the oldest files and keeps
recording when the disk is full.
The data will be overwritten if the disk is full. Back up the file in time as
needed.
You can select Auto, Manual or Off. Select Manual mode to start
recording immediately, and select Auto mode to record within the
schedule.
Select Main Stream or Sub Stream.

Table 5-45 Record control parameter description

Step 3 Click Save.

## 5.6 System Management

## 5.6.1 Device Settings

## 5.6.1.1 General

#### <u>Step 1</u> Select Setting > System > General > General.

The General interface is displayed. See Figure 5-137.

### Figure 5-137 General settings

Port	123
Interval	10 Min. (0~30)
	Default Refresh Save

<u>Step 2</u> Configure parameters as needed. See Table 5-47.

Table 5-47 Date & time parameter description

Parameter	Description
Date Format	Select the date format. Three formats are available: YYYY-MM-DD,
Date Format	MM-DD-YYYY and DD-MM-YYYY.
Time Format	Select the time format. Two formats are available: <b>24-Hour</b> and <b>12-Hour</b> .
Time Zone	Set the local time zone.
Current Time	The current time of the Device.
DST	Set the Start Time and End Time of DST in the Date format or Week

Parameter	Description
	format.
NTP	Select the <b>NTP</b> check box to enable the network time sync function.
Server	Set the address of the time server.
	Set the network timing function of NTP server, and the Device time will be
	synchronized with the server time.
Port	Set the port number of the time server.
Interval	Set the synchronization interval of the Device and the time server.

Step 3 Click Save.

## **5.6.2 Account Settings**

### 5.6.2.1 Account

User management is only available for admin users.

- For **Username** and **Group Name**, the maximum length is 15 characters. Username can only consist of numbers, letters, underlines, dots and @; group name can only consist of numbers, letters and underlines.
- The password should consist of 8 to 32 non-blank characters and contain at least two types of characters among upper case, lower case, number, and special characters (excluding ' "; : &). The confirming password shall be the same as the new password. Set a high security password according to the prompt of password strength.
- The number of users and groups is 19 and 8 respectively by default.
- User management adopts a two-level method of group and user. Neither group names nor user names can be duplicated, and a user can only belong to one group.
- Users currently logged in cannot modify their own permissions.
- The user is admin by default. The **admin** account is defined as high privileged user.

#### 5.6.2.1.1 Username

Select **Setting > System > Account > Account > Username**, and you can enable anonymous login, add users, delete users, modify user passwords, and perform other operations. For the configuration interface, see Figure 5-139.

Username No.	Group Name Username	Group N	Name	Memo		Restricted Login	Modify	Delete
1	admin	admi		admin 's account		/	2	<b>•</b>
thority								
rthority	live	Plavback	System	System Info	Manual Control	File Backup	Storage	
i <b>thority</b> er ent	Live Network	Playback Peripheral	System AV Parameter	System Info PTZ	Manual Control Security	File Backup Maintenance	Storage	

#### Figure 5-139 Account interface

No permission is available for version information and other buttons except **Relay-out**, **Mark**, and **Wiper Control** in **Live** interface for the time being.

### Anonymous Login

Select the **Anonymous Login** check box, and you can log in to the Device anonymously without username and password after entering IP. Anonymous users only have preview permission in the permission list. In the anonymous login, click **Logout** to log in to the Device by using other usernames.

After **Anonymous Login** is enabled, the user can view audio and video data without authentication. Think twice before enabling the function.

### Adding Users

Add users in the group and set permissions.

As the default user with the highest authority, admin cannot be deleted.

Step 1 Click Add User.

The Add User interface is displayed. See Figure 5-140.

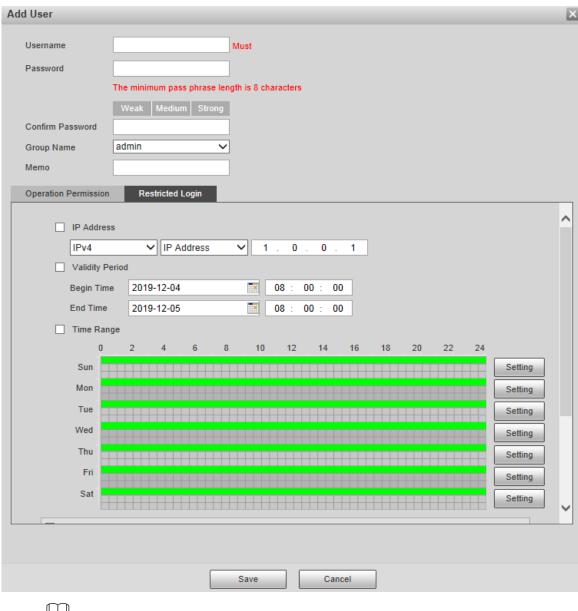

Figure	5-140	Adding	users
--------	-------	--------	-------

Add User	5		5	×
Username		Must		
Password	The minimum error above			
	The minimum pass phrase		frs	
	Weak Medium Stror	Ig

		Save	Cancel	
		Save	Cancer	

<u>Step 2</u> Enter **Username** and **Password**, confirm password, select **Group Name**, and then add **Memo**.

<u>Step 3</u> Set Operation Permission and Restricted Login.

- Operation Permission: Click **Operation Permission**, and then select the operation permission of the user as needed.
- Restricted Login: **Click Restricted Login**, and the interface shown in Figure 5-141 is displayed. You can control login to the Device by setting the **IP Address**, **Validity Period** and **Time Range**.

 $\square$ 

- Once the group is selected as needed, the user permission can only be a subset of • the group, and cannot exceed its permission attributes.
- It is recommended to give less permissions to general users than advanced users. Step 4 Click Save.

### **Modifying Users**

Step 1 Click corresponding to the user you want to modify.

The Modify User interface is displayed. See Figure 5-142.

Figure	5-142	Modifying	users
--------	-------	-----------	-------

Modify User			×
Username	admin	~	
Modify Password			
Group Name	admin	$\checkmark$	
Memo	admin 's account		
Authority	II All		
	✓ User		~
	🖌 Live		
	Playback		
	✓ System		·
	Save	Cancel	

<u>Step 2</u> Modify user information as needed.

Step 3 Click Save.

### **Modifying Password**

- <u>Step 1</u> Select the **Modify Password** check box.
- <u>Step 2</u> Enter old password and new password, and confirm password.
- Step 3 Click Save.

### **Deleting Users**

Click  $\bigcirc$  corresponding to the user to be deleted, and the user can be deleted.

Users/user groups cannot be recovered after deletion. Think twice before performing the operation.

#### 5.6.2.1.2 Group Name

Select **Setting > System > Account > Account > Group Name**, and you can add groups, delete groups, modify group passwords, and perform other operations. For the interface, see Figure 5-143.

Account On	vif User										
Anonymous Login											
Username	Group Name										
No.		Group Name				Мето				Modify	Delete

AV Parameter	PTZ	Security	Maintenance								

Figure 5-143 User group settings

### Adding Groups

For specific operations, refer to "5.6.2.1.1 Username."

### **Modifying Groups**

For specific operations, refer to "5.6.2.1.1 Username."

### **Deleting Groups**

For specific operations, refer to "5.6.2.1.1 Username."

### 5.6.2.2 Onvif User

On the web interface, you can add ONVIF users, or modify existing users.

#### Step 1 Select Setting > System > Account > Onvif User.

The **Onvif User** interface is displayed. See Figure 5-144.

Figure 5-144 Onvif user

#### Step 2 Click Add User.

The Add User interface is displayed. See Figure 5-145.

Figure 5-145 Adding users

Add User		X
Username	Must	
Password		
	The minimum pass phrase length is 8 characters	
	Weak Medium Strong	
Confirm Password		
Group Name	admin 🗸	
	Save Cancel	

<u>Step 3</u> Set the username and password, confirm password, and then select the group name. <u>Step 4</u> Click **Save**.

- Click 🗾 to modify user information.

## 5.6.3 Safety

## 5.6.3.1 RTSP Authentication

Set the authentication method for media stream.

#### <u>Step 1</u> Select Setting > System > Safety > RTSP Authentication.

The **RSTP Authentication** interface is displayed. See Figure 5-146.

Figure 5-146 RTSP authentication

RTSP Authentication	System Service	HTTPS	Firewall
Authorize Mode	Digest	~	
Default	Refresh	Save	

<u>Step 2</u> Select the **Authorize Mode**. You can select from **Digest**, **Basic** and **None**. It is **Digest** by default.

- Click **Default**, and **Digest** is selected automatically.
- Select **None**, and "Non-authentication mode may have risk. Are you sure to enable it" prompt will be displayed. Think twice before selecting the mode.
- Select **Basic** mode, and "Basic authentication mode may have risk. Are you sure to enable it?" prompt will be displayed. Think twice before selecting the mode.

### 5.6.3.2 System Service

You can configure system service to ensure system security.

<u>Step 1</u> Select Setting > System > Safety > System Service.

The **System Service** interface is displayed. See Figure 5-147.

	rigui	C 0-1+7 Oy3			
RTSP Authentication	System Service	HTTPS	Firewall

Default	Refresh	Save			

### Figure 5-147 System service

<u>Step 2</u> Configure system service parameters. For the detailed description, see Table 5-48.

Function	Description
	You can enable SSH authentication to perform safety management. The
	function is disabled by default.
SSH	
	It is recommended to disable SSH. If this function is enabled, there might
	be security risks.
	Enable this function, and when multiple users are viewing the monitoring
	screen simultaneously through network, they can find the Device through
Multicast/Broadcast	multicast/broadcast protocol.
Search	
	It is recommended to disable the multicast/broadcast search function. If
	this function is enabled, there might be security risks.
	You can enable <b>Password Reset</b> to perform security management. The
	function is enabled by default.
Password Reset	
r assword Neset	If the function is disabled, you can only reset the password after restoring
	the Device to factory defaults through pressing the Reset button on the
	device.
	You can access the Device through this protocol. The function is enabled
	by default.
CGI Service	
	It is recommended to disable the function. If this function is enabled, there
	might be security risks.
	You can access the Device through this protocol. The function is enabled
Onvif Service	by default.

Table 5-48 System service parameter description

Function	Description
	It is recommended to disable the function. If this function is enabled, there
	might be security risks.
	Enable this function to encrypt the stream transmitted through the private
	protocol.
Audio and Video	
Transmission	• Make sure that the matched devices or software support video
Encryption	decryption function.
	• It is recommended to enable the function. If the function is disabled,
	there might be risk of data leakage.
	Push the alarm snapshot triggered by the Device to the mobile phone. The
	function is enabled by default.
Mobile Push	
	It is recommended to disable the function. If this function is enabled, there
	might be security risks.
Private Protocol	You can select <b>Security Mode</b> and <b>Compatible Mode</b> . Security mode is
Authentication	recommended. If you select compatibility mode, there might be security
Mode	risks.

Step 3 Click Save.

## 5.6.3.3 HTTPS

### 

It is recommended to enable HTTPS service. If the service is disabled, there might be risk of data leakage.

Create certificate or upload signed certificate, and then you can log in through HTTPS with your PC. HTTPS can ensure data security, and protect user information and device security with reliable and stable technology.

<u>Step 1</u> Create certificate or upload the signed certificate.

- If you select **Create Certificate**, refer to the following steps.
  - 1) Select Setting > System > Safety > HTTPS.

The HTTPS interface is displayed. See Figure 5-148.

	I	Figure 5-148	3 HTTPS (1)

Figure 5-158 Install signed certificate

- 2) Click **Browse** to upload the signed certificate and certificate key, and then click **Upload**.
- 3) To install the root certificate, refer to Step 5) to 12) in **Create Certificate**.

#### <u>Step 2</u> Select Enable HTTPS and click Save.

The **Reboot** interface is displayed, and the configuration takes effect after reboot. See Figure 5-159.

#### Figure 5-159 Reboot

Rebo	pot
	The configuration takes effect, the device is restarting now, please don't leave this page or close the browser
	Enter https://xx.xx.xx.xx in the browser to open the login interface. If no certificate

Enter <u>https://xx.xx.xx</u> in the browser to open the login interface. If no certificate is installed, a certificate error prompt will be displayed.

- If HTTPS is enabled, you cannot access the Device through HTTP. The system will switch to HTTPS if you access the Device through HTTP.
- The deletion of created and installed certificates cannot be restored. Think twice before deleting them.

### 5.6.3.4 Firewall

Set a firewall for the Device to prevent network attacks after the Device is connected to the network.

<u>Step 1</u> Select Setting > System > Safety > Firewall.

The Firewall interface is displayed. See Figure 5-160.

	Figure 5-160 F	Firewall		
RTSP Authentication	System Service	HTTPS	Firewall	
Rule Type	Network Acces	is 🗸	-	
Enable				
Default	Refresh	Save		

<u>Step 2</u> Select the type of network attack that the firewall resists as needed. You can select **Network Access**, **PING Prohibited**, or **Prevent Semijoin**.

Step 3 Select Enable, and then the Firewall is enabled.

Step 4 Click Save.

## 5.6.4 Peripheral

The peripheral functions might vary with different models, and the actual interface shall prevail.

### 5.6.4.1 Wiper

#### <u>Step 1</u> Select Setting > System > Peripheral > Wiper.

The **Wiper** interface is displayed. See Figure 5-161.

#### Figure 5-161 Wiper settings

Wiper	
Mode	Manual
Interval Time	10 s (0~255)
Working Duration	10 Min. (10~1440)
	Default Refresh Save

<u>Step 2</u> Configure parameters as needed. For parameter description, see Table 5-49.

Parameter	Description
Mode	Set the wiper mode. It is <b>Manual</b> by default.
Mode	In <b>Manual</b> mode, you need to manually start the wiper.
Interval Time	The time between wiper starting to wiper ending.
Working	Set the maximum duration of the wiper operating once in <b>Manual</b> mode.
Duration	The value ranges from 10 minutes to 1440 minutes.

Table 5-49 Wiper setting parameter description

Step 3 Click Save.

## 5.6.5 Default

All information except IP address and user management will be restored to defaults. Think twice before performing the operation.

Select **Setting > System > Default**, and click **Default** to restore the Device. The configuration interface is displayed. See Figure 5-162.

Figure 5-162 Default interface

Default	
Default	Other configurations will be recovered to default except network IP address, user management and so on.
Factory Default	Completely recover device parameters to factory default.

Select the recovery mode as needed.

- Default: All information except IP address and user management will be restored to defaults.
- Factory Default: The function is equivalent to the Reset button of the Device. All configuration information of the Device can be restored to the factory defaults, and the IP address can also be restored to the original IP address. After clicking **Factory Default**, you need to enter the password of admin user on the interface displayed. The Device can be restored to factory defaults only after the system confirms that the password is correct.

- Only admin user can use this function.
- When the Device is restored to factory defaults, all information except the data in the external storage media will be erased. Delete data in external storage media by formatting and other methods.

## 5.6.6 Import/Export

When multiple devices share the same configuration methods, they can be quickly configured by importing and exporting configuration files.

<u>Step 1</u> On the web interface of one device, select **Setting > System > Import/Export**. The **Import/Export** interface is displayed. See Figure 5-163.

### Figure 5-163 Import/Export

Import/Export		
Backup Path		
Import	Export	

- <u>Step 2</u> Click **Export** to export the configuration file (.backup file) to the local storage path.
- <u>Step 3</u> Click **Import** on the **Import/Export** interface of the Device to be configured to import the configuration file, and the Device will complete the configurations.

## 5.6.7 Auto Maintain

You can select Auto Reboot or Auto Delete Old Files.

- If you select Auto Reboot, the frequency and time need to be set.
- If you select **Auto Delete Old Files**, you need to set the time period for the files to be deleted.

#### <u>Step 1</u> Select Setting > System > Auto Maintain.

The Auto Maintain interface is displayed. See Figure 5-164.

Figure 5-164 Auto maintain

Auto Maintain	
Auto Reboot	
Auto Delete Old Files	
Manual Reboot	
Refresh Save	

<u>Step 2</u> Configure parameters as needed. For parameter description, see Table 5-50.

Parameter	Description
Auto Reboot	Select the check box to set the Device reboot time.
	Select the check box to customize the time period for the files to be deleted.
	The value ranges from 1 day to 31 days.
Auto Delete Old Files	$\triangle$
1 1100	When you enable the function, The deleted files cannot be recovered.
Are you sure to enable this function now? prompt will be a	
	Think twice before enabling the function.

Table 5-50 Auto maintain parameter description

<u>Step 3</u> Click **Save** and the configuration will take effect.

## 5.6.8 Upgrade

Upgrade the system to improve device function and stability.

If wrong upgrade file has been used, restart the Device; otherwise some functions might not work properly.

Select **Setting > System > Upgrade**. The configuration interface is displayed. See Figure 5-165.

Figure 5-165 System upgrade

Select Firmware File		Browse	Upgrade
line Upgrade			
Auto-check for updates	Save		
	1 SON SODERIDE & DEPENDENT OF BERLEY, SPACE 18 -BD		Manual Check
System Version			
System Version	2102-000030-0-0001_00007_0000		

- File Upgrade: Click **Browse**, select the upgrade file, and then click **Upgrade** to upgrade the firmware. The upgrade file is in the format of \*.bin.
- Online Upgrade
  - 1) Select the **Auto-check for updates** check box.

This will enable the system to check for upgrade once a day automatically, and there will be system notice if any upgrade is available.

We need to collect the data such as IP address, device name, firmware version, and device serial number to perform auto-check. The collected information is only used to verify the legitimacy of the Device, and push the upgrade notification.

- 2) Click Save.

Click Manual Check, and you can check for upgrade manually.

## 5.7 Information

You can view information such as version, online users, log, and life statistics.

## 5.7.1 Version

You can view information such as system hardware features, software version and release date.

Select **Setting > Information > Version > Version**, and then you can see the version information of current web interface. See Figure 5-166.

Figure 5-166 Version

Version			
Device Type	EVEL NAME OF COLUMN A POINT		
System Version	VERSION AND A REPORT OF A MILLION AND AND A MILLION AND AND AND AND AND AND AND AND AND AN

Table 5-51 Log parameter description

Parameter	Description	
Start Time	The start time of the log to be searched (January 1, 2000 is the earliest	
	time).	
End Time	The end time of the log to be searched (December 31, 2037 is the latest	
	time).	
Tupo	The log type includes All, System, Setting, Data, Event, Record, Account,	
Туре	Clear Log, and Safety.	
	Set the start time and end time of the log to be searched, select the log	
Search	type, and then click <b>Search</b> . The searched log number and time period will	
	be displayed.	
Detailed	Click a log to display the datails	
Information	Click a log to display the details.	
Clear	Clear all logs of the Device, and classified clearing is not supported.	
	Back up the searched system logs to the PC currently used by the user.	
Backup		
	The data will be overwritten if the disk is full. Back up the data in time as	
	needed.	

Here are the meanings of different log types:

- **System**: Includes program launch, force exit, exit, program reboot, device shutdown/restart, system reboot, and system upgrade.
- Setting: Includes saving configurations, and deleting configuration files.
- **Data**: Includes disk type configurations, data erasing, hot swap, FTP state, and recording mode.
- **Event** (records events such as video detection, smart plan, alarm, and abnormality): Includes starting events, and ending events.
- **Record**: Includes file access, file access error, and file search.
- **Account** (records modification of user management, login, and logout): Includes login, logout, adding user, deleting user, modifying user, adding group, deleting group, and modifying group.
- **Safety**: Includes security-related information.
- **Clear Log**: Clearing logs.

## 5.7.2.2 Remote Log

Upload the Device operations to the log server.

<u>Step 1</u> Select Setting > Information > Log > Remote Log.

The **Remote Log** interface is displayed. See Figure 5-168.

#### Figure 5-168 Remote log

Log Re	mote Log
Enable	
IP Address	192. 168. 0. 108

# **Appendix 1 Cybersecurity Recommendations**

Cybersecurity is more than just a buzzword: it's something that pertains to every device that is connected to the internet. IP video surveillance is not immune to cyber risks, but taking basic steps toward protecting and strengthening networks and networked appliances will make them less susceptible to attacks. Below are some tips and recommendations on how to create a more secured security system.

#### Mandatory actions to be taken for basic equipment network security:

#### 1. Use Strong Passwords

Please refer to the following suggestions to set passwords:

- The length should not be less than 8 characters;
- Include at least two types of characters; character types include upper and lower case letters, numbers and symbols;
- Do not contain the account name or the account name in reverse order;
- Do not use continuous characters, such as 123, abc, etc.;
- Do not use overlapped characters, such as 111, aaa, etc.;

### 2. Update Firmware and Client Software in Time

- According to the standard procedure in Tech-industry, we recommend to keep your equipment (such as NVR, DVR, IP camera, etc.) firmware up-to-date to ensure the system is equipped with the latest security patches and fixes. When the equipment is connected to the public network, it is recommended to enable the "auto-check for updates" function to obtain timely information of firmware updates released by the manufacturer.
- We suggest that you download and use the latest version of client software.

### "Nice to have" recommendations to improve your equipment network security:

### 1. Physical Protection

We suggest that you perform physical protection to equipment, especially storage devices. For example, place the equipment in a special computer room and cabinet, and implement well-done access control permission and key management to prevent unauthorized personnel from carrying out physical contacts such as damaging hardware, unauthorized connection of removable equipment (such as USB flash disk, serial port), etc.

### 2. Change Passwords Regularly

We suggest that you change passwords regularly to reduce the risk of being guessed or cracked.

#### 3. Set and Update Passwords Reset Information Timely

The equipment supports password reset function. Please set up related information for password reset in time, including the end user's mailbox and password protection questions. If the information changes, please modify it in time. When setting password protection questions, it is suggested not to use those that can be easily guessed.

#### 4. Enable Account Lock

The account lock feature is enabled by default, and we recommend you to keep it on to guarantee the account security. If an attacker attempts to log in with the wrong password several times, the corresponding account and the source IP address will be locked.

#### 5. Change Default HTTP and Other Service Ports

We suggest you to change default HTTP and other service ports into any set of numbers between 1024~65535, reducing the risk of outsiders being able to guess which ports you are using.

### 6. Enable HTTPS

We suggest you to enable HTTPS, so that you visit Web service through a secure communication channel.

### 7. Enable Whitelist

We suggest you to enable whitelist function to prevent everyone, except those with specified IP addresses, from accessing the system. Therefore, please be sure to add your computer's IP address and the accompanying equipment's IP address to the whitelist.

### 8. MAC Address Binding

We recommend you to bind the IP and MAC address of the gateway to the equipment, thus reducing the risk of ARP spoofing.

### 9. Assign Accounts and Privileges Reasonably

According to business and management requirements, reasonably add users and assign a minimum set of permissions to them.

### 10. Disable Unnecessary Services and Choose Secure Modes

If not needed, it is recommended to turn off some services such as SNMP, SMTP, UPnP, etc., to reduce risks.

If necessary, it is highly recommended that you use safe modes, including but not limited to the following services:

- SNMP: Choose SNMP v3, and set up strong encryption passwords and authentication passwords.
- SMTP: Choose TLS to access mailbox server.
- FTP: Choose SFTP, and set up strong passwords.
- AP hotspot: Choose WPA2-PSK encryption mode, and set up strong passwords.

## 11. Audio and Video Encrypted Transmission

If your audio and video data contents are very important or sensitive, we recommend that you use encrypted transmission function, to reduce the risk of audio and video data being stolen during transmission.

Reminder: encrypted transmission will cause some loss in transmission efficiency.

### 12. Secure Auditing

- Check online users: we suggest that you check online users regularly to see if the device is logged in without authorization.
- Check equipment log: By viewing the logs, you can know the IP addresses that were used to log in to your devices and their key operations.

### 13. Network Log

Due to the limited storage capacity of the equipment, the stored log is limited. If you need to save the log for a long time, it is recommended that you enable the network log function to ensure that the critical logs are synchronized to the network log server for tracing.

## 14. Construct a Safe Network Environment

In order to better ensure the safety of equipment and reduce potential cyber risks, we recommend:

- Disable the port mapping function of the router to avoid direct access to the intranet devices from external network.
- The network should be partitioned and isolated according to the actual network needs. If there are no communication requirements between two sub networks, it is

suggested to use VLAN, network GAP and other technologies to partition the network, so as to achieve the network isolation effect.

• Establish the 802.1x access authentication system to reduce the risk of unauthorized access to private networks.

6	APPENDIX II DC 12V WIRE GAUGE AND TRANSMISSION DISTANCE	
REL	ATIONSHIP SHEET	. 13
7	APPENDIX IV WIRE GAUGE REFERENCE SHEET	. 14

## Welcome

Thank you for purchasing our speed dome!

Please read the following safeguards and warnings carefully before you install or use the product!

## **Important Safeguards and Warnings**

## **Safety Measures**

## 1. Qualified Engineer Needed

- The installation engineer or maintenance engineer shall have corresponding CCTV system installation certificate or maintenance qualification certificate.
- The installation engineer or maintenance engineer shall have qualification certificate for work at height.
- The installation engineer or maintenance engineer shall have the basic knowledge and operation technique for low-voltage cable layout and low-voltage electronic cable connection.
- Please read the installation manual carefully and keep it well for future reference,
- We are not liable for any problems caused by unauthorized modifications or attempted repair.

## 2. Lifting Appliance Requirement

- Please select the proper speed dome installation mode and use the lifting appliances at the safety environment.
- The lifting appliances shall have the enough capacity to reach the installation height.
- The lifting appliances shall have safe performance.

### The precaution measures include two types: Warning and Note.

- Warning: It is to alert you there is an optional risk of death or series injury!
- Note: It is to alert you there is an optional risk of damage or property loss!

## Warning

- 1. All installation and operation here should conform to your local electrical safety codes. We assume no liability or responsibility for all the fires or electrical shock caused by improper handling or installation.
- 2. Be sure to use all the accessories (such as power adapter) recommended by manufacturer.
- 3. Do not connect several speed domes to one power adapter. It may result in overheat or fire if it exceeds the rated load.
- 4. Before you connect the cable, install or uninstall, or begin the daily maintenance work, please turn off the power and unplug the power cable.
- 5. Please make sure the produce is secure firmly on the wall or the ceiling.
- 6. Please turn off the power and unplug the power cable, If there is any smoke, disgusting smell, or noise. Please contact your local retailer or customer service centre for help.
- 7. All the examination and repair work should be done by the qualified service engineers. We are not liable for any problems caused by unauthorized modifications or attempted repair.

## Note

## 1. Safety Transportation

- Heavy stress, violent vibration or water splash are not allowed during transportation, storage and installation.
- This series product must use split type package during the transportation.
- We are not liable for any damage or problem resulting from the integrated package during the transportation.

## 2. When device is malfunction

Shut down the device and disconnect the power cable immediately if there is smoke, abnormal smell or abnormal function. Please contact your local retailer ASAP.

## 3. Do not try to dismantle or modify the device

- There is risk of personal injury or device damage resulting from opening the shell.
- Please contact your local retailer if there is internal setup or maintenance requirement.
- We are not liable for any problems caused by unauthorized modifications or attempted repair.

## 4. Do not allow other object falling into the device

- Please make sure there is no metal or inflammable, explosive substance in the speed dome.
- The above mentioned objects in the device may result in fire, short-circuit or damage.
- Please shut down the device and disconnect the power cable if there is water or liquid falling into the camera. Please contact your local retailer ASAP.
- Please pay attention to the camera. Avoid the sea water or rain to erode the camera.

## 5. Handle carefully

Do not allow this series product fall down to the ground. Avoid heavy vibration.

## 6. Installation Environment Requirement

- This series speed dome should be installed in a cool, dry place away from direct sunlight, inflammable, explosive substances and etc.
- This series product shall be away from the strong electromagnetism radiant, please keep it away from wireless power, TV transmitter, transformer and etc.

## 7. Daily Maintenance

- Please use the soft cloth to clean dust on the shell, or you can use soft cloth with cleaning liquid to clean the shell and then use soft cloth to make it dry.
- Do not use gasoline, dope thinner or other chemical material to clean the shell. It may result in shell transfiguration or paint flake.
- Do not allow the plastic or rubber material to touch the shell for a long time. It may result in paint flake.

## 1 Installation Preparation

## 1.1 Basic Requirements

- All installation and operation here should conform to your local electrical safety codes, fire protection regulations and relevant regulations.
- Make sure if the application scenarios of speed dome conforms to the installation requirements. Please contact your local retailer if you have any confusion.
- Please use the product according to the operating environment.
- Please keep the original packing material well after opening the package, which is used to pack speed dome and send it back for repair in case problems happen.

## 1.2 Installation Check

- Please make sure the installation environment has enough space to install the speed dome and its corresponding mounting components.
- Please make sure the ceiling and wall can sustain 8X weight of the speed dome and its mounting components.
- Please make sure the wall is thick enough to install expansion bolts (Users need to purchase expansion bolts separately).
- It needs to guarantee that the mounting height has to be more than 6m if the speed dome is laser speed dome.

## 1.2.1 Select Needed Power Supply Cable According to Transmission Distance

Refer to appendix II for DC 12V power supply device.

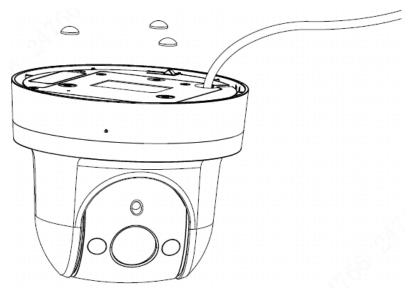

## 2 Speed Dome Installation

## 2.1 Check Accessories

Before the installation, please check the accessories one by one according to the packing list. Please make sure all the components listed are included.

## 2.2 Open Device

Open the package and then take out the device. See Figure 2-1.

## 2.3 Use Instruction of Installation Position Map

The installation position map is used for drilling position on the hard ceiling and confirming the location of cable exit. The beeline part is the mechanical blind spot. Please paste it according to your actual requirement to avoid mechanical blind spot. See Figure 2-2.

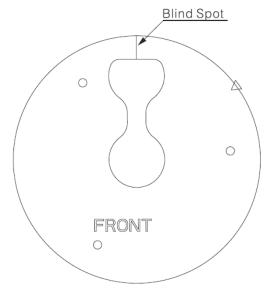

Figure 2-2

## 2.4 Micro SD Card Slot, Reset Button and WPS Button Location

Micro-SD card slot, reset button and WPS button are shown in Figure 2-3, the way of using each component is shown as follows:

- Please make sure SD card is in the non-read or write status when removing Micro-SD card, otherwise it may cause data loss and SD card damage.
- Press the WPS button on the speed dome and router respectively to make the speed dome connect to network.
- Press the WPD button for at least 10s, and then the system config info will be restored to factory default settings.

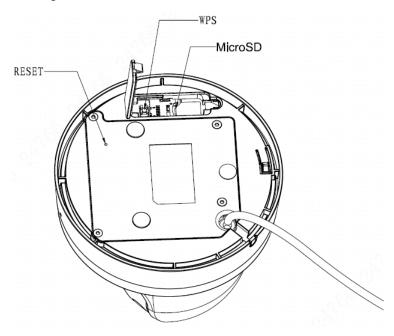

Figure 2-3

## 2.5 Speed Dome Cable

### 2.5.1 Cable Description

The camera is equipped with a multi-functional combination cable by default, which includes power cable, video cable, audio cable, RS485 control cable, alarm cable, network cable, high-frequency cable and optical fiber cable etc. The cable detail is shown in Figure 2-4.

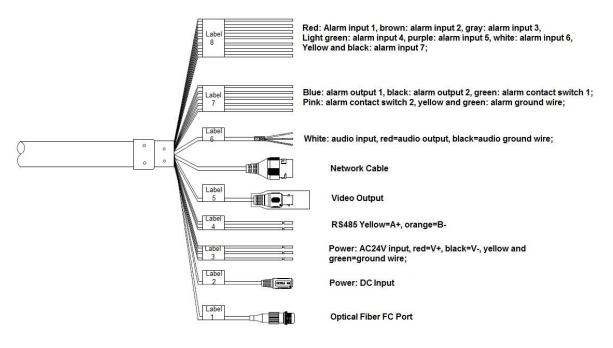

Figure 2-4

### Note

Different models have different cable combinations; please refer to the actual cable combination for more details. The cable combination is the most comprehensive example shown in the figure above.

## 2.5.2 Cable Connection

Buckle the safety hook of speed dome on the quick mount connector; connect the integrated cable reserved by wall-mounted bracket to the corresponding power cable, video cable, audio cable, RS485 control cable, alarm cable, network cable, high-frequency cable and optical fiber cable etc. of the multi-functional combination cable of the speed dome (according to requirement), and then use insulated rubber tape to twine the cable connection well to make it waterproof. Refer to Figure 2-4 for more details.

### 2.5.3 Alarm Cable Connection

The alarm cable connection mode and config steps are shown as follows:

### Step 1

Connect alarm input device to the ALARM\_IN and ALARM\_GND of the user cable.

### Step 2

Connect alarm output device to the ALARM\_OUT and ALARM\_COM of the user cable, alarm output is the relay switch output.

### Step 3

Open the device WEB interface, make corresponding settings to the alarm input and output device in "Setup > Event > Alarm Setup". The alarm input of WEB is corresponding to the alarm input of the user cable. It is to set the corresponding NO and NC output according to the high and low level signal generated by alarm input device when alarm triggers.

#### Step 4

Set the alarm output situation of user cable on the WEB.

## 2.5.4 Connect Speed Dome GND Cable

Connect the power line YELLOW/GREEN of the combination cable to the lightning protection device, and make sure the lightning protection device is well grounded.

## 3 Ceiling-mounted Installation

## 3.1 Mounting Components

The ceiling-mounted installation of the device is shown in Figure 3-1.

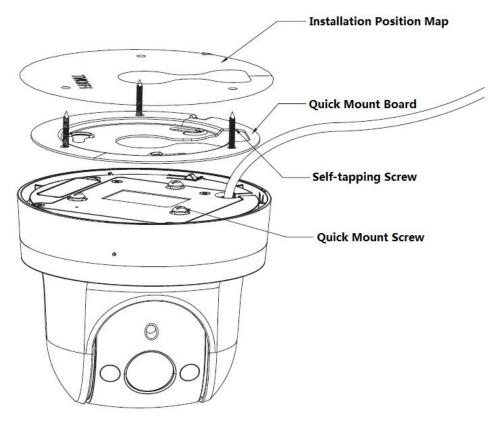

Figure 3-1

## 3.2 Ceiling-mounted Installation Steps

## 3.2.1 Installation Conditions

The ceiling-mounted speed dome can be installed on the hard ceiling structure in the indoor environments. The ceiling needs to satisfy the following conditions.

- The ceiling is thick enough to install expansion bolts.
- The ceiling can sustain at least 8X weight of the speed dome.

## 3.2.2 Installation Steps

There are two wiring modes for ceiling-mounted installation.

- It supports open wiring from side of the device if it fails to dig holes on the ceiling.
- It supports concealed wiring inside the ceiling if it digs holes on the ceiling.

Here it is to take concealed wiring mode inside the ceiling as an example and introduce the installation steps of the speed dome. The steps are shown in Figure 3-2.

### Step 1

Confirm mounting location and cable exit mode, take installation position map as template, mark the punching position on the ceiling and dig holes, and then insert three plastic expansion bolts into the holes you have dug.

Step 2

Twist the three quick mount screws into the holes of pedestal, lay the outgoing line well according to the wiring mode, and then use three self-tapping screws to fix the quick mount metal plate on the ceiling, twist the screws into the expansion bolts, which is shown in Figure 3-2.

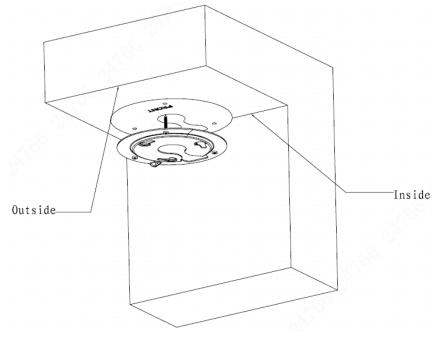

Figure 3-2

#### Step 3

Align the three quick mount screws at the bottom of the pedestal and the concave with the three holes and the U slot at the quick mount metal plate respectively. Turn the speed dome anticlockwise to secure the speed dome and the metal plate closely. Please refer to Figure 3-3.

#### Note

When the arrow on the installation position map turns to the character "open" at the side of the speed dome, you can see the speed dome and then metal plate are closely secured.

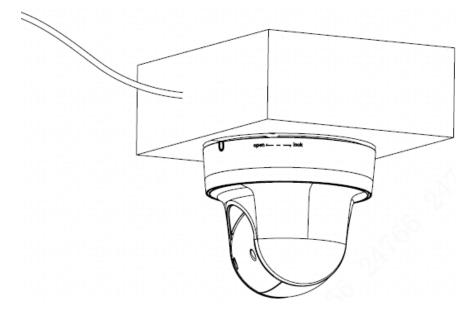

Figure 3-3

## 4 Wall-mounted Installation

## 4.1 Mounting Component

The wall-mounted bracket is shown in Figure 4-1.

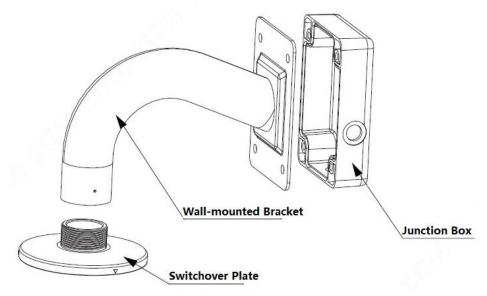

Figure 4-1

## 4.2 Wall-mounted Installation Steps

## 4.2.1 Installation Conditions

The wall-mounted speed dome can be installed on the hard wall structure in the indoor environments. The wall needs to satisfy the following conditions.

- The wall is thick enough to install expansion bolts.
- The wall can sustain at least 8X weight of the speed dome and bracket.

## 4.2.2 Installation Steps

## Step 1

Take the mounting holes on the bottom of junction box as template, mark the punching position on the wall and dig holes, then insert the expansion bolts into the holes which have been dug. Use four hex nuts and flat gasket to twist the junction box into the expansion bolts which have been well dug. Please refer to Figure 4-2 for more details.

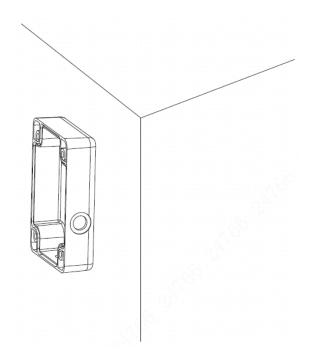

Figure 4-2

#### Step 2

Twist the switchover plate into the internal thread of the wall-mounted bracket, twist screws into the holes on the right of wall-mounted bracket to fix the switchover plate, it has to be tightened completely, otherwise it will cause the risk of device falling due to improper installation. Use three M4 screws to fix the quick mount metal plate on the switchover plate, which is shown in Figure 4-3.

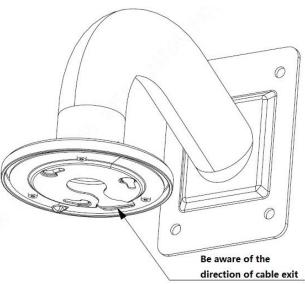

Figure 4-3

### Step 3

Insert three quick mount screws into the holes on the pedestal; insert the device combination cable into the switchover plate and cylindrical end of wall-mounted bracket and pull it out from the other end of the wall-mounted bracket. Align the three quick mount screws and concave on the device pedestal with three holes and U groove on the metal plate, rotate the speed dome anticlockwise to secure the speed dome and metal plate closely, which is shown in Figure 4-4.

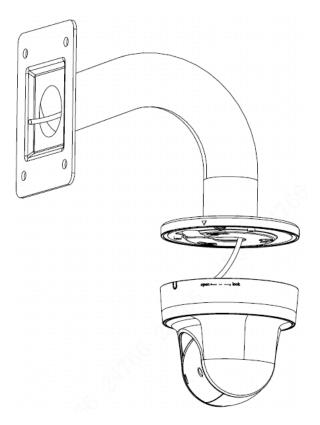

Figure 4-4

### Step 4

Complete cable connection in the junction box and use four M4 screws to fix the wall-mounted bracket into the junction box, so far the speed dome installation has been completed, which is shown in Figure 4-5.

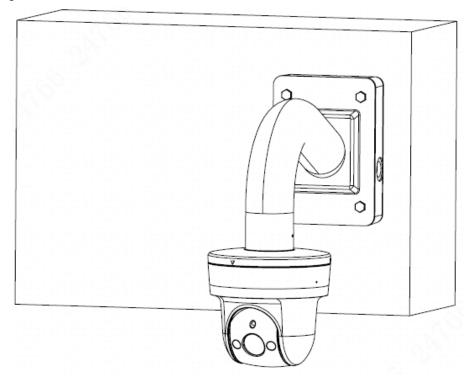

Figure 4-5

# 5 APPENDIX I LIGHTENING PROTECTION AND SURGE PROTECTION

## 5.1 Outdoors

This series speed dome adopts TVS lighting protection technology. It can effectively prevent damages from various pulse signals below 6000V, such as sudden lighting and surge. While maintaining your local electrical safety code, you still need to take necessary precaution measures when installing the speed dome in the outdoor environment.

- The distance between the signal transmission cable and high-voltage device (or high-voltage cable) shall be at least 50 meters.
- Outdoor cable layout shall go under the penthouse if possible.
- For vast land, please use sealing steel tube under the land to implement cable layout and connects one point to the earth. Open floor cable layout is forbidden.
- In area of strong thunderstorm hit or near high sensitive voltage (such as near high-voltage transformer substation), you need to install additional high-power thunder protection device or lightning rod.
- The thunder protection and earth of the outdoor device and cable shall be considered in the building whole thunder protection and conform to your local national or industry standard.
- System shall adopt equal-potential wiring. The earth device shall meet anti-jamming and at the same time conforms to your local electrical safety code. The earth device shall not short circuit to N (neutral) line of high voltage power grid or mixed with other wires. When connect the system to the earth alone, the earth resistance shall not be more than 4 Ω and earth cable cross-sectional area shall be no less than 25 mm<sup>2</sup>. See Figure 5-1.

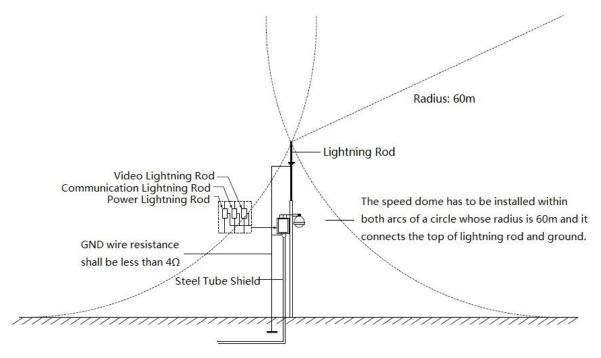

Figure 5-1

## 5.2 Indoors

The yellow and green GND wire or GND screw of the speed dome should be reliably connected by several strands of copper wire with no less than 25mm<sup>2</sup> and indoor equipotential GND terminal. Please refer to Figure 5-2 for lightningproof installation mode.

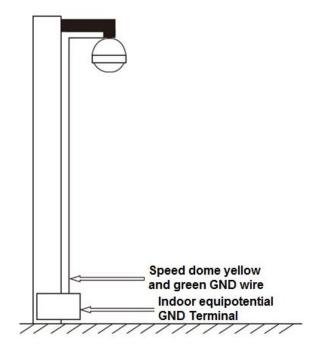

Figure 5-2

## 6 APPENDIX II DC 12V WIRE GAUGE AND TRANSMISSION

## DISTANCE RELATIONSHIP SHEET

It is the recommended transmission distance when the cable diameter is fixed and the DC12V power consumption is below 10%. For the DC device, the max permission voltage power consumption is 10%. The cables used in the following sheet are all copper wires. (The resistivity

Feet (m) w	0.8000	1.000	1.250	2.000
5	122.13 (37.23)	190.83 (58.16)	298.17 (90.88)	763.31 (232.66)
10	61.06 (18.61)	95.41 (29.08)	149.08 (45.44)	381.66 (116.33)
