Digital Indoor Monitor (Model G)

Quick Start Guide

V1.0.1

Foreword

General

This manual introduces basic operations of the digital indoor monitor (hereinafter referred to as "VTH").

Models

- Non 2-wire VTH that supports both Wi-Fi and PoE.
- Non 2-wire VTH that only supports PoE.
- 2-wire VTH that supports Wi-Fi.

Safety Instructions

The following categorized signal words with defined meaning might appear in the manual.

Signal Words	Meaning
DANGER	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.
WARNING	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
CAUTION	Indicates a potential risk which, if not avoided, could result in property damage, data loss, lower performance, or unpredictable result.
TIPS	Provides methods to help you solve a problem or save you time.
NOTE	Provides additional information as the emphasis and supplement to the text.

Revision History

Version	Revision Content	Release Date
V1.0.1	Manual optimization.	February 2022
V1.0.0	First release.	November 2021

Privacy Protection Notice

As the device user or data controller, you might collect the personal data of others such as their face, fingerprints, and license plate number. You need to be in compliance with your local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures which include but are not limited: Providing clear and visible identification to inform people of the existence of the surveillance area and provide required contact information.

About the Manual

- The manual is for reference only. Slight differences might be found between the manual and the product.
- We are not liable for losses incurred due to operating the product in ways that are not in compliance with the manual.
- The manual will be updated according to the latest laws and regulations of related jurisdictions. For detailed information, see the paper user's manual, use our CD-ROM, scan the QR code or visit our official website. The manual is for reference only. Slight differences might be found between the electronic version and the paper version.
- All designs and software are subject to change without prior written notice. Product updates might result in some differences appearing between the actual product and the manual. Please contact customer service for the latest program and supplementary documentation.
- There might be errors in the print or deviations in the description of the functions, operations and technical data. If there is any doubt or dispute, we reserve the right of final explanation.
- Upgrade the reader software or try other mainstream reader software if the manual (in PDF format) cannot be opened.
- All trademarks, registered trademarks and company names in the manual are properties of their respective owners.
- Please visit our website, contact the supplier or customer service if any problems occur while using the device.
- If there is any uncertainty or controversy, we reserve the right of final explanation.

Important Safeguards and Warnings

This section introduces content covering the proper handling of the device, hazard prevention, and prevention of property damage. Read carefully before using the device, comply with the guidelines when using it, and keep the manual safe for future reference.

Operation Requirements

- Check whether the power supply is correct before use.
- Do not unplug the power cord on the side of the device while the adapter is powered on.
- Operate the device within the rated range of power input and output.
- Transport, use and store the device under allowed humidity and temperature conditions.
- Do not drop or splash liquid onto the device, and make sure that there is no object filled with liquid on the device to prevent liquid from flowing into it.
- Do not disassemble the device without professional instruction.

Installation Requirements

- Do not connect the power adapter to the device while the adapter is powered on.
- Strictly comply with the local electric safety code and standards. Make sure the ambient voltage is stable and meets the power supply requirements of the device.
- Do not connect the device to two or more kinds of power supplies, to avoid damage to the device.
- Improper use of the battery might result in a fire or explosion.

- Personnel working at heights must take all necessary measures to ensure personal safety including wearing a helmet and safety belts.
- Do not place the device in a place exposed to sunlight or near heat sources.
- Keep the device away from dampness, dust, and soot.
- Install the device on a stable surface to prevent it from falling.
- Install the device in a well-ventilated place, and do not block its ventilation.
- Use an adapter or cabinet power supply provided by the manufacturer.
- Use the power cords that are recommended for the region and conform to the rated power specifications.
- Make sure the power supply meets the SELV (Safety Extra Low Voltage) requirements, and rated voltage conforms to the IEC60065, IEC60950-1 or IEC62368-1 standard. The requirements of the power supply are subject to the device label.
- The device is a class I electrical appliance. Make sure that the power supply of the device is connected to a power socket with protective earthing.

Table of Contents

Foreword ..... **I**
Important Safeguards and Warnings ..... **III**
1 Structure **1**
1.1 Front Panel 1
1.2 Rear Panel (2-wire) 2
1.3 Rear Panel (non 2-wire) 3

4.3.2 Configuring SIP Server 17
4.3.3 Configuring VTH 18
4.3.4 Configuring VTO 19
5 Commissioning **21**
5.1 VTO Calling VTH 21
5.2 VTH Monitoring VTO 21
Appendix 1 Cybersecurity Recommendations **23**

1 Structure

The VTHs have the same front panel but differ in the ports in the rear panel. Some support 2-wire and others does not.

Slight differences might be found in the ports of the actual product.

1.1 Front Panel

Figure 1-1 Front panel

1.2 Rear Panel (2-wire)

Figure 1-2 Rear panel for 2-wire model

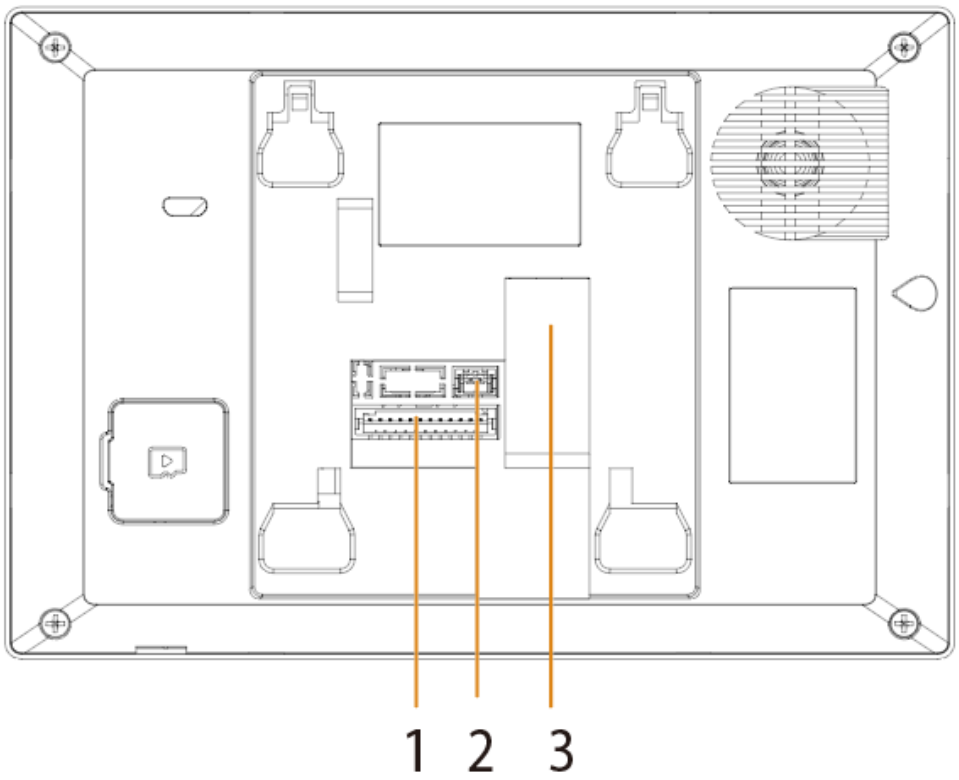

Table 1-1 Components

No.	Name
1	Alarm port
2	2-wire port
3	Network port

1.3 Rear Panel (non 2-wire)

Figure 1-3 Rear panel for non 2-wire model

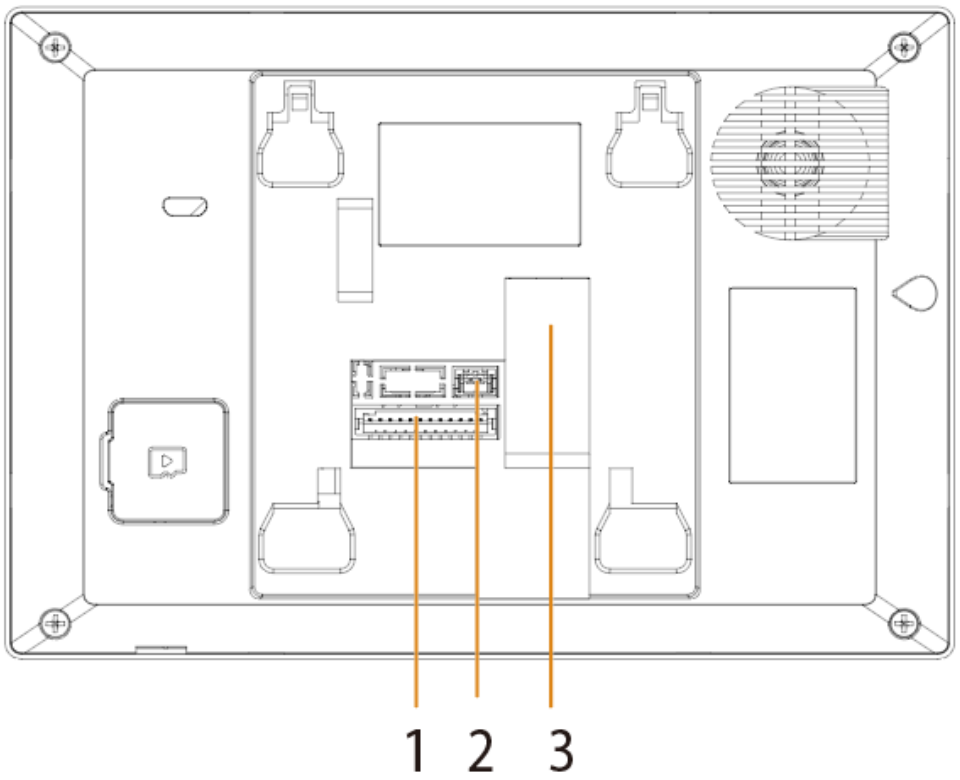

Table 1-2 Components

No.	Name
1	Alarm port
2	Power input port
3	Network port

2 Installation

2.1 Preparations

⚠

- Do not install the VTH in harsh environment with condensation, high temperature, dust, corrosive substance and direct sunlight.
- In case of abnormality after powering on the VTH, cut off the power supply at once, and unplug the network cable. Power on after troubleshooting.
- Installation should be done by professional teams. Do not dismantle or repair the device by yourself in case of device failure. Contact after-sales service if you need any help.

2.2 Wall-mounted Installation

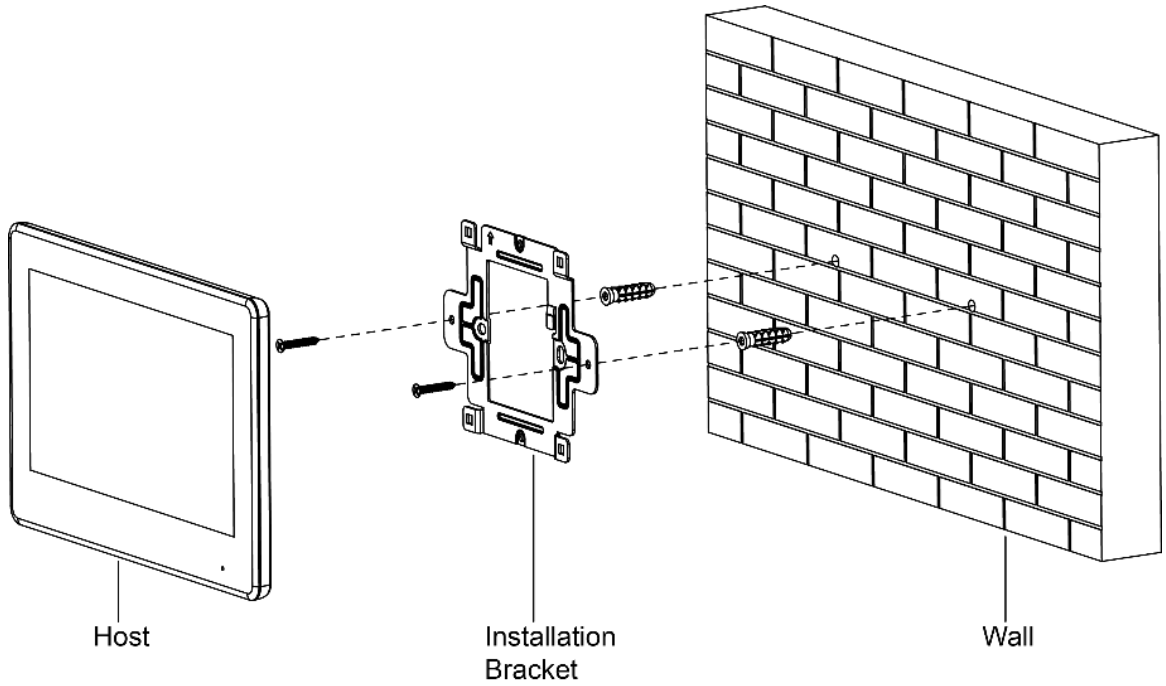
Directly install the VTH with a bracket onto a wall, which is suitable for all types of devices.

Step 1 Drill holes in the wall according to hole positions of the installation bracket.

Step 2 Fix the installation bracket on the wall with screws.

Step 3 Put the top of the device into the top of the installation bracket, and then push in the bottom of the VTH.

Figure 2-1 Wall-mounted installation



3 VTO Configuration

This chapter provides a step-by-step configuration of the VTO. Follow the instructions below to get started.

The snapshots are for reference only and slight differences might be found in the actual web page of the VTO depending on your model.

3.1 Configuration Tool

You can download the configuration tool VDPConfig and use it to configure and update multiple devices. For more details, see the corresponding user's manual.

3.2 Initialization

For the first time login, you need to initialize the VTO.

Step 1 Power on the VTO.

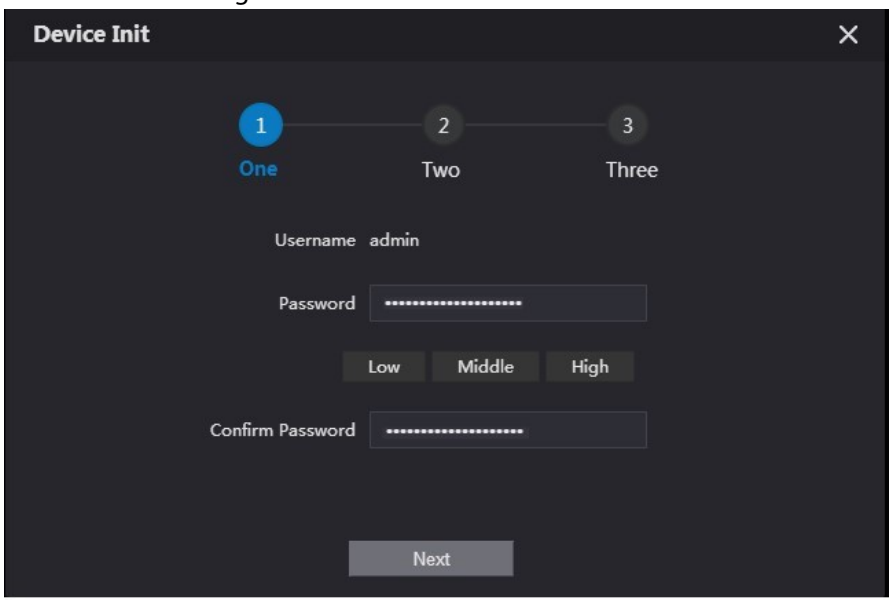
Step 2 Go to the default IP address (192.168.1.108) of the VTO in the browser address bar, and then press the Enter key to go to the web page of the VTO.

- The user name is admin by default.
- Make sure that the IP address of the PC is on the same network segment as the VTO.

Step 3 On the **Device Init** page, enter and confirm the password, and then click **Next**.

The password must consist of 8–32 non-blank characters and contain at least two types of the following characters: Uppercase, lowercase, numbers, and special characters (excluding ' " ; : &).

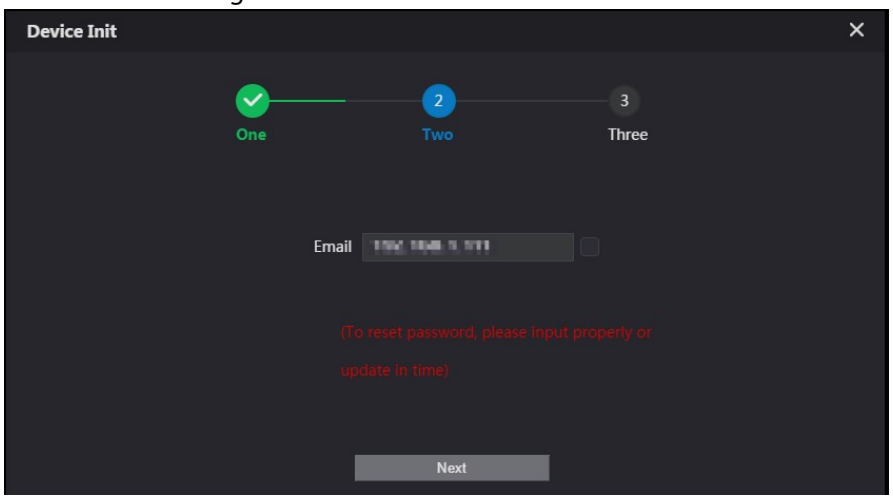
Figure 3-1 Device initialization



Step 4 Select the **Email** checkbox and enter email address.

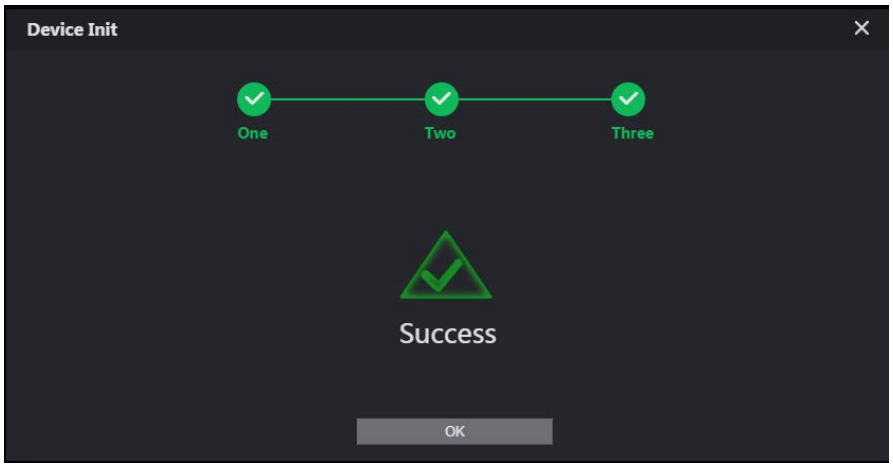
This helps you to reset your password when your password is lost or forgotten.

Figure 3-2 Set an email address



Step 5 Click **Next**.

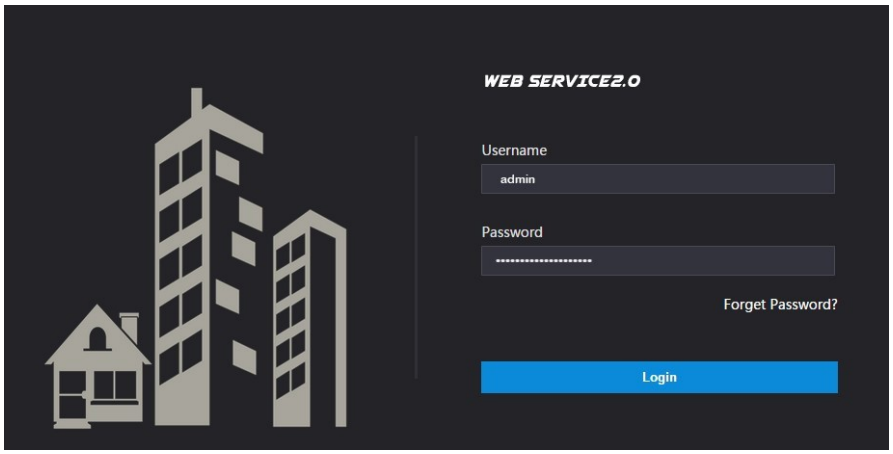
Figure 3-3 Initialization successful



Step 6 Click **OK**.

Enter username (admin by default) and the new password to log in to the web page.

Figure 3-4 Login page



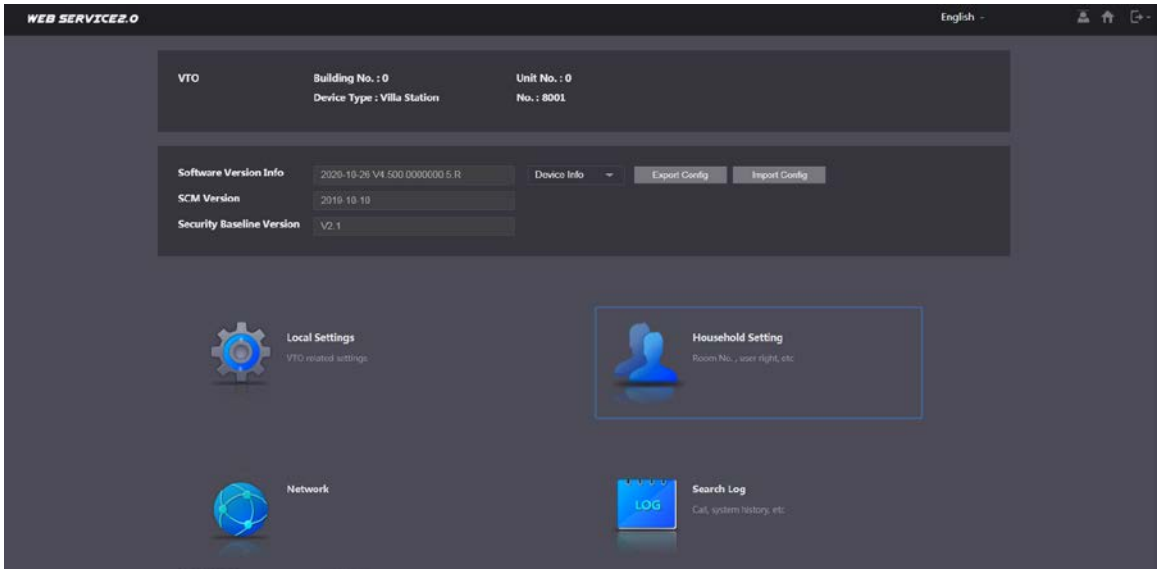
3.3 Configuring VTO Number

Numbers can be used to distinguish each VTO, and we recommend you set it according to the unit or building number.

- You can change the number of a VTO when it is not working as the SIP server.
- A VTO number can contain up to 5 numbers, and it cannot be the same as any room number.

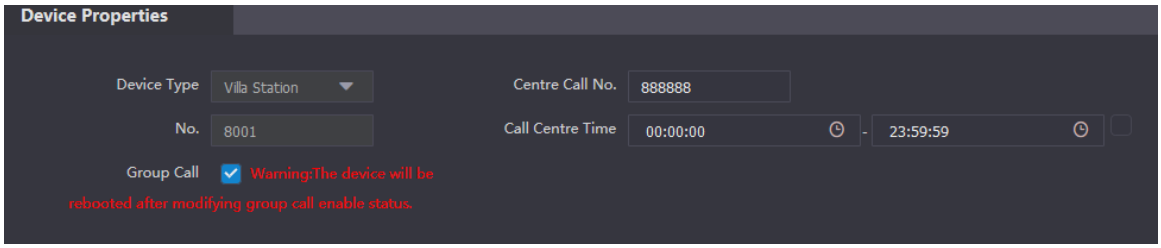
Step 1 Log in to the VTO web page.

Figure 3-5 Home page



Step 2 Select **Local Settings > Basic**.

Figure 3-6 Device properties

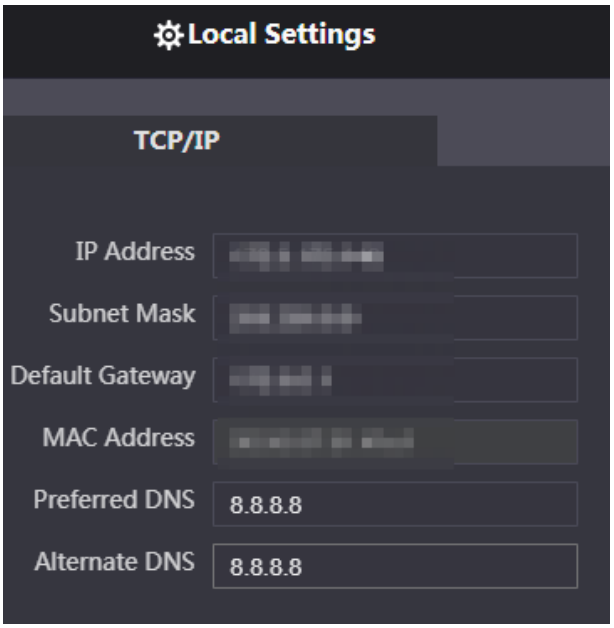


Step 3 Enter the number in **No.**, and then click **Confirm**.

3.4 Configuring Network Parameters

Step 1 Select **Network > Basic**.

Figure 3-7 TCP/IP information



Step 2 Enter each parameter, and then click **Save**.

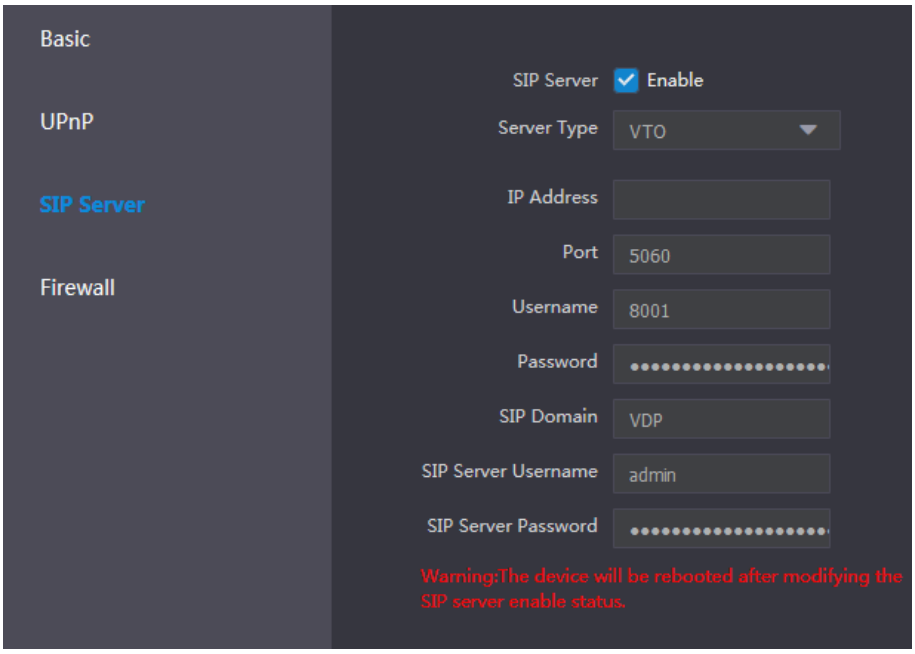
The VTO will automatically restart. You need to add the IP address of your PC to the same network segment as the VTO to log in again.

3.5 Configuring SIP Server

When connected to the same SIP server, all VTOs and VTHs can call each other. You can use a VTO or other servers as the SIP server.

Step 1 Select **Network > SIP Server**.

Figure 3-8 SIP server



Step 2 Select the server type as needed.

- If the current VTO works as the SIP server, enable **SIP Server**, and then click **Save**.

The VTO will automatically restart, and then you can add other VTOs and VTHs to this VTO.

If the current VTO does not work as the SIP server, do not enable **SIP Server**. Otherwise the connection with this VTO will fail.

- If other VTOs work as the SIP server, set **Server Type** as VTO, and then configure the parameters.

Table 3-1 SIP server configuration

Parameter	Description
IP Addr.	The IP address of the VTO that works as the SIP server.
Port	• 5060 by default when VTO work as SIP server. • 5080 by default when the platform works as SIP server.
Username	Leave it as default.
Password	
SIP Domain	Leave it as default.
SIP Server Username	SIP server web page login username and password.
SIP Server Password	

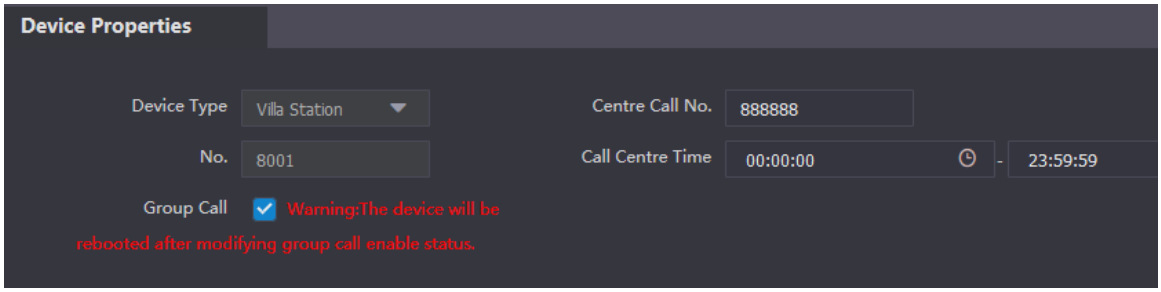
- If other servers work as the SIP server, set **Server Type** as needed, and then see the corresponding manual for details.

3.6 Configuring Call Number and Group Call

To dial and call a VTO, you need to configure the call number on each VTO that works as the phone number.

Step 1 Select **Local Settings > Basic**.

Figure 3-9 Device properties



Step 2 In the **No.** input box, enter the room number you need to call, and then click **Confirm** to save. Repeat this operation on every villa door station (VTO) web page.

On the SIP server, you can enable group call function. When calling a main VTH, all extension VTH will also receive the call.

The VTO will restart after enabling or disabling the group call function.

Step 3 Log in to the SIP server web page, and then select **Local Settings > Basic**.

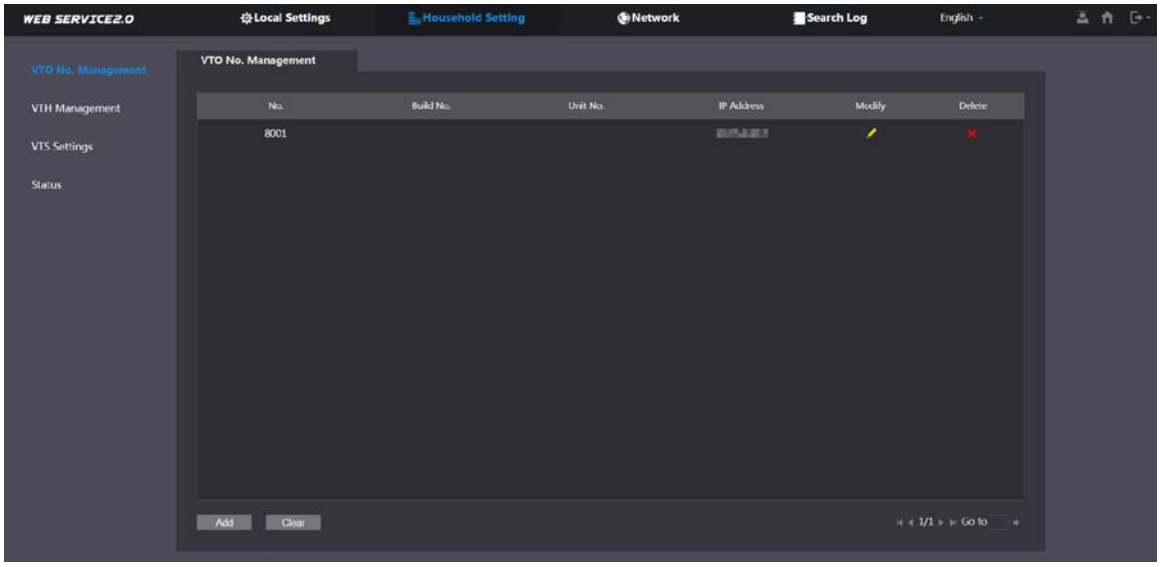
Step 4 Enable **Group Call**, click **Confirm**, and then the VTO will restart.

3.7 Adding VTOs

You can add VTOs to the SIP server, and all the VTOs connected to the same SIP server can make video call to each other. This section is applicable when a VTO works as the SIP server, and if you are using other servers as the SIP server, see the corresponding manual for the detailed configuration.

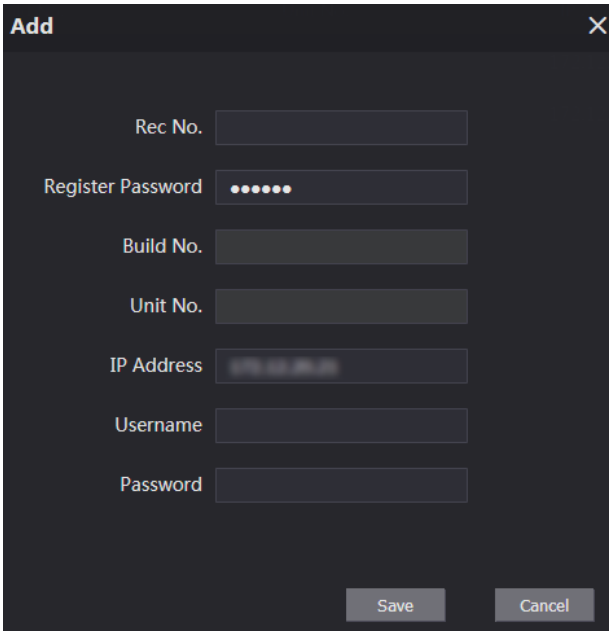
Step 1 Log in to the web page of the SIP server, and then select **Household Setting > VTO No. Management**.

Figure 3-10 VTO No. management



Step 2 Click **Add**.

Figure 3-11 Add VTO



Step 3 Configure the parameters.

The SIP server must be added.

Table 3-2 Add door stations (VTO)

Parameter	Description
Rec No.	VTO number.

Register Password	Keep the default value.
Build No.	Available only when other servers work as the SIP server.
Unit No.	
IP Address	VTO IP address.
Username	VTO web page login username and password.
Password	

Step 4 Click **Save**.

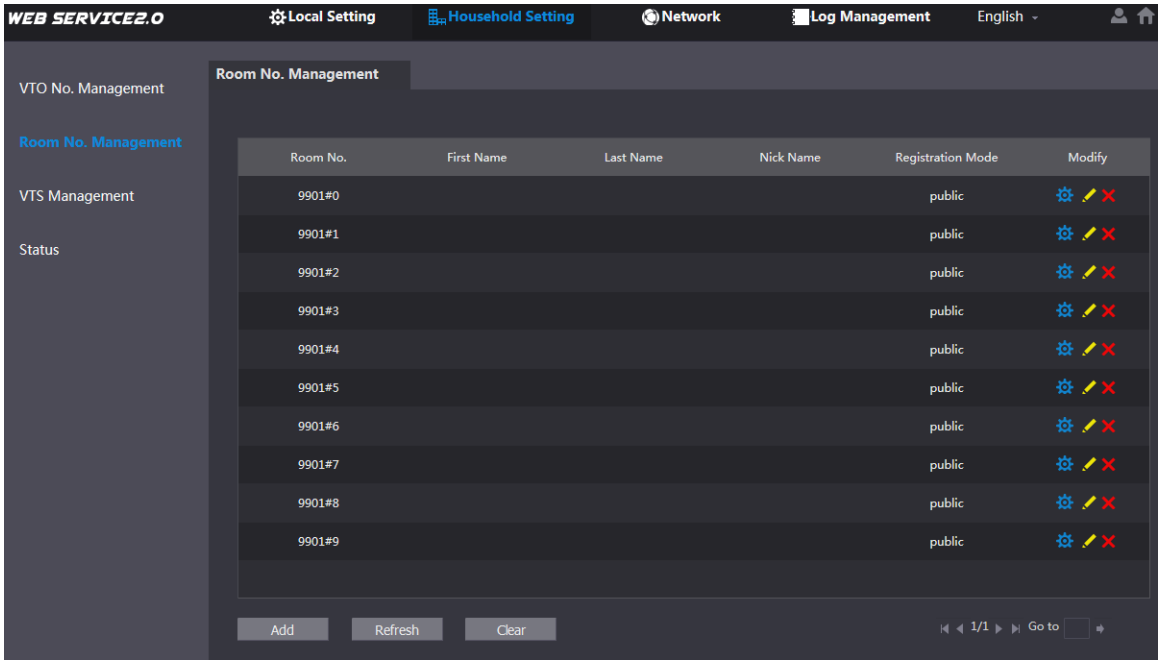
3.8 Adding Room Number

You can add room numbers to the SIP server, and then configure the room number on VTHs to connect them to the network. This section is applicable when a VTO works as the SIP server, and if you use other servers as the SIP server, see the corresponding manual for the detailed configuration.

The room number can contain 6 digits of numbers or letters or their combination at most, and it cannot be the same as any VTO number.

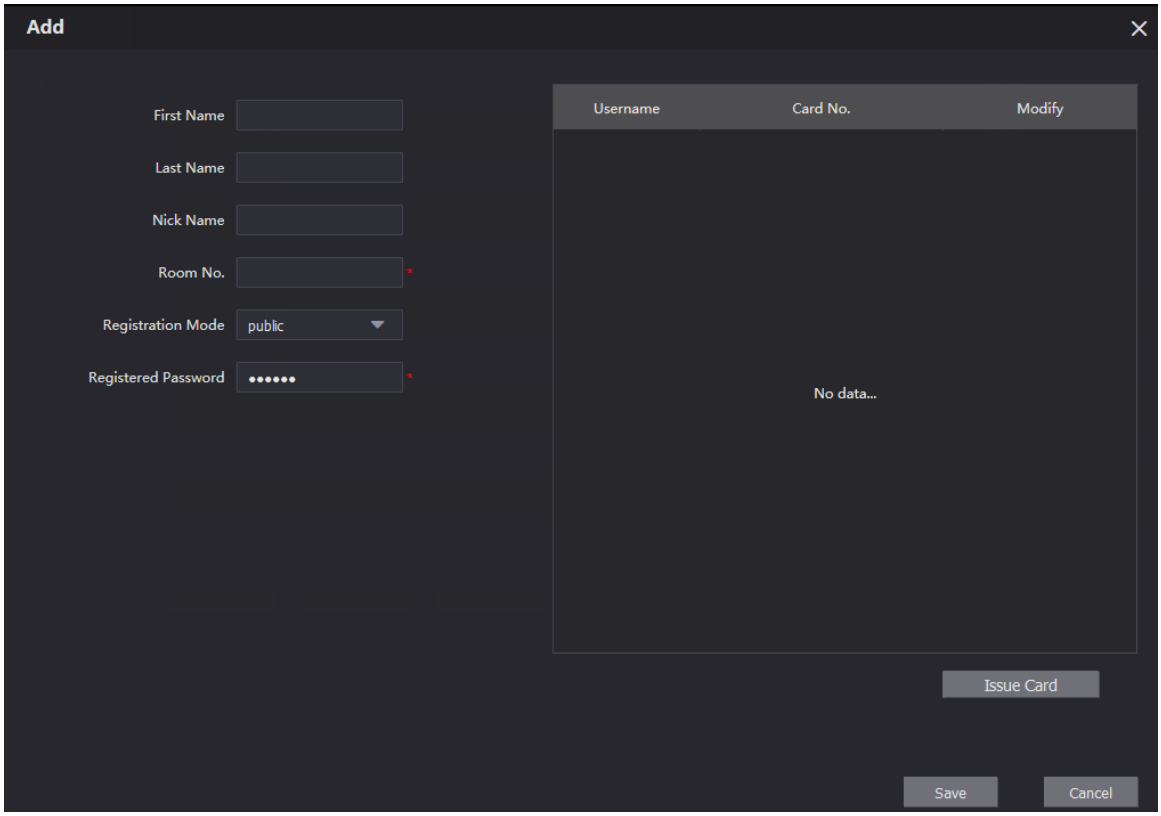
Step 1 Log in to the webpage of the SIP server, and then select **Household Setting > Room No. Management**.

Figure 3-12 Room number management



Step 2 Click **Add**.

Figure 3-13 Add a single room number



Step 3 Configure room information.

Table 3-3 Room information

Parameter	Description
First Name	Information used to differentiate each room.
Last Name	
Nick Name	
Room No.	Room number. ● When there are multiple VTHs, the room number for the main VTH should end with #0, and the room numbers for extension VTHs with #1, #2… ● You can configure up to 9 extension VTHs for one main VTH.
Registration Mode	Select **public**.
Registered Password	Keep the default value.

Step 4 Click **Save**.

Click to modify room information, and click to delete the room.

4 VTH Configuration

This chapter introduces the configuration of the VTH and how to achieve the intercom function. Follow the instructions below to get started.

4.1 Before You Begin

- Make sure that there is no short or open circuit in the VTO and VTH.
- Plan IP and number (working as a phone number) for each VTO and VTH. Make sure that the VTH and VTO are on the network segment.

4.2 Quick Configuration

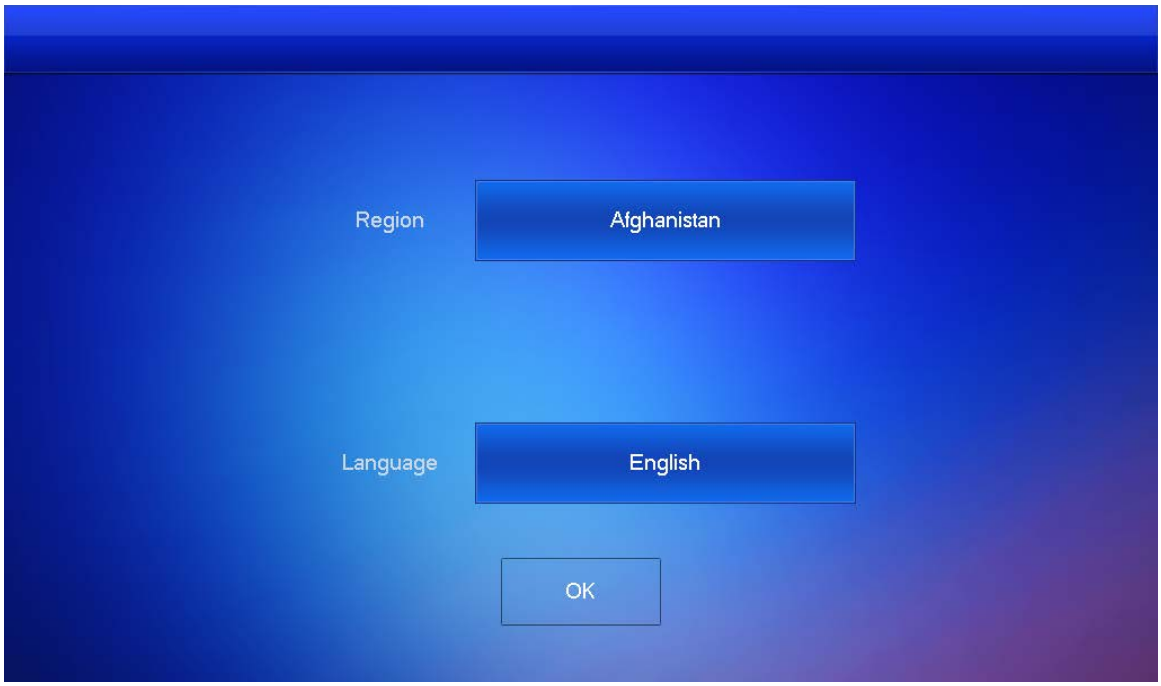
For the first-time login, you could initialize and configure the VTH through quick configuration.

The quick configuration enables you to configure the parameters of the VTO, VTH and the SIP server at once. If you want to modify the parameters, see "4.3 Manual Configuration ".

Step 1 Power on the VTH.

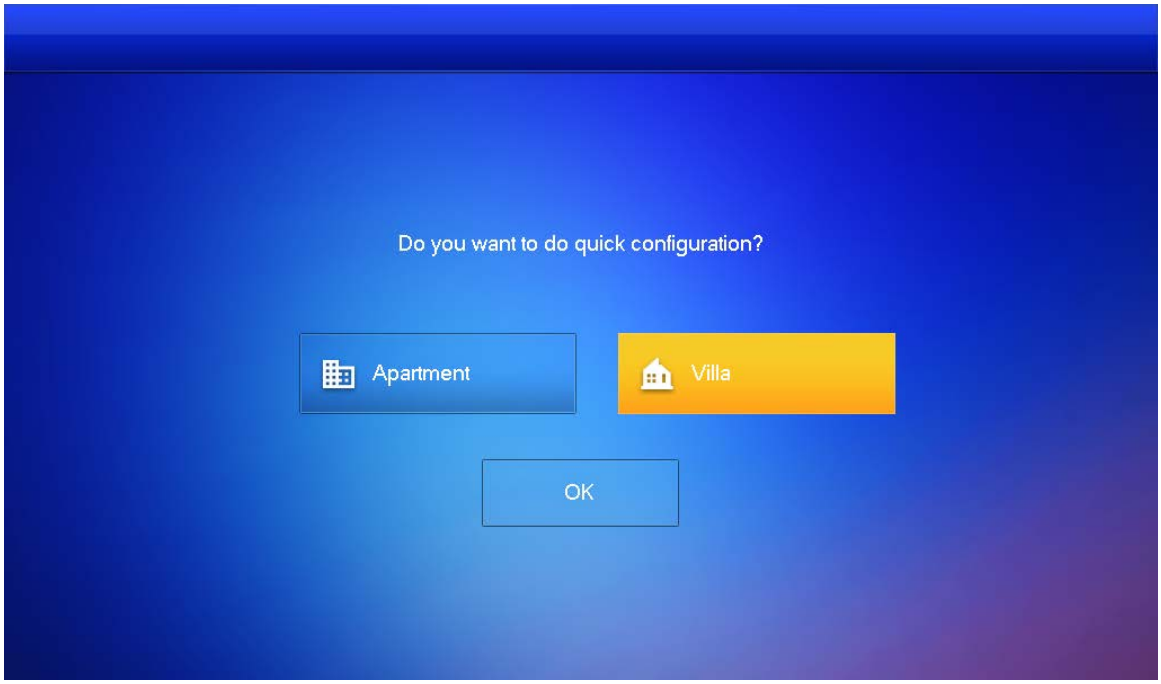
Step 2 Select a region and language, and then tap **OK**.

Figure 4-1 Region and language



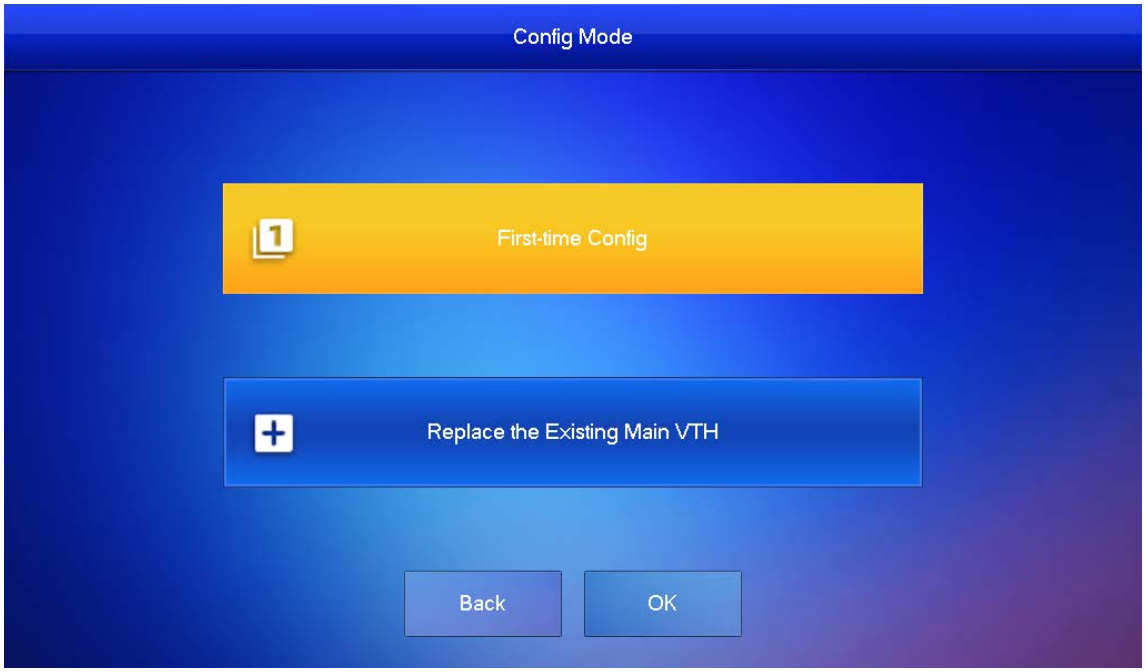
Step 3 Set the quick configuration type as **Villa**, and then tap **OK**.

Figure 4-2 Quick configuration



Step 4 Select **First-time Config**, and then tap **OK**.

Figure 4-3 Config mode



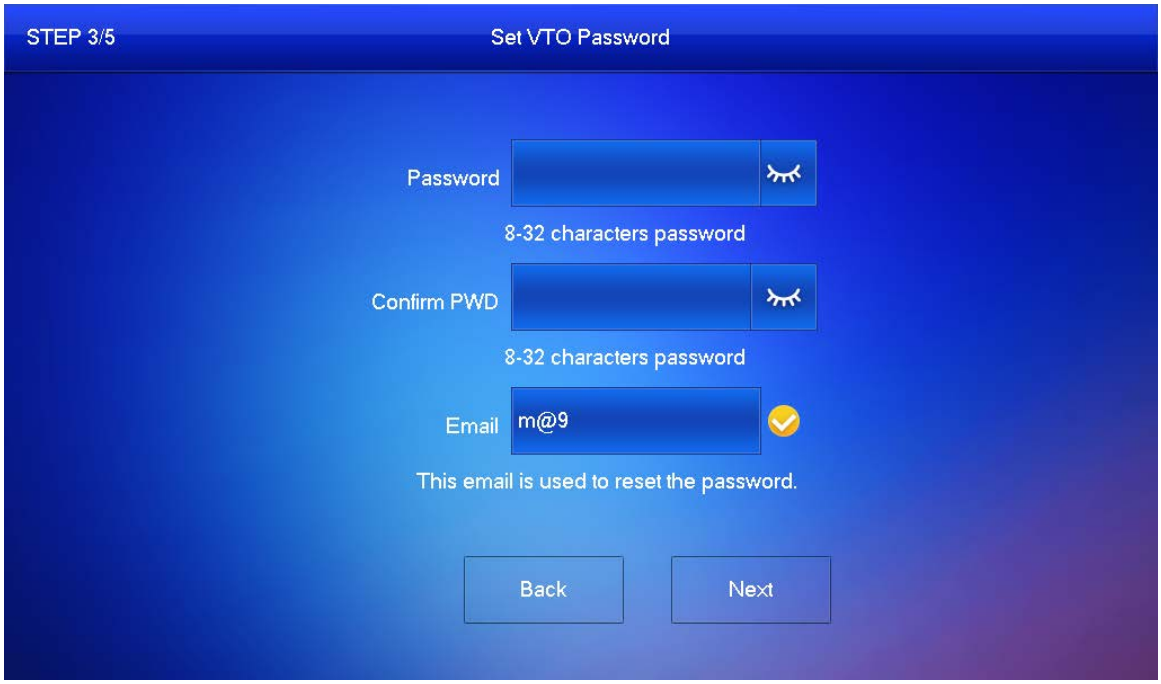
Step 5 Select **Static IP**, enter your planned VTH IP, net mask and gateway, and then tap **Next**.

Step 6 On the **Set VTH Password** screen, enter and confirm the password, and enter the email address, and then tap **Next**.

Figure 4-4 Set password for VTH

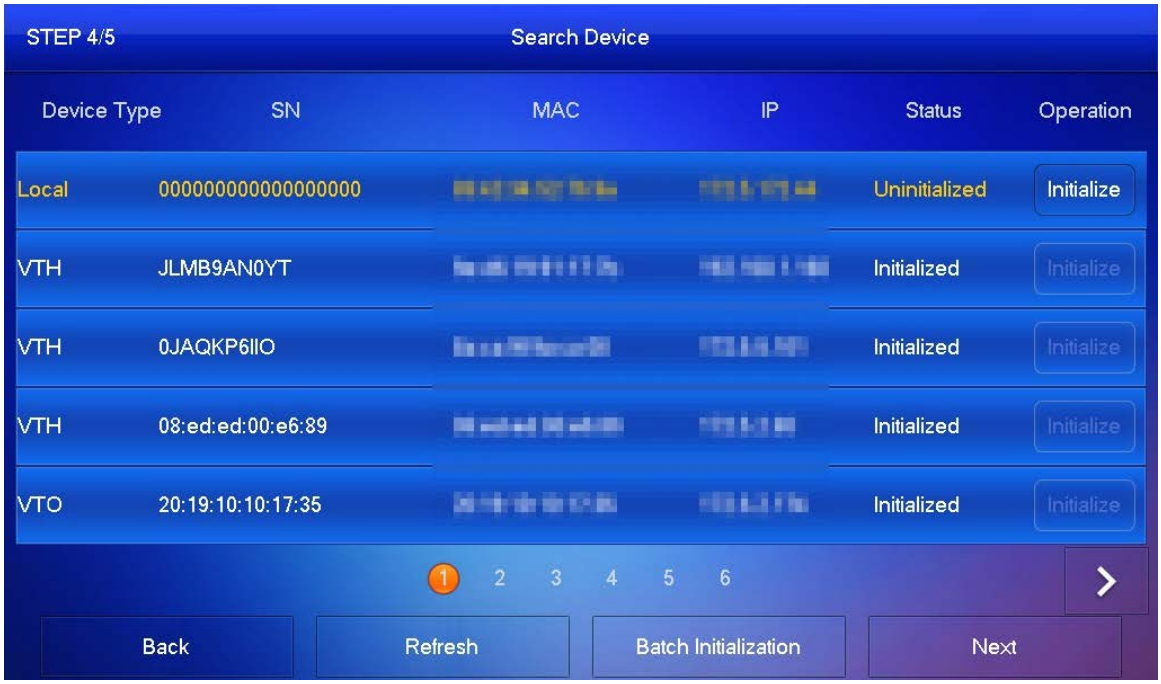
Step 7 On the **Set VTO Password** screen, enter the password of VTO and confirm it, and then tap **Next**.

Figure 4-5 Set password for VTO



Step 8 Tap **Initialize** to complete the initialization of the VTO and the main VTH, and then tap **Next**. You need to make sure that the IP addresses of the VTH and VTO on the same network segment. Otherwise, VTH cannot obtain the information of VTO after configuration.

Figure 4-6 Initialize the devices



Step 9 Tap **One-key Config** to finish the configuration of the VTO and VTH, as well as the SIP server. The status bar will suggest whether your configuration is successful.

4.3 Manual Configuration

You could manually configure the parameters you want to modify.

4.3.1 Configuring Network Parameters

You can choose to connect the VTH to the network either through WLAN or LAN.

4.3.1.1 WLAN

Step 1 Tap and hold **Setting** for about 3 seconds, and enter the password that you set for the VTH.

Step 2 Tap **Network > WLAN**.

Step 3 Enable OFF to see all the usable networks.

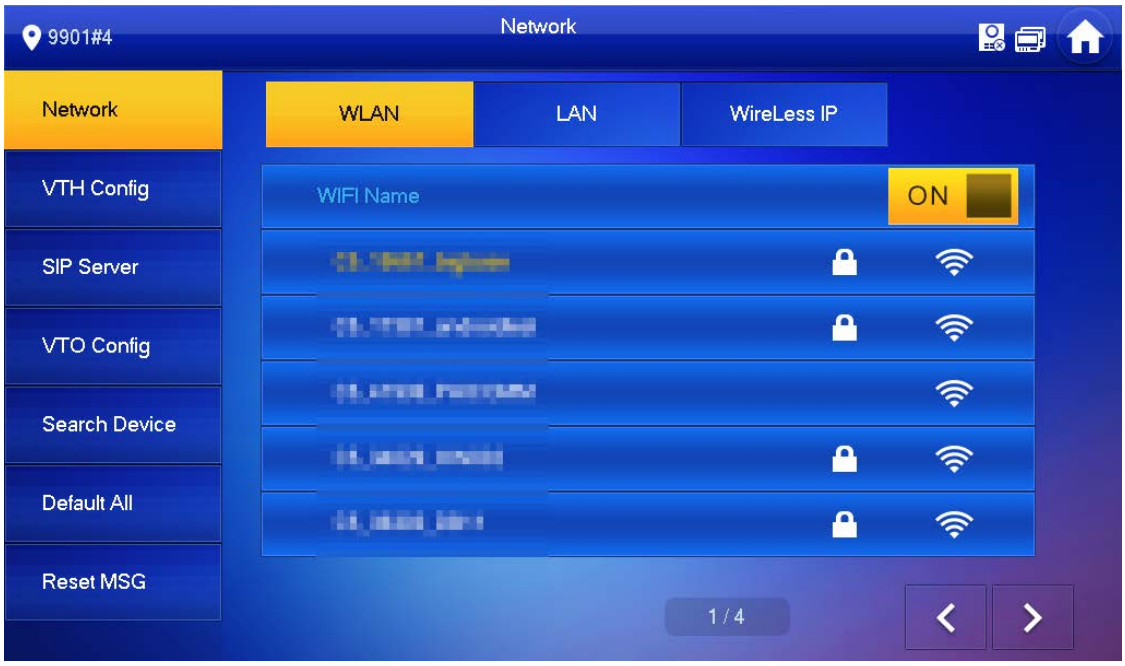
Step 4 Before connecting to a Wi-Fi network, do either of the following first.

- Tap **WireLessIP**, enter local IP, subnet mask and gateway that you plan for the VTH, and then tap **OK**.
- Tap **WireLessIP**, tap OFF to enable the DHCP function to obtain IP information automatically.

  To enable the DHCP function, use a router with a DHCP function.

Step 5 On the **WLAN** screen, tap the Wi-Fi name, and then enter password to connect to the network.

Figure 4-7 WLAN



4.3.1.2 LAN

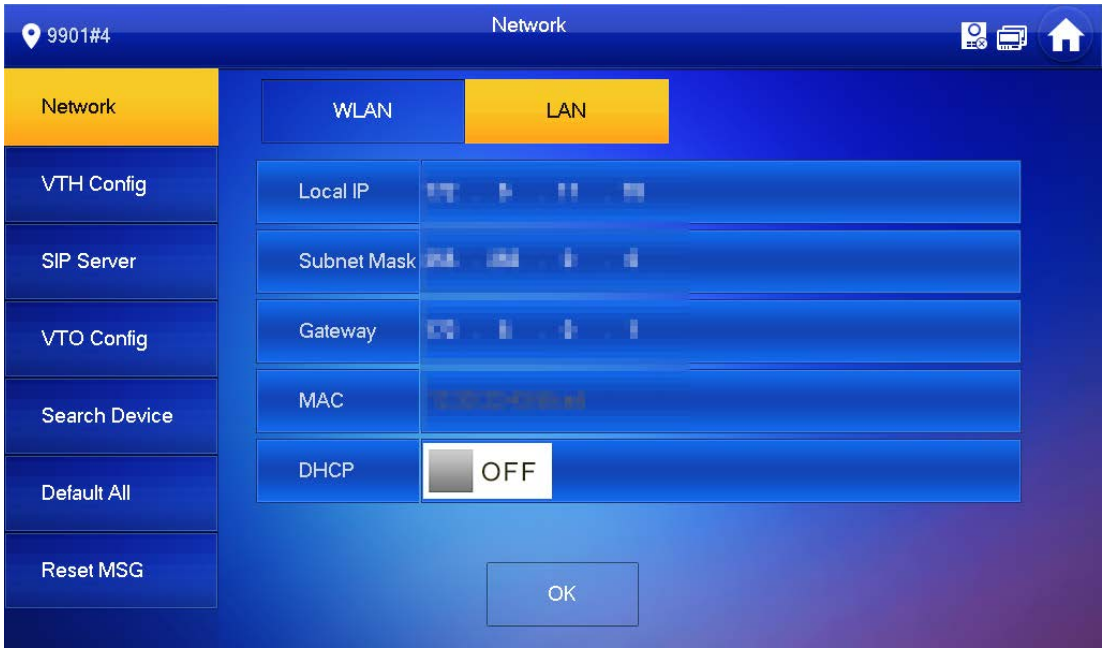
Step 1 Tap and hold **Setting** for about 3 seconds, and enter the password that you set for the VTH.

Step 2 Tap **Network > LAN**.

Step 3 Enter local IP subnet mask and gateway that you plan for the VTH.

You can also tap OFF to enable the DHCP function to obtain IP information automatically.

Figure 4-8 LAN



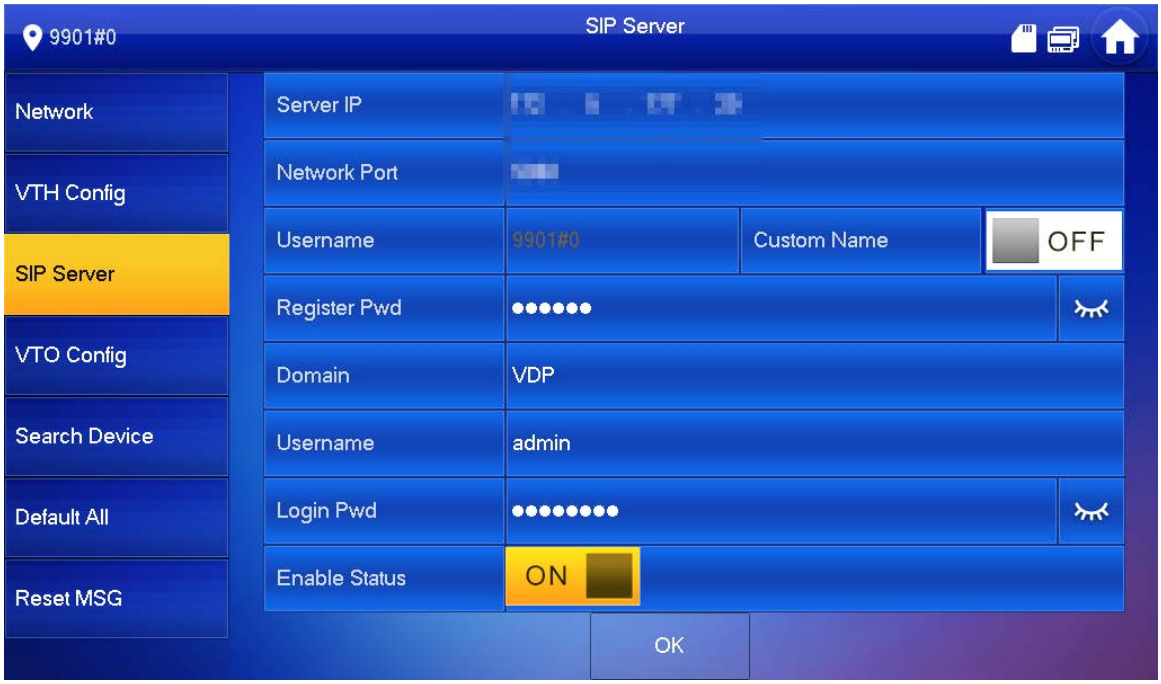
Step 4 Tap **OK**.

4.3.2 Configuring SIP Server

Step 1 Tap and hold **Setting** for about 3 seconds, and enter the password that you set for the VTH.

Step 2 Tap **SIP Server.**

Figure 4-9 SIP server



Step 3 Configure the SIP server parameters.

Step 4 Set **Enable Status** to ON.

Step 5 Tap **OK**.

Table 4-1 SIP server

Parameter	Description
Server IP	• When the platform works as SIP server, server IP is the IP address of the platform. • When VTO works as SIP server, server IP is the IP address of the VTO.
Network Port	• When the platform works as SIP server, the network port is 5080. • When VTO works as SIP server, the network port is 5060.
Username	Leave it as default.
Register Pwd	
Domain	Registration domain of SIP server, which can be null. When VTO works as SIP server, registration domain of SIP server is VDP.
Username	Username and password to log in to SIP server.
Login Pwd	

4.3.3 Configuring VTH

Step 1 Tap and hold **Setting** for about 3 seconds, and enter the password that you set for the VTH.

Step 2 Tap **VTH Config.**

Figure 4-10 VTH configuration

Step 3 Enter room number (such as 9901 or 101#0).

If there is an extension VTH, room number must end with #0. Otherwise, it will fail to connect to VTO.

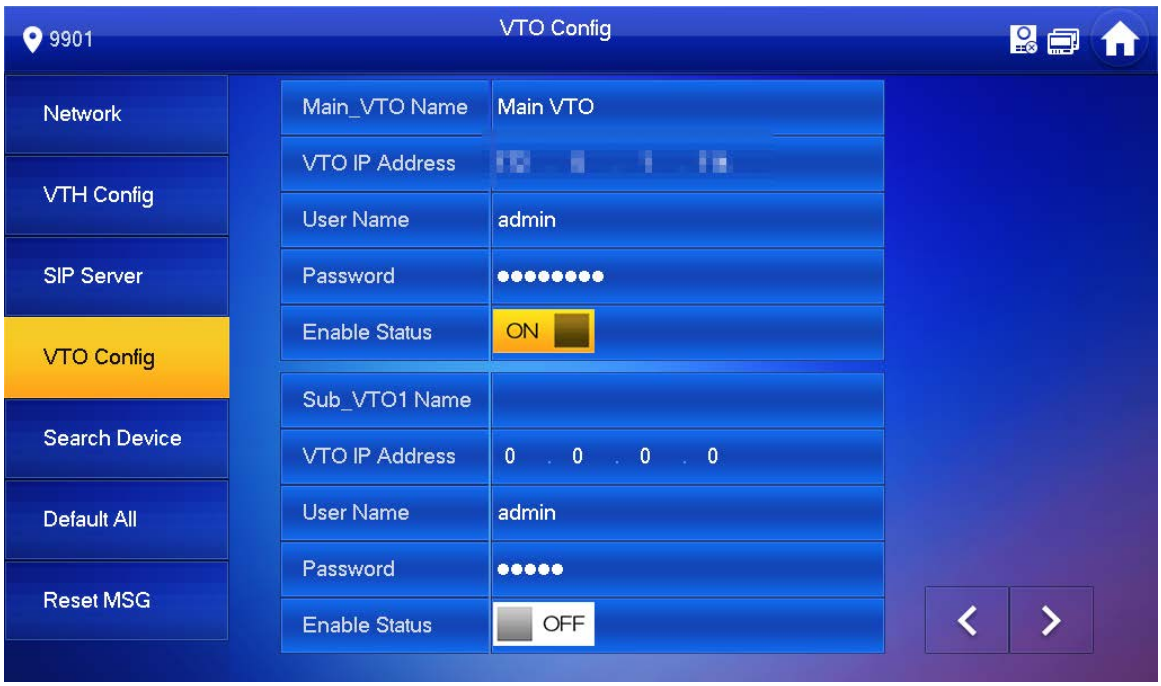
Step 4 Tap **OK**.

4.3.4 Configuring VTO

Step 1 Tap and hold **Setting** for about 3 seconds, and enter the password that you set for the VTH.

Step 2 Tap **VTO Config.**

Figure 4-11 VTO configuration



Step 3 Add VTO.

4.3.4.2 Adding Main VTO

Step 1 Enter main VTO name, VTO IP address, username and password.

Step 2 Set **Enable Status** to 

.

Step 3 Check whether the configuration is successful by checking the status bar at the top right corner.

4.3.4.3 Adding Sub VTO

Step 1 Enter sub VTO name, sub VTO IP address, username, and password.

Step 2 Set **Enable Status** to 

.

Step 3 Check whether the configuration is successful by checking the status bar at the top right corner.

5 Commissioning

After the basic configuration is complete, check whether the intercom function can work.

5.1 VTO Calling VTH

Step 1 Dial a room number on the VTO (for example, 9901).

Step 2 Tap on the VTH to answer the call.

Figure 5-1 Call VTH from VTO

5.2 VTH Monitoring VTO

A VTH can monitor VTO.

Step 1 On the home screen, select **Monitor > Door.**

Step 2 Set the VTO to go to the monitoring page.

Step 3 Tap the icon to view the VTO video.

The following figure means that SD card has been inserted into VTH. If SD card is not inserted, recording and snapshot icons are gray.

Figure 5-2 Door

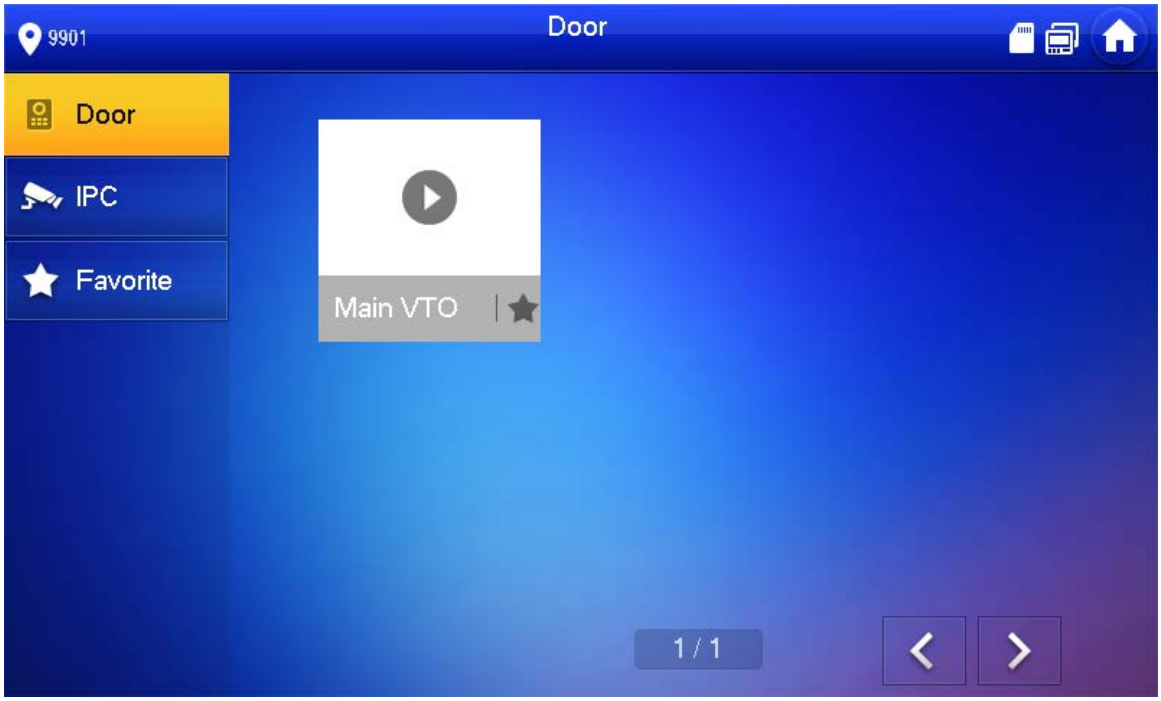


Figure 5-3 Monitoring device

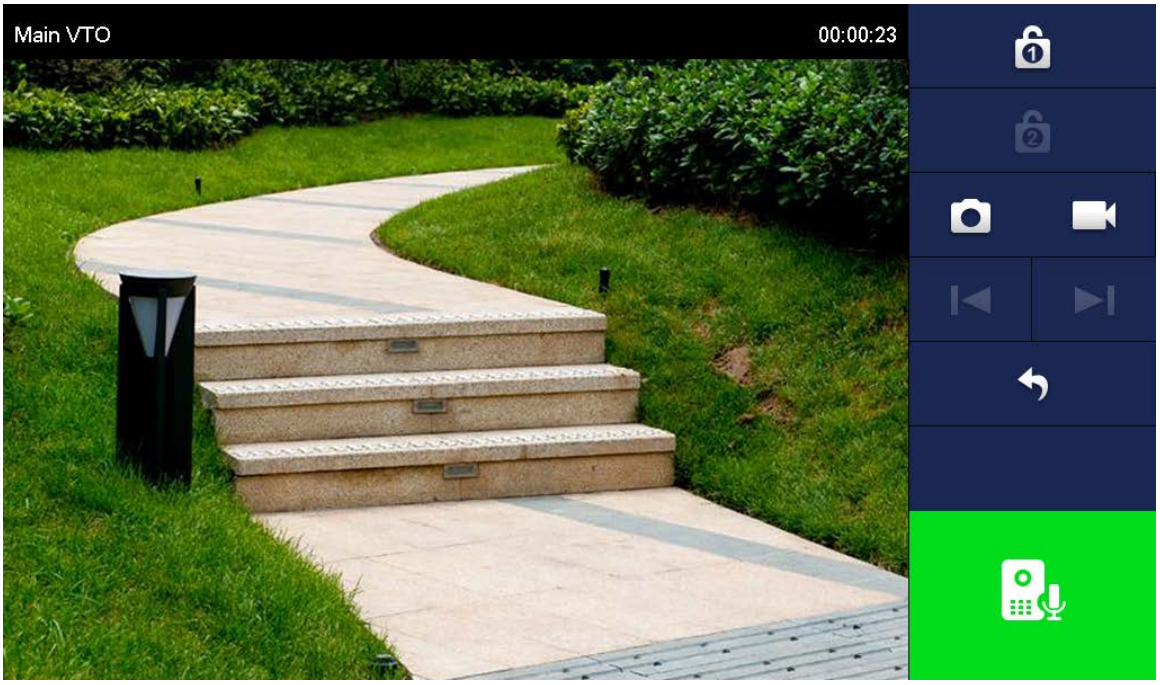

Appendix 1 Cybersecurity Recommendations

Mandatory actions to be taken for basic device network security:

1. **Use Strong Passwords**

   Please refer to the following suggestions to set passwords:

   - The length should not be less than 8 characters;
   - Include at least two types of characters; character types include upper and lower case letters, numbers and symbols;
   - Do not contain the account name or the account name in reverse order;
   - Do not use continuous characters, such as 123, abc, etc.;
   - Do not use overlapped characters, such as 111, aaa, etc.;

2. **Update Firmware and Client Software in Time**

   - According to the standard procedure in Tech-industry, we recommend to keep your device (such as NVR, DVR, IP camera, etc.) firmware up-to-date to ensure the system is equipped with the latest security patches and fixes. When the device is connected to the public network, it is recommended to enable the "auto-check for updates" function to obtain timely information of firmware updates released by the manufacturer.
   - We suggest that you download and use the latest version of client software.

"Nice to have" recommendations to improve your device network security:

1. **Physical Protection**

   We suggest that you perform physical protection to device, especially storage devices. For example, place the device in a special computer room and cabinet, and implement well-done access control permission and key management to prevent unauthorized personnel from carrying out physical contacts such as damaging hardware, unauthorized connection of removable device (such as USB flash disk, serial port), etc.

2. **Change Passwords Regularly**

   We suggest that you change passwords regularly to reduce the risk of being guessed or cracked.

3. **Set and Update Passwords Reset Information Timely**

   The device supports password reset function. Please set up related information for password reset in time, including the end user's mailbox and password protection questions. If the information changes, please modify it in time. When setting password protection questions, it is suggested not to use those that can be easily guessed.

4. **Enable Account Lock**

   The account lock feature is enabled by default, and we recommend you to keep it on to guarantee the account security. If an attacker attempts to log in with the wrong password several times, the corresponding account and the source IP address will be locked.

5. **Change Default HTTP and Other Service Ports**

   We suggest you to change default HTTP and other service ports into any set of numbers between 1024~65535, reducing the risk of outsiders being able to guess which ports you are using.

6. **Enable HTTPS**

   We suggest you to enable HTTPS, so that you visit Web service through a secure communication channel.

7. **MAC Address Binding**

We recommend you to bind the IP and MAC address of the gateway to the device, thus reducing the risk of ARP spoofing.

8. **Assign Accounts and Privileges Reasonably**

   According to business and management requirements, reasonably add users and assign a minimum set of permissions to them.

9. **Disable Unnecessary Services and Choose Secure Modes**

   If not needed, it is recommended to turn off some services such as SNMP, SMTP, UPnP, etc., to reduce risks.

   If necessary, it is highly recommended that you use safe modes, including but not limited to the following services:

   - SNMP: Choose SNMP v3, and set up strong encryption passwords and authentication passwords.
   - SMTP: Choose TLS to access mailbox server.
   - FTP: Choose SFTP, and set up strong passwords.
   - AP hotspot: Choose WPA2-PSK encryption mode, and set up strong passwords.

10. **Audio and Video Encrypted Transmission**

    If your audio and video data contents are very important or sensitive, we recommend that you use encrypted transmission function, to reduce the risk of audio and video data being stolen during transmission.

    Reminder: encrypted transmission will cause some loss in transmission efficiency.

11. **Secure Auditing**

    - Check online users: we suggest that you check online users regularly to see if the device is logged in without authorization.
    - Check device log: By viewing the logs, you can know the IP addresses that were used to log in to your devices and their key operations.

12. **Network Log**

    Due to the limited storage capacity of the device, the stored log is limited. If you need to save the log for a long time, it is recommended that you enable the network log function to ensure that the critical logs are synchronized to the network log server for tracing.

13. **Construct a Safe Network Environment**

    In order to better ensure the safety of device and reduce potential cyber risks, we recommend:

    - Disable the port mapping function of the router to avoid direct access to the intranet devices from external network.
    - The network should be partitioned and isolated according to the actual network needs. If there are no communication requirements between two sub networks, it is suggested to use VLAN, network GAP and other technologies to partition the network, so as to achieve the network isolation effect.
    - Establish the 802.1x access authentication system to reduce the risk of unauthorized access to private networks.
    - Enable IP/MAC address filtering function to limit the range of hosts allowed to access the device.

Digital VTH

User's Manual

V1.0.0

Foreword

General

This document mainly introduces function, structure, networking, installation process, debugging, UI operation and technical parameter of digital VTH products. Read carefully before using the device, and keep the manual safe for future reference.

Safety Instructions

The following categorized signal words with defined meaning might appear in the Manual.

Signal Words	Meaning
 **DANGER**	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.
 **WARNING**	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
 **CAUTION**	Indicates a potential risk which, if not avoided, could result in property damage, data loss, lower performance, or unpredictable result.
 **TIPS**	Provides methods to help you solve a problem or save you time.
 **NOTE**	Provides additional information as the emphasis and supplement to the text.

Privacy Protection Notice

As the device user or data controller, you might collect the personal data of others such as their face, fingerprints, and license plate number. You need to be in compliance with your local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures which include but are not limited: Providing clear and visible identification to inform people of the existence of the surveillance area and provide required contact information.

About the Manual

- The manual is for reference only. Slight differences might be found between the manual and the product.
- We are not liable for losses incurred due to operating the product in ways that are not in compliance with the manual.

- The manual will be updated according to the latest laws and regulations of related jurisdictions. For detailed information, see the paper user's manual, use our CD-ROM, scan the QR code or visit our official website. The manual is for reference only. Slight differences might be found between the electronic version and the paper version.
- All designs and software are subject to change without prior written notice. Product updates might result in some differences appearing between the actual product and the manual. Please contact customer service for the latest program and supplementary documentation.
- There might be errors in the print or deviations in the description of the functions, operations and technical data. If there is any doubt or dispute, we reserve the right of final explanation.
- Upgrade the reader software or try other mainstream reader software if the manual (in PDF format) cannot be opened.
- All trademarks, registered trademarks and company names in the manual are properties of their respective owners.
- Please visit our website, contact the supplier or customer service if any problems occur while using the device.
- If there is any uncertainty or controversy, we reserve the right of final explanation.

Important Safeguards and Warnings

This section introduces content covering the proper handling of the device, hazard prevention, and prevention of property damage. Read carefully before using the device, comply with the guidelines when using it.

Operation Requirements

- Check whether the power supply is correct before use.
- Do not unplug the power cord on the side of the device while the adapter is powered on.
- Operate the device within the rated range of power input and output.
- Transport, use and store the device under allowed humidity and temperature conditions.
- Do not drop or splash liquid onto the device, and make sure that there is no object filled with liquid on the device to prevent liquid from flowing into it.
- Do not disassemble the device without professional instruction.

Installation Requirements

- Do not connect the power adapter to the device while the adapter is powered on.
- Strictly comply with the local electric safety code and standards. Make sure the ambient voltage is stable and meets the power supply requirements of the device.
- Do not connect the device to two or more kinds of power supplies, to avoid damage to the device.
- Improper use of the battery might result in a fire or explosion.

- Personnel working at heights must take all necessary measures to ensure personal safety including wearing a helmet and safety belts.
- Do not place the device in a place exposed to sunlight or near heat sources.
- Keep the device away from dampness, dust, and soot.
- Install the device on a stable surface to prevent it from falling.
- Install the device in a well-ventilated place, and do not block its ventilation.
- Use an adapter or cabinet power supply provided by the manufacturer.
- Use the power cords that are recommended for the region and conform to the rated power specifications.
- The power supply must conform to the requirements of ES1 in IEC 62368-1 standard and be no higher than PS2. Please note that the power supply requirements are subject to the device label.
- The device is a class I electrical appliance. Make sure that the power supply of the device is connected to a power socket with protective earthing.

1 Product Overview

1.1 Introduction

A digital VTH is device that can perform monitoring, voice/video call, and door unlock.

1.2 Function

Wi-Fi Networking

Connect to Wi-Fi networks.

Video/Voice Call

Make video or voice call to other VTOs and VTHs.

Monitoring

Monitor fence station, VTO and IPC devices (only supported by certain models).

SOS

Make emergency call to the Call Center.

Auto Snapshot

Take snapshots when calling or monitoring, and store them in the SD card.

DND (Do Not Disturb)

Mute all message and call notifications.

Remote Unlock

Unlock doors remotely.

Arm and Disarm

Arm and disarm 6 alarm devices.

Playback

Play back videos and pictures in the SD card.

Alarm

Alarms will trigger linkage and be sent to the Call Center.

Record

View call and alarm records.

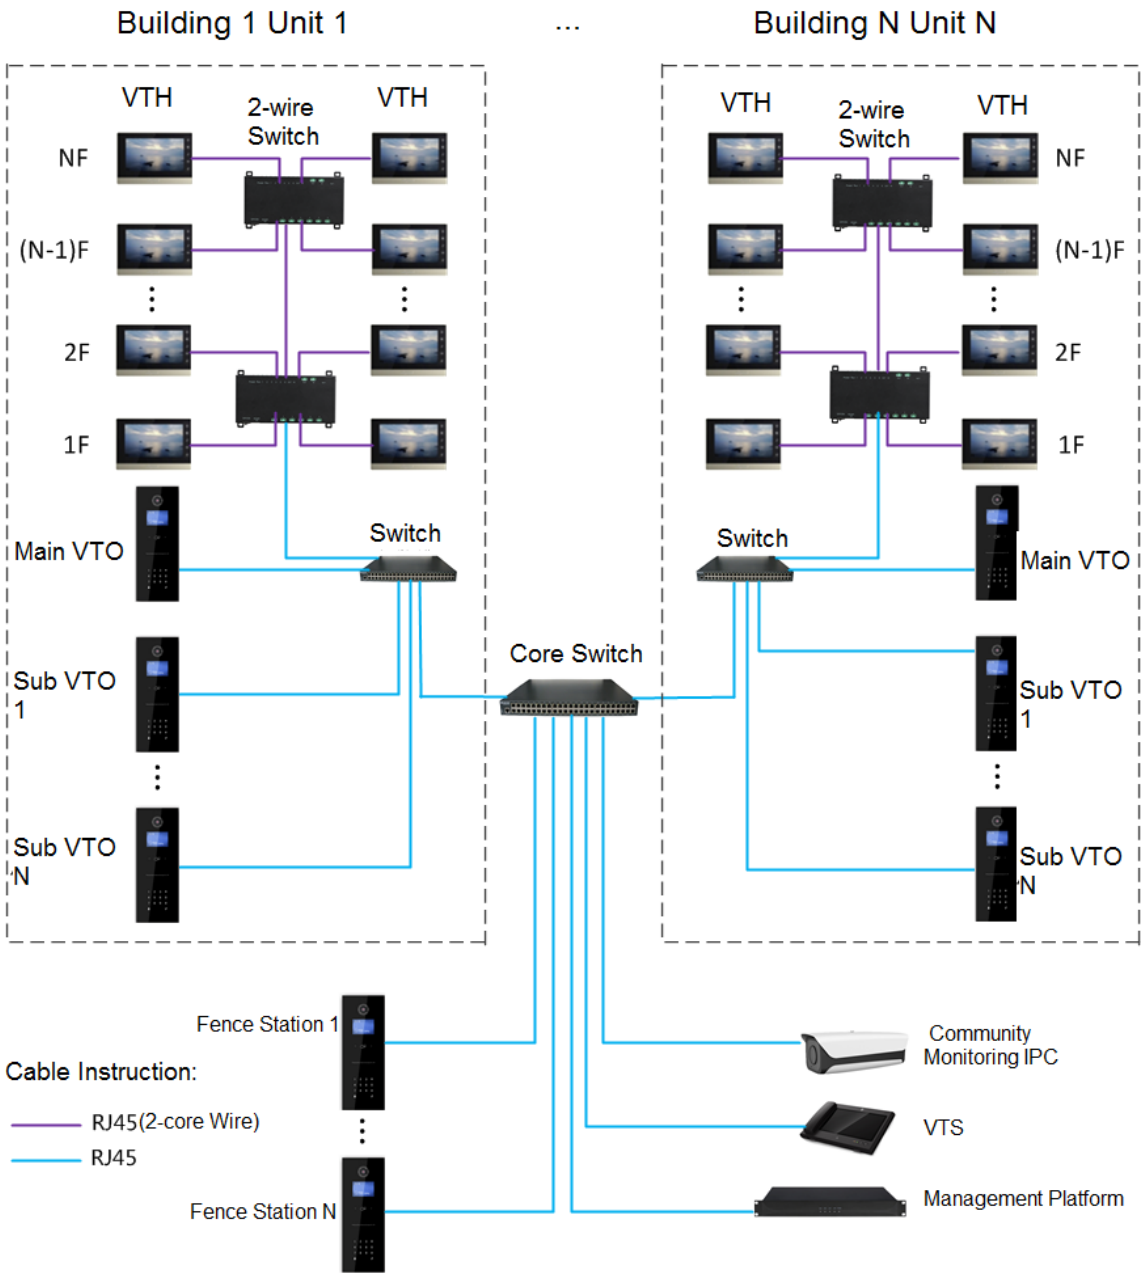
Message

View messages, including videos, pictures and announcements.

2 Network Diagram

2.1 2-wire System

Figure 2-1 Network diagram of 2-wire system

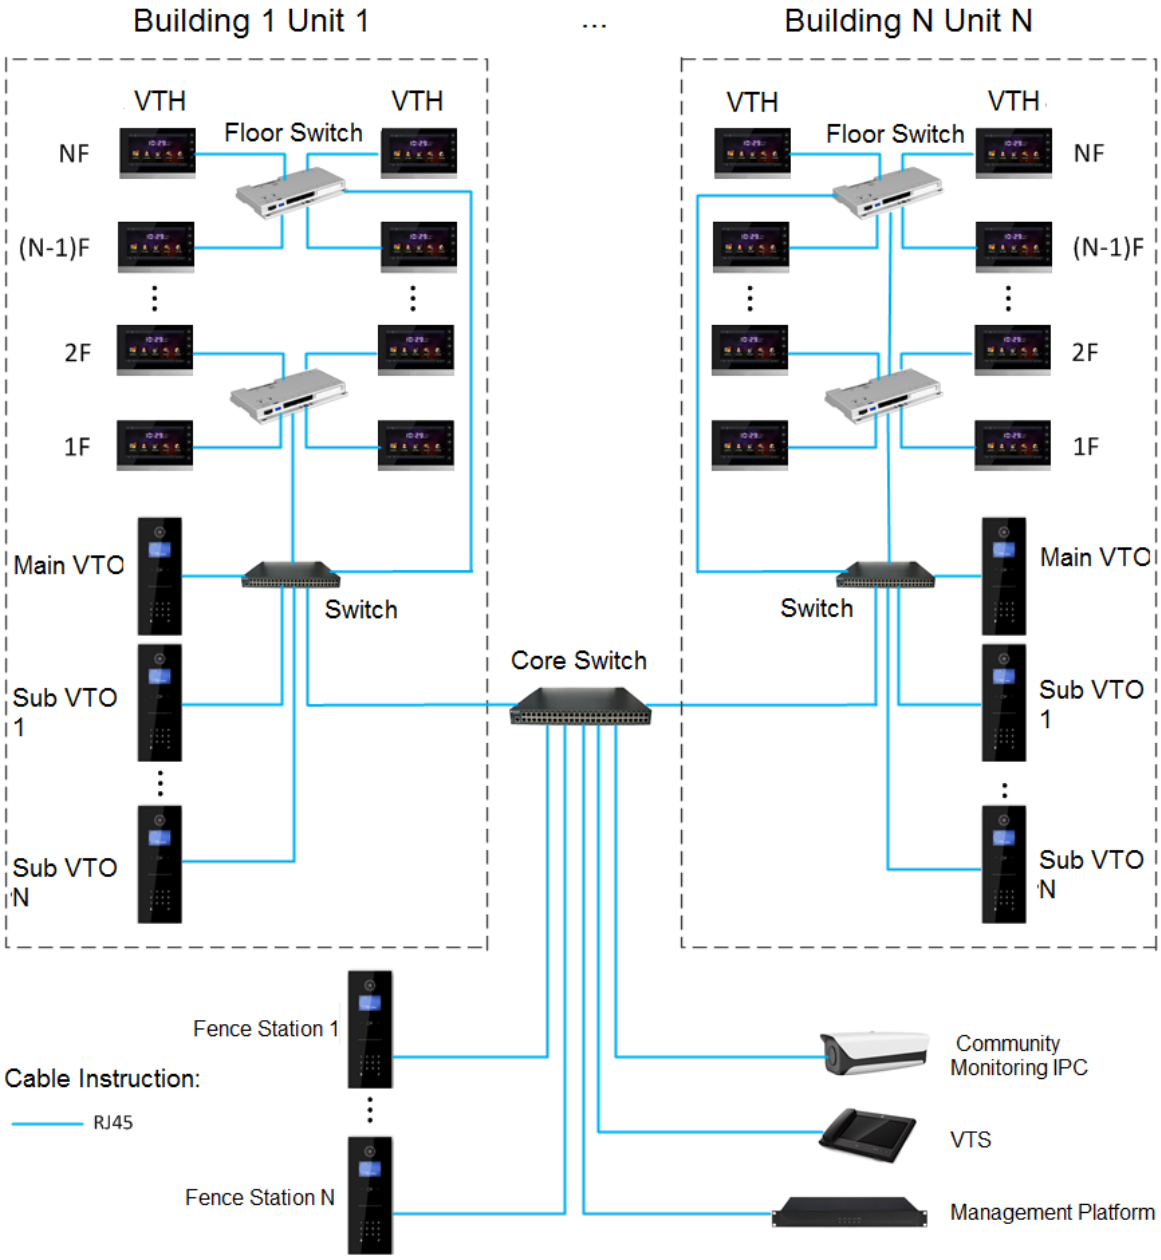


2.2 Digital System

There are two types of digital system network:

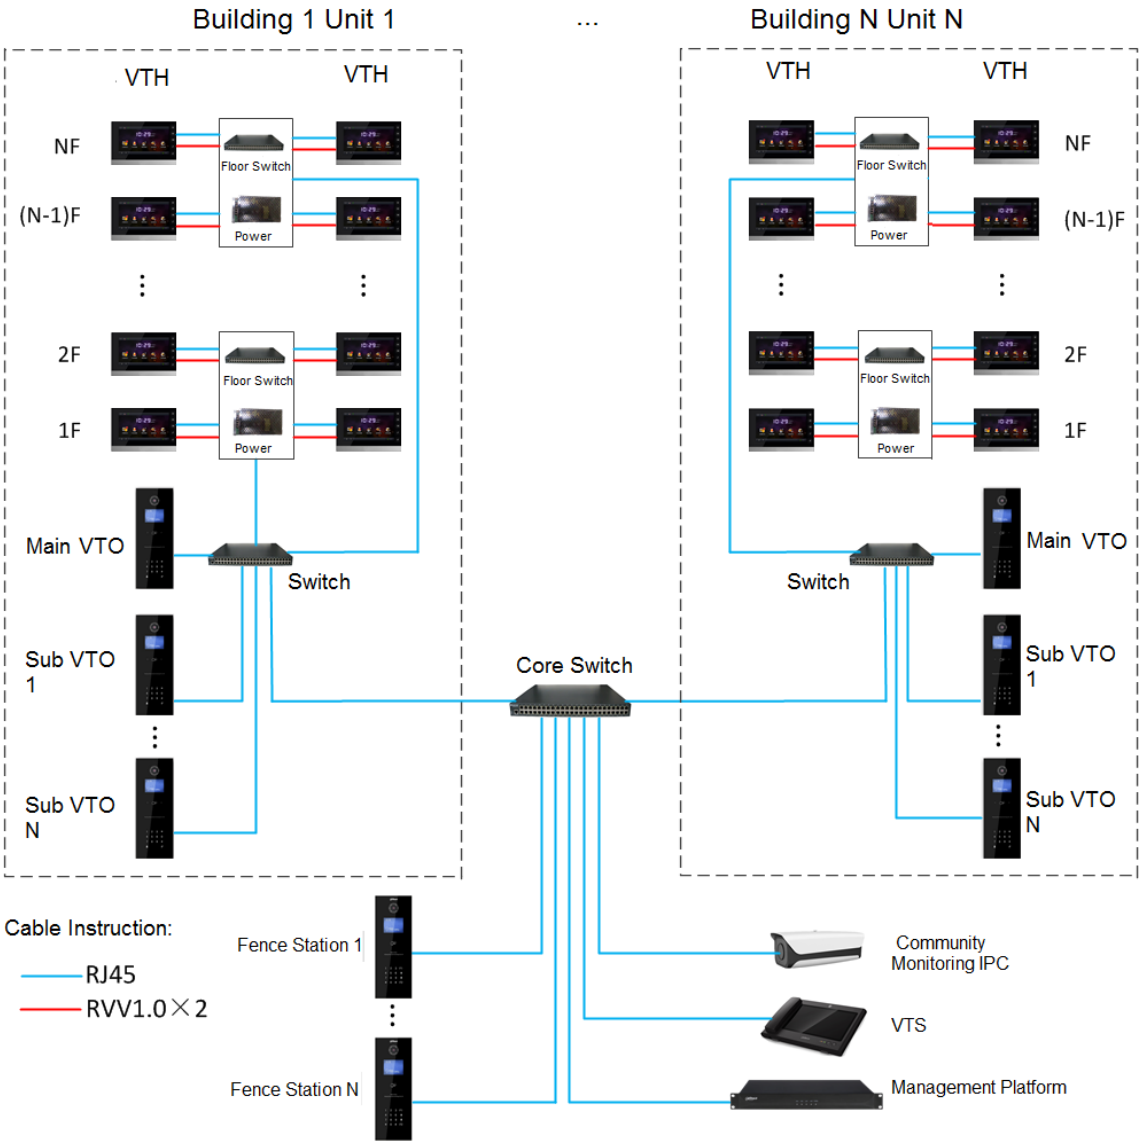
- The VTH powered through PoE from the floor switch.

Figure 2-2 Network diagram of digital system (1)



- The VTH is independently powered through a power supply.

Figure 2-3 Network diagram of digital system (2)



3 Preparation and Commissioning

Carry out commissioning to ensure that the device can realize basic network access, call and monitoring functions.

3.1 Preparation

Before commissioning:

- Power on the device only after there is no short or open circuit.
- Plan IP addresses and numbers (works as phone numbers) for every VTO and VTH.
- Confirm the position of the SIP server.

- The device must be used with a VTO that is the SIP server. This section takes a unit VTO as an example. See corresponding user's manuals for other VTO types.
- Log in to the web page of every VTO and VTH and configure all relevant information.

3.1.1 VTO Settings

3.1.1.1 Initialization

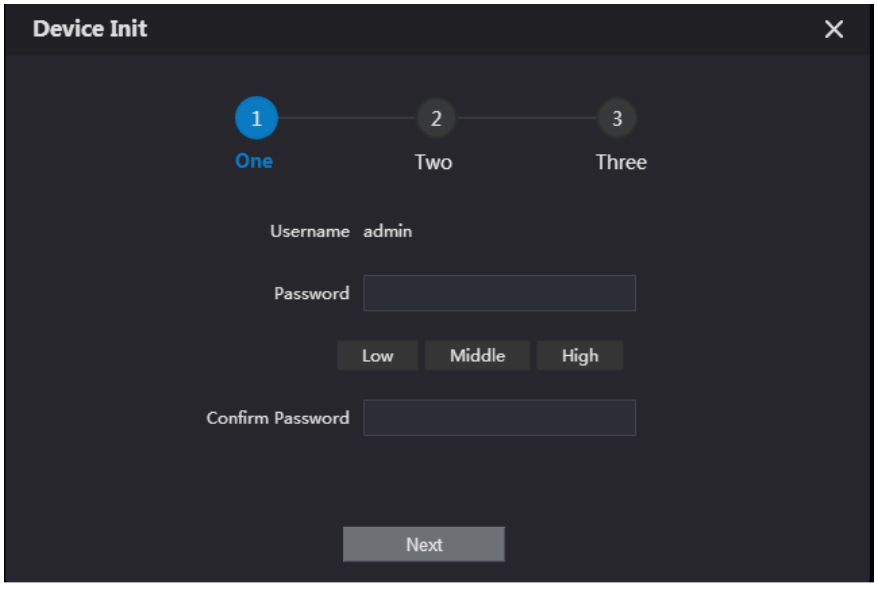
For the first-time use, you must initialize the device.

Make sure that the IP addresses of the PC and VTO are in the same network segment. The default IP address of VTO is 192.168.1.108.

Step 1 Power on the VTO.

Step 2 Go to the default IP address of VTO in the browser.

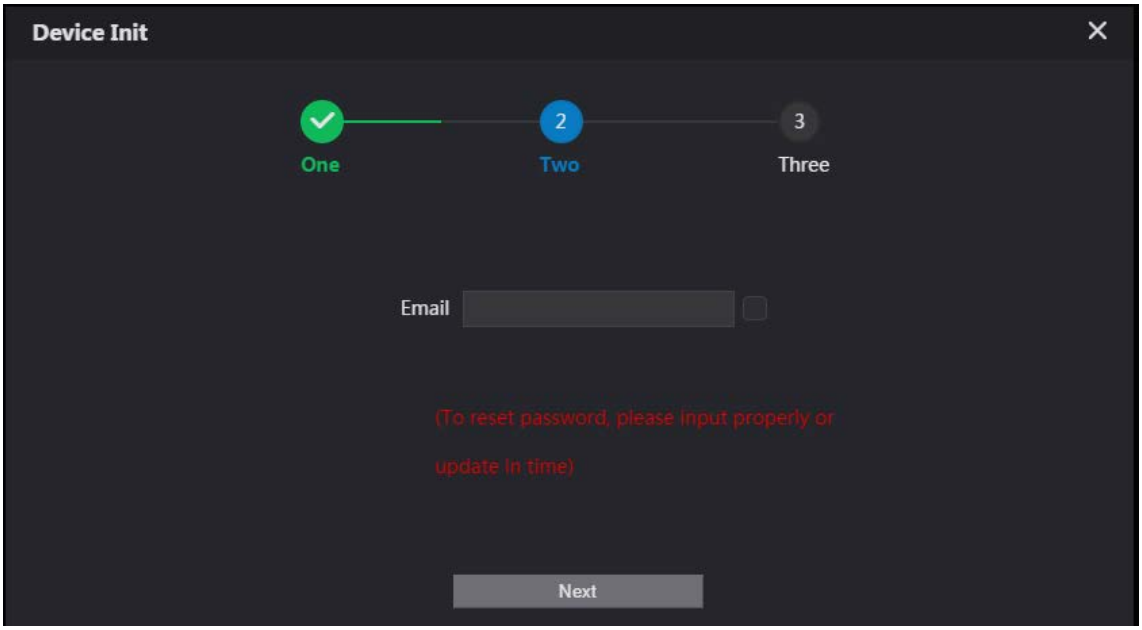
Figure 3-1 Device initialization



Step 3 Enter the password and confirm it, and then click **Next**.

This password is used to log in to the web page. It must be at least 8 characters, and include a combination of at least two types among number, letter and symbol.

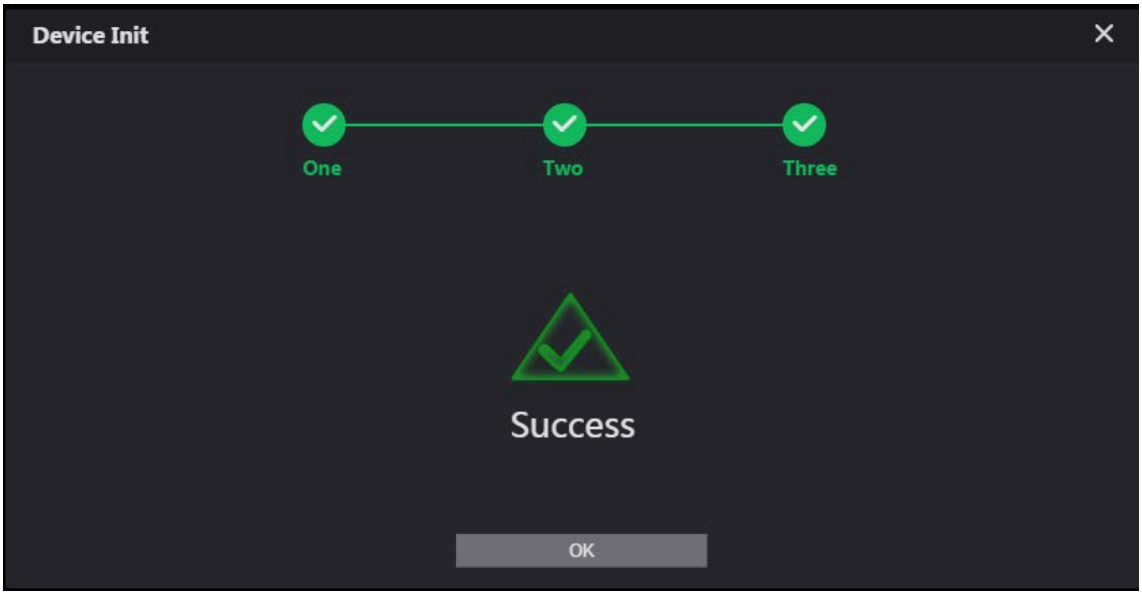
Figure 3-2 Set an email address



Step 4 Select **Email** and enter your email address for resetting password.

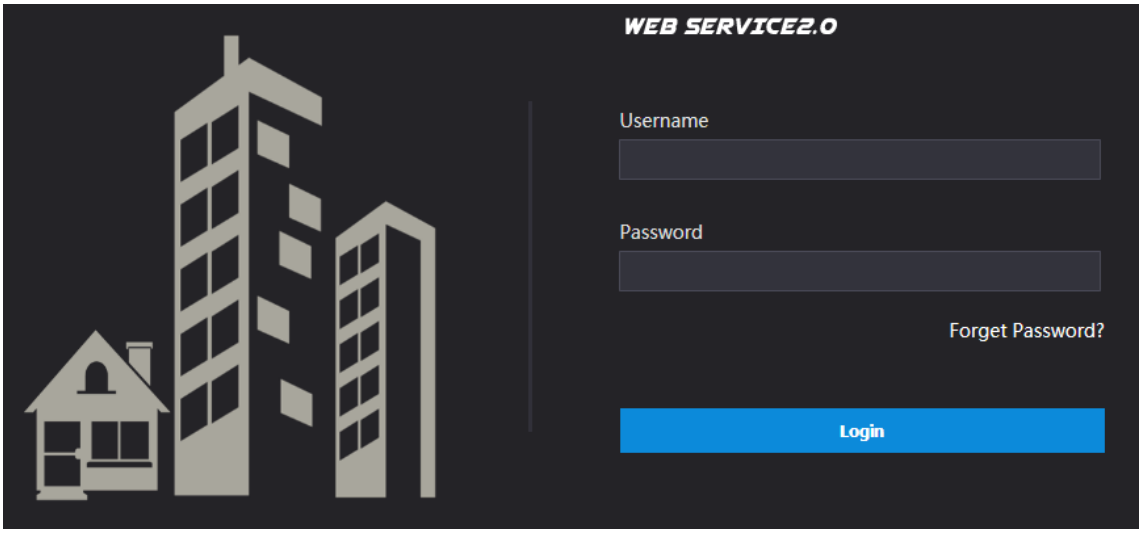
Step 5 Click **Next**.

Figure 3-3 Initialization successful



Step 6 Click **OK** and the it goes to the login web page.

Figure 3-4 Log in to web page



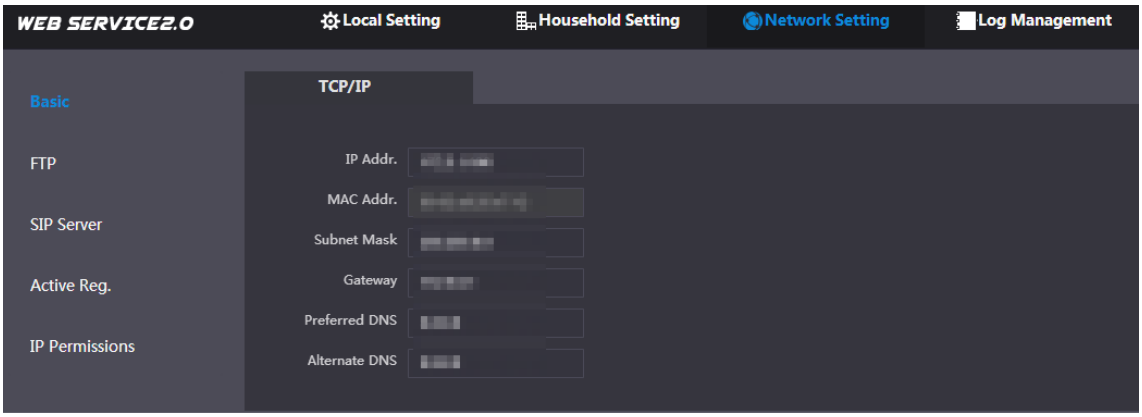
Step 7 Enter username (admin by default) and password, and then click **Login**.

3.1.1.2 Network Parameters

Change the IP address of the VTO to the one that you planned.

Step 1 Select **Network Setting > Basic**.

Figure 3-5 TCP/IP



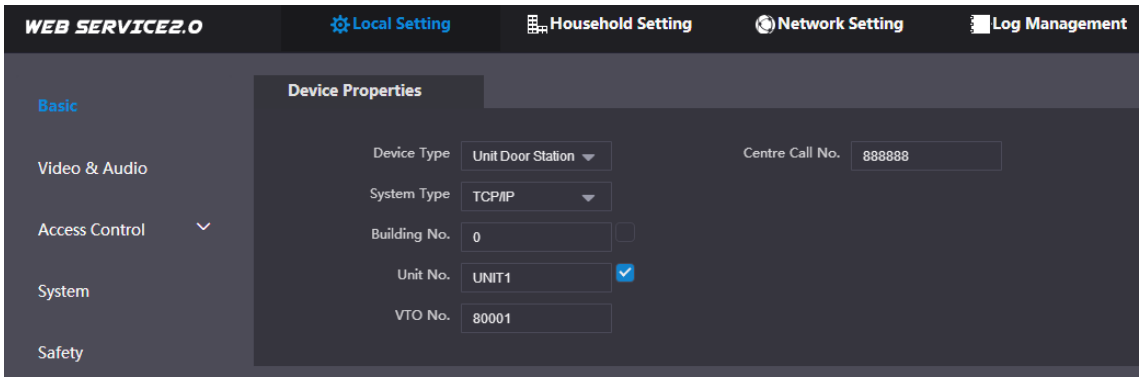
Step 2 Enter the parameters, and then click **OK**.

The VTO automatically restarts. Make sure that the PC is in the same network segment as the VTO to log in again.

3.1.1.3 System Type

Step 1 Select **Local Setting > Basic**.

Figure 3-6 Device properties



Step 2 Select **System Type** to **TCP/IP**.

Step 3 Click **OK**.

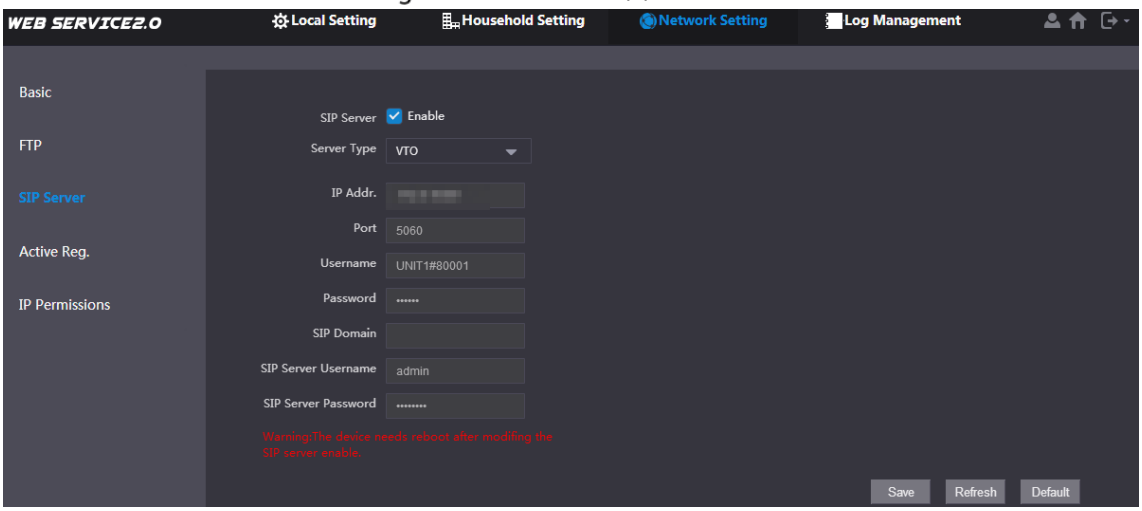
Wait for the device to automatically restart or restart it manually, and then the settings will take effect.

3.1.1.4 Server Type

You can select the type of the server that manages all VTO devices.

Step 1 Select **Network Setting > SIP Server**.

Figure 3-7 SIP server (1)



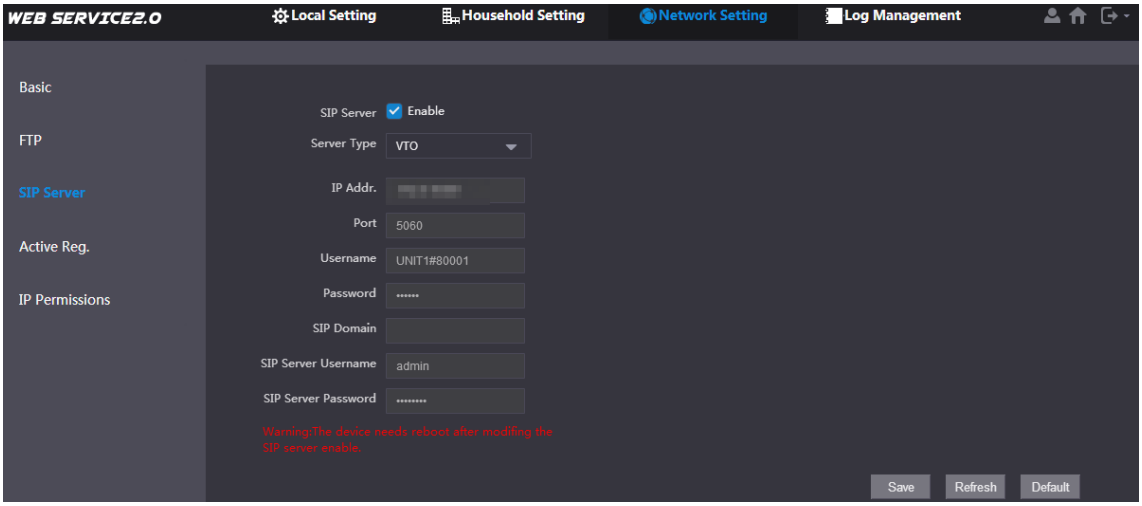
Step 2 Select a server type.

- When this VTO or another VTO works as the SIP server, select **Server Type** to **VTO**. It applies to a scenario where there is only one building.
- When a platform (such as Express/DSS) works as the SIP server, select **Server Type** to **Express/DSS**. It applies to a scenario where there are multiple buildings.

3.1.1.5 SIP Server

Step 1 Select **Network Setting > SIP Server**.

Figure 3-8 SIP server (2)



Step 2 Configure SIP server.

- The current VTO works as the SIP server.
  Enable **SIP Server**, and then click **OK**. The VTO automatically restarts, and it goes to the login web page.

If the current VTO is not the SIP server, do not enable **SIP Server**; otherwise the connection will fail.

- Another VTO works as the SIP server.
  Disable **SIP Server**, configure the parameters, and then click **OK**. The VTO automatically restarts, and it goes to the login web page.

Table 3-1 SIP server parameters when a VTO works as the SIP server

Parameter	Description
IP Address	IP address of the VTO that works as the SIP server.
Port	5060 by default.
Username	Keep it default.
Password	
SIP Domain	Keep it default.
Login Username	SIP server login username and password.
Login Pwd	

- The platform (Express/DSS) works as the SIP server.
- Select **Server Type** as **Express/DSS,** configure the parameters, and then click **OK**. The VTO automatically restarts, and it goes to the login web page.

Table 3-2 SIP server parameters when the platform works as the SIP server

Parameter	Description
IP Address	IP address of the platform.
Port	5080 by default.
Username	Keep it default.
Password	
SIP Domain	Keep it default or null.
SIP Server Username	SIP server login username and password.
SIP Server Password	

- VTO settings have been completed if the platform or another VTO works as the SIP server.
- If the current VTO works as the SIP server, **Device Manager** will appear on the left. See "3.1.1.6 Adding VTO " and "3.1.1.7 Adding VTH " to add VTOs and VTHs.

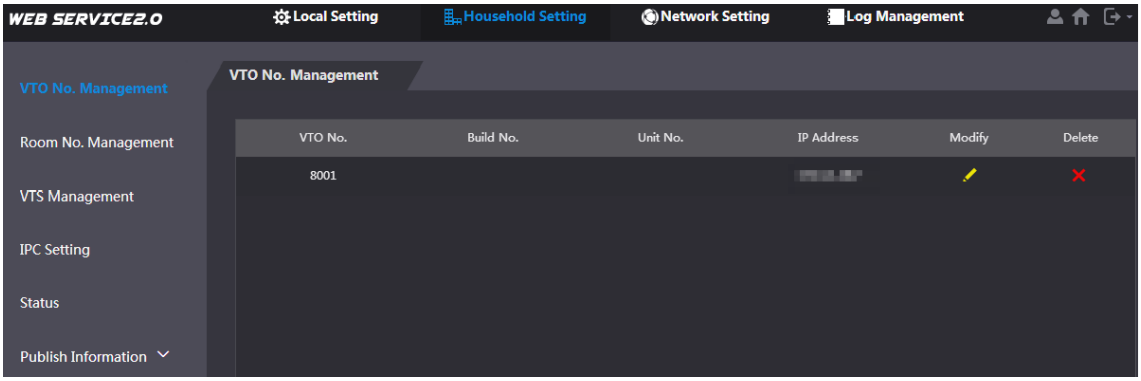
3.1.1.6 Adding VTO

Add VTO only when the current VTO works as the SIP server.

Step 1 Log in to the web page of the VTO.

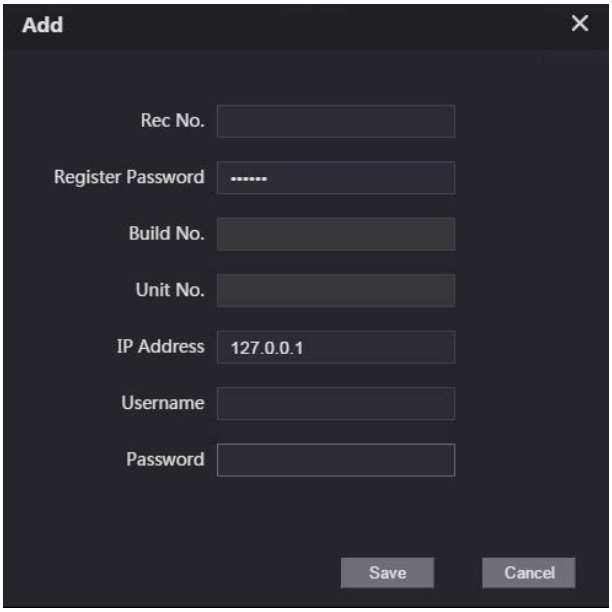
Step 2 Select **Household Setting > VTO No. Management**.

Figure 3-9 VTO number management



Step 3 Click **Add**.

Figure 3-10 Add a VTO



Step 4 Configure the parameters.

Table 3-3 Parameters of adding a VTO

Parameter	Description
Rec No.	VTO number.
Register Password	Keep it default.
IP Address	IP address of VTO.
Username	Web page login username and password of this VTO.
Password	

Step 5 Click **OK**.

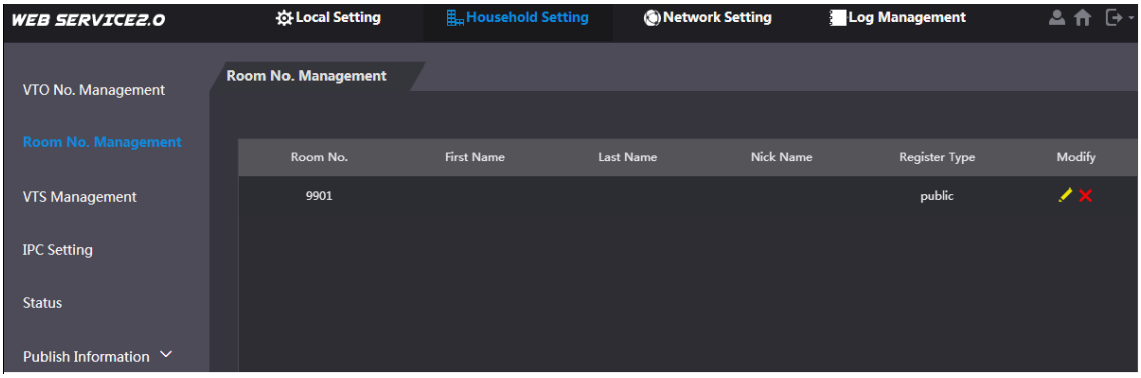
Do Step 3–Step 5 to add other VTOs.

3.1.1.7 Adding VTH

- Add VTHs only when the current VTO works as the SIP server.
- Add both main and extension VTHs.

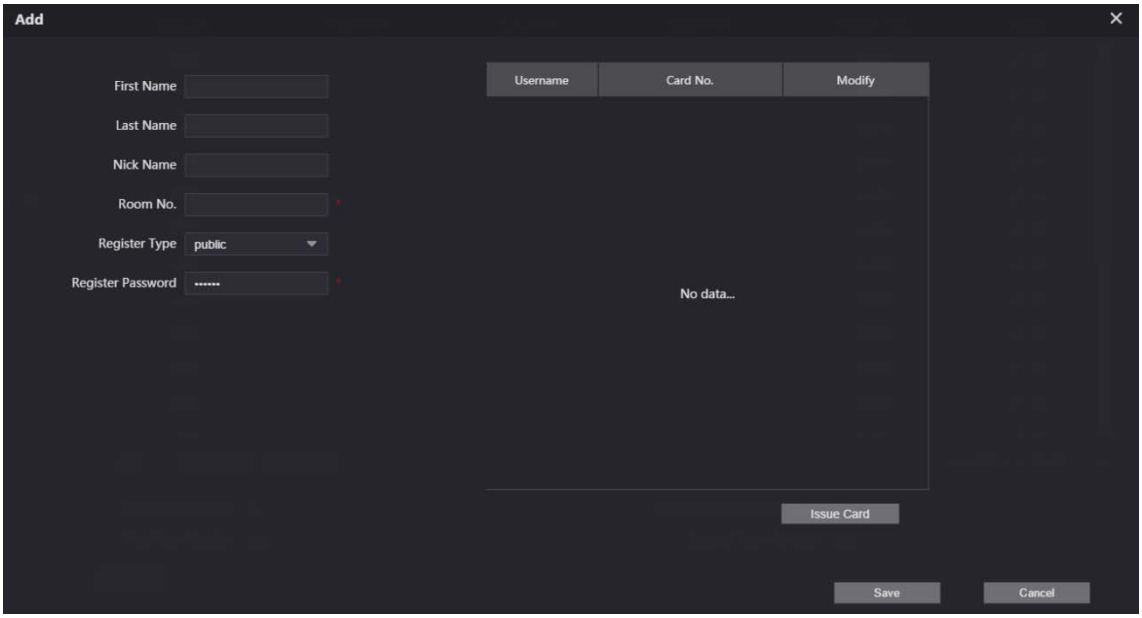
Step 1 Select **Household Setting > Room No. Management**.

Figure 3-11 Room number management



Step 2 Click **Add**.

Figure 3-12 Add a VTH



Step 3 Configure the parameters.

Table 3-4 Parameters of adding a VTH

Parameter	Description
First Name	Information to distinguish each device.
Last Name	
Nick Name	
Room No.	 • VTH number consists of 1–6 numbers, which may include number and #. It must be consistent with room number configured at the VTH. • When there are main VTH and extensions, to use group call function, the main VTH number must end with #0, and the extension VTH number must end with #1, #2 and #3. For example, if the main VTH is 101#0, extension VTHs must be 101#1, 101#2…
Register Password	Keep it default.
Register Type	

Step 4 Click **OK**.

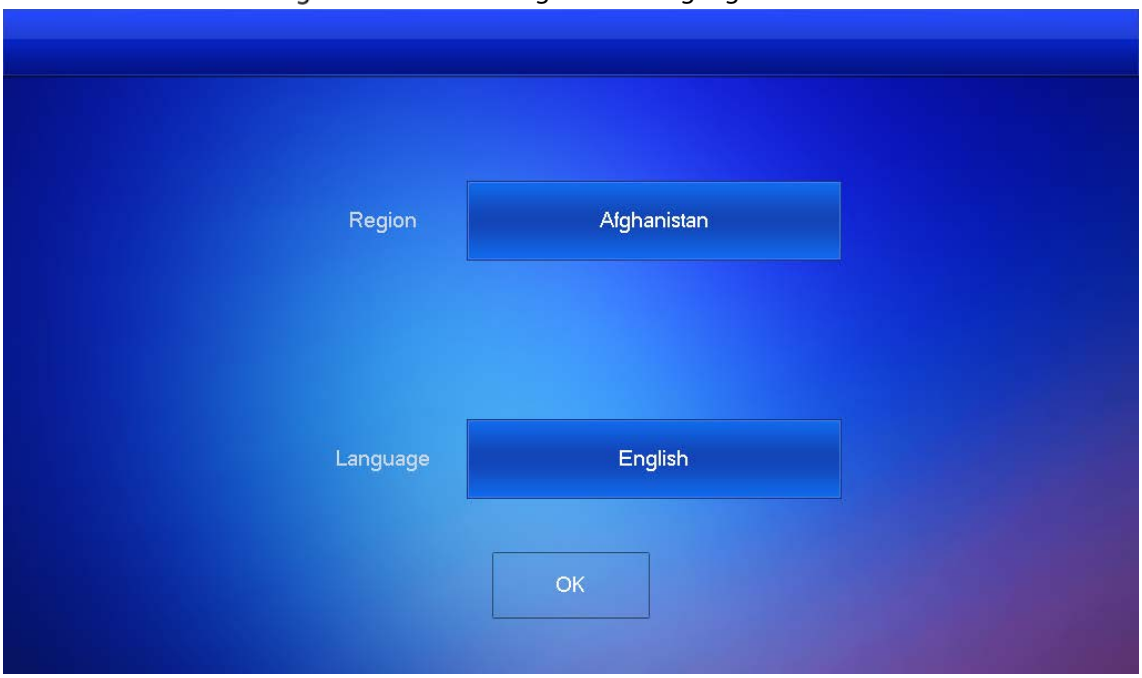
Do Step 2–Step 4 to add other VTHs.

3.1.2 VTH Settings

3.1.2.1 Initialization

Step 1 Select a region and language.

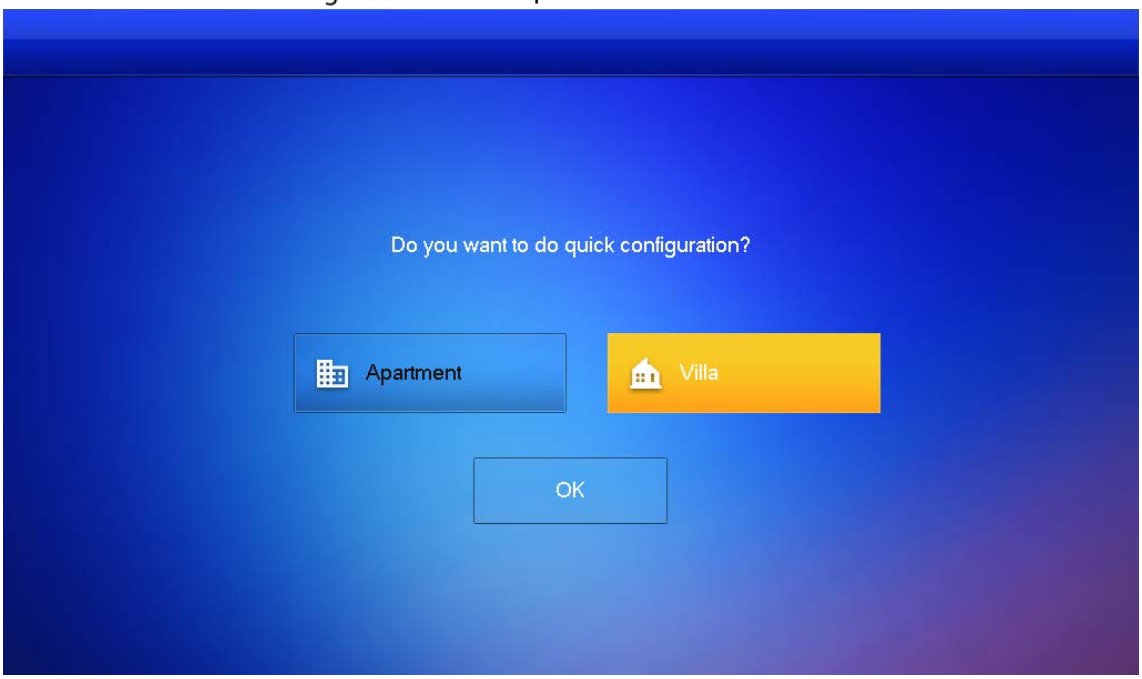
Figure 3-13 Select a region and language



Step 2 Select **Apartment** or **Villa**, and then tap **OK**.

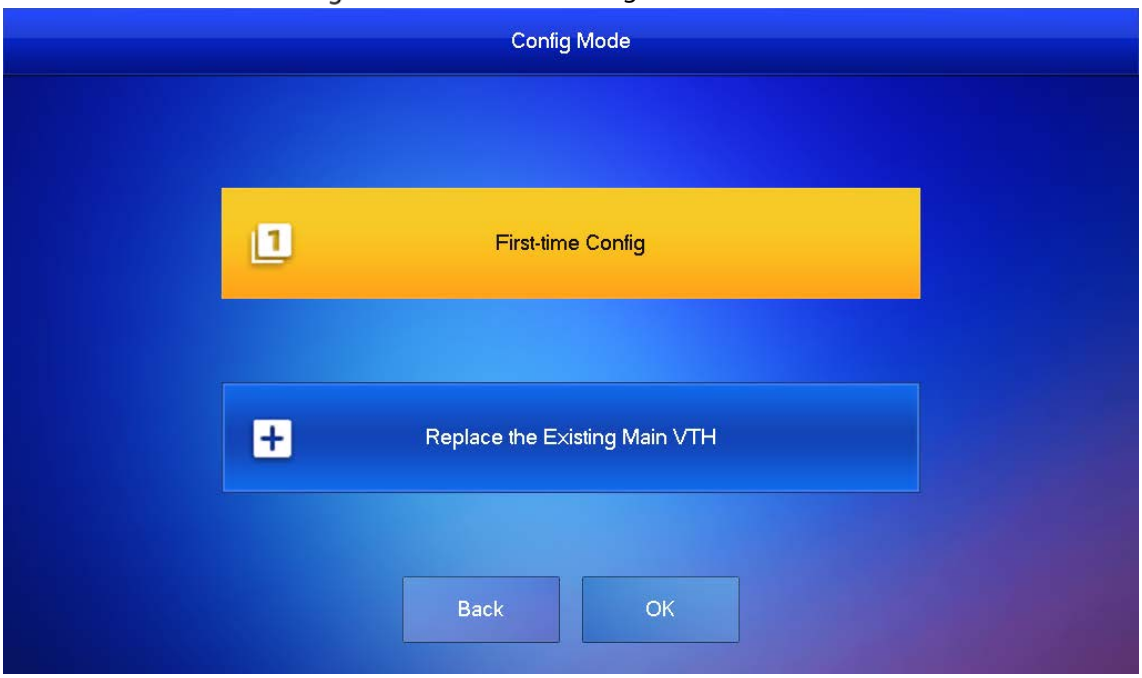
This section takes **Villa** as an example.

Figure 3-14 Select apartment or villa



Step 3 Select **First-time Config** and tap **OK**.

Figure 3-15 First-time configuration



Step 4 **DHCP** is selected by default, or select **Static IP** and configure the parameters as needed.

Figure 3-16 DHCP

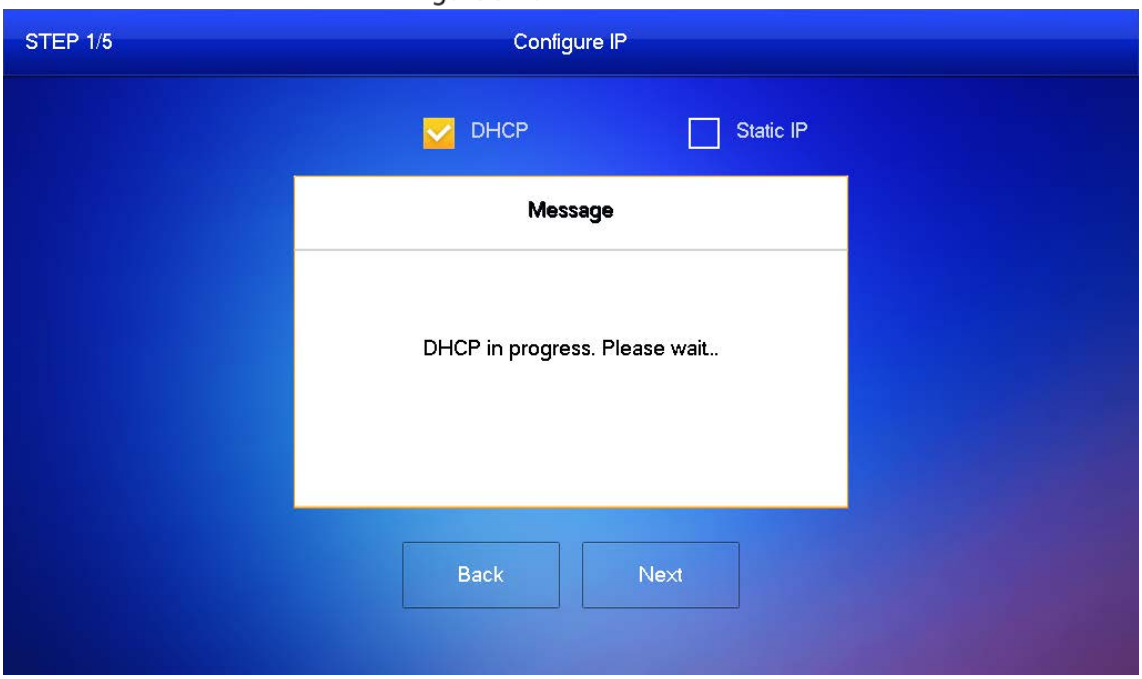


Figure 3-17 Static IP

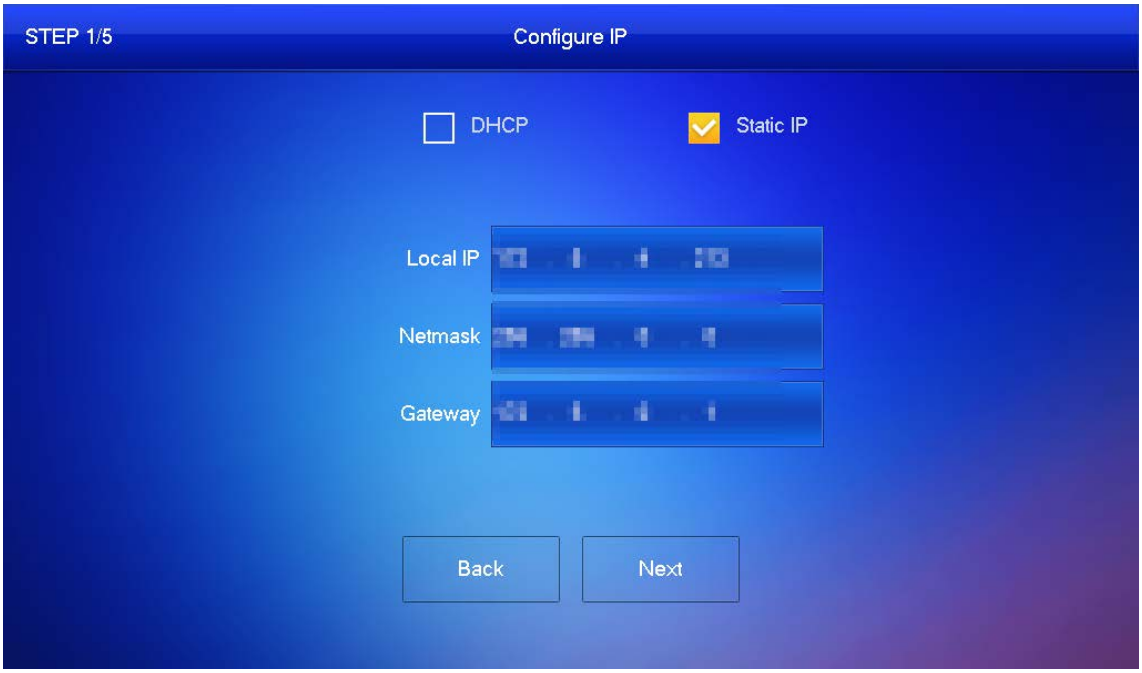
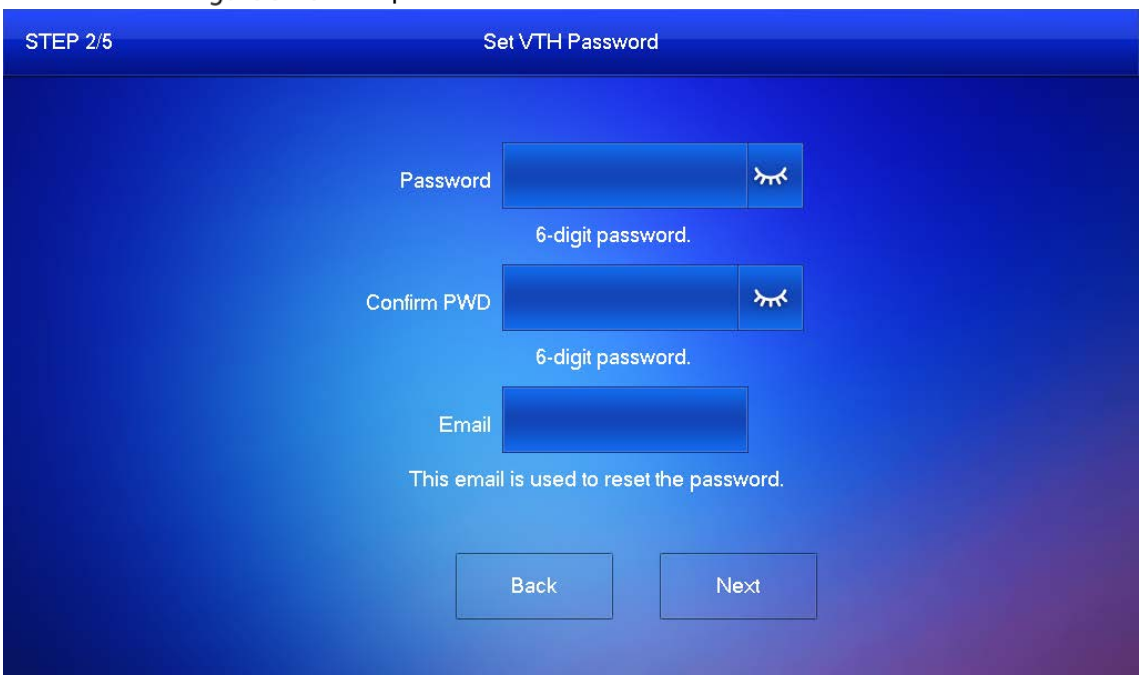


Step 5 Set a password and an email address for the VTH, and then tap **Next**.

- The password is used to enter project setting screen.
- If you select **Apartment** in Step 2, initialization is completed with this step.

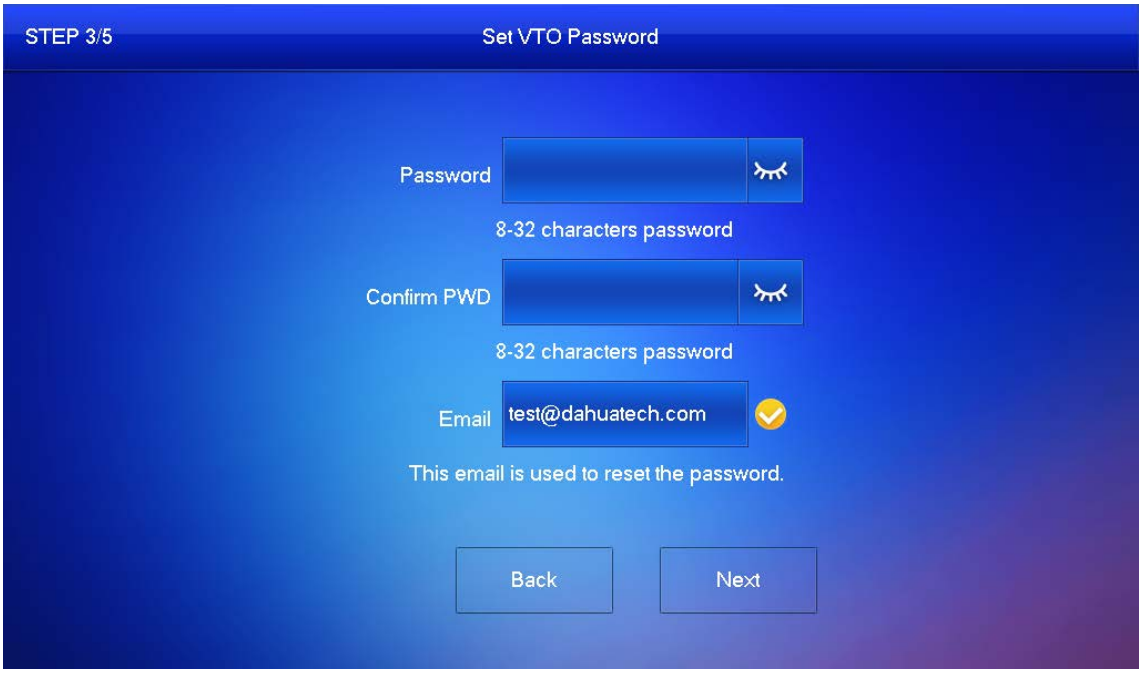
Figure 3-18 Set a password an email address for the VTH



Step 6 Set a password and an email address for the VTO.

The password is used to enter project setting.

Figure 3-19 Set a password an Email address for the VTO



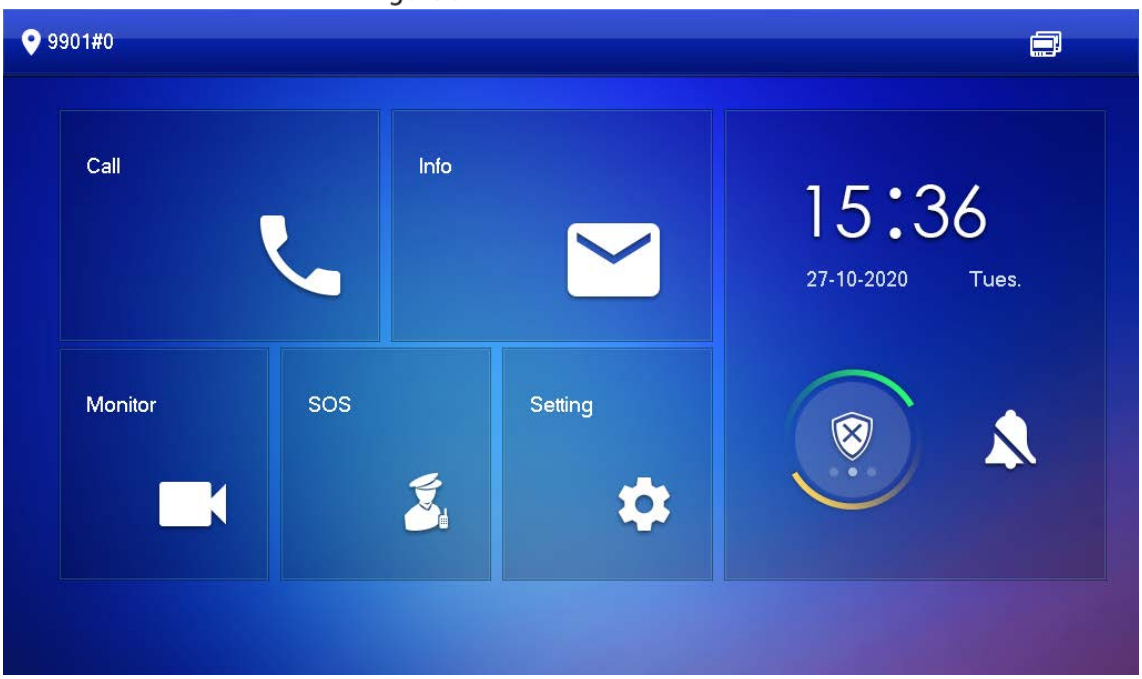
Step 7 Click **Initialize** to initialize a single device or **Batch Initialization** to initialize all available devices, and then click **Next**.

Figure 3-20 Initialize devices

Step 8 Click **One-key Config** to go to the home screen of the VTH.

Figure 3-21 Network configuration

Figure 3-22 Home screen



3.1.2.2 Network Parameters

IP addresses of all VTHs and VTOs must be in the same network segment. Otherwise, the VTH will fail to obtain VTO information.

Step 1 On the home screen, tap **Setting** for about 3 seconds.

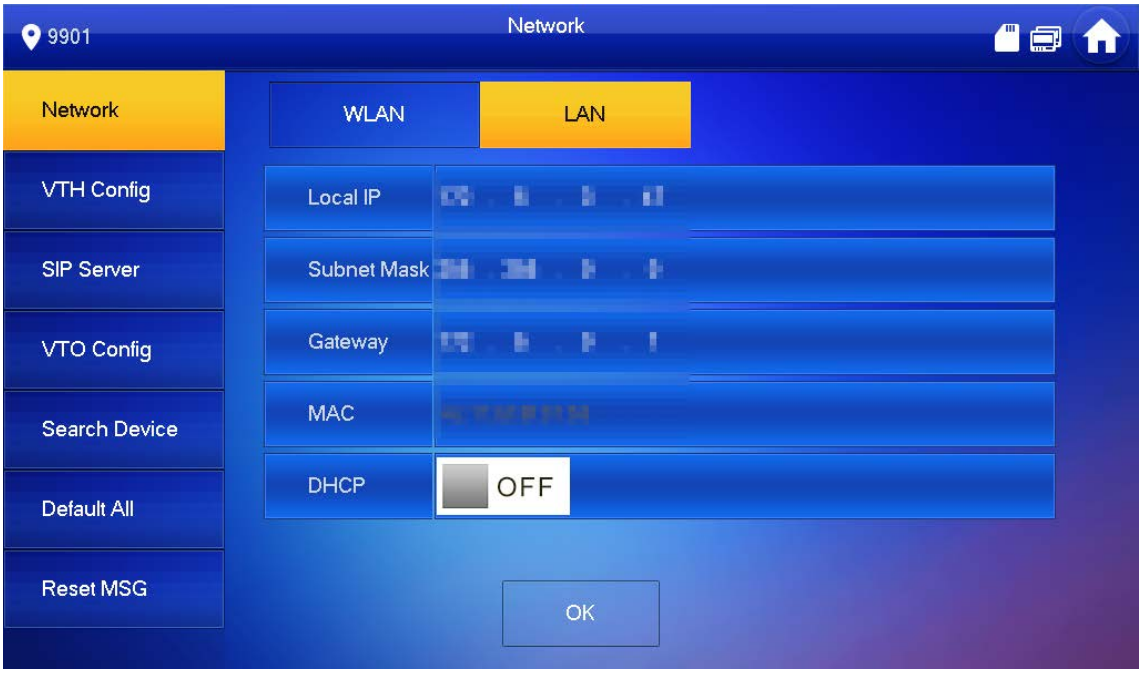
Step 2 Enter the password and tap **OK**.

Step 3 Tap **Network**.

Step 4 Configure the parameters.

- LAN: Enter the information, and then tap **OK**; or turn on **DHCP** to obtain the information automatically.

Figure 3-23 LAN

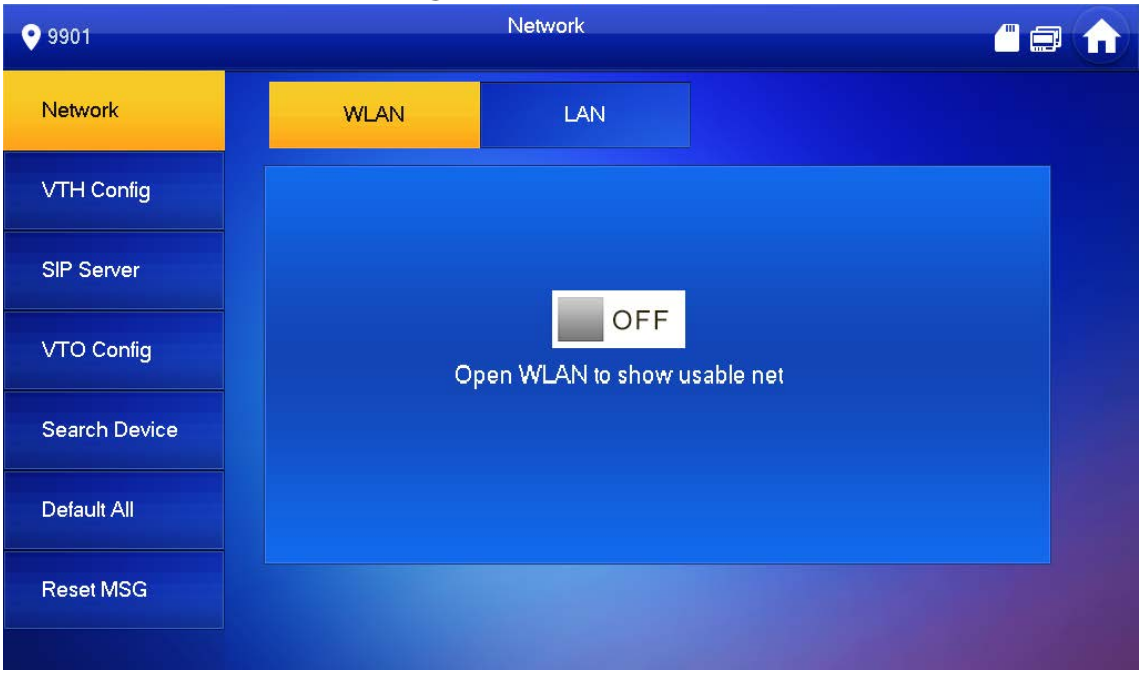


- WLAN

- Only certain models support WLAN function.
- Use a router with secured encryption protocols.

1) Turn on the WLAN function.

Figure 3-24 WLAN



2) Connect to a network.

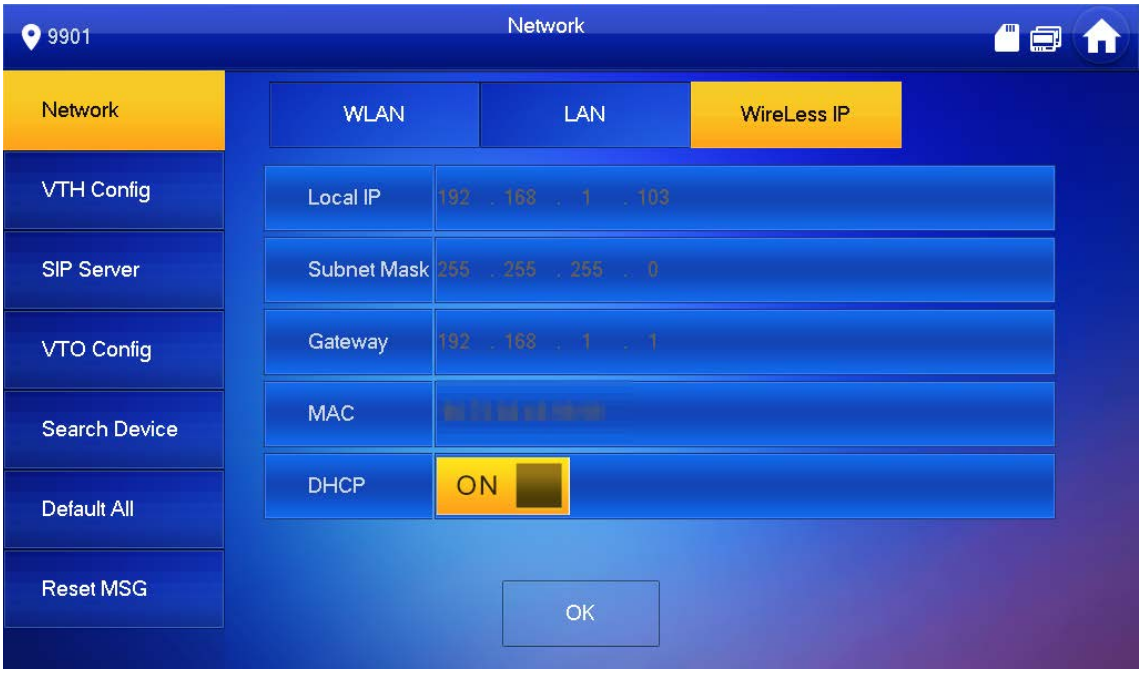
The system has 2 access ways as follows.

◇ Tap **Wireless IP** and enter **Local IP**, **Subnet Mask** and **Gateway**, and then tap **OK**.

◇ Tap **Wireless IP**, turn on **DHCP** to obtain the information automatically.

To obtain IP information with DHCP function, use a router with DHCP function.

Figure 3-25 Enable the DHCP function



3.1.2.3 VTH Config

Step 1 On the home screen, tap **Setting** for about 3 seconds.

Step 2 Enter password and tap **OK**.

Step 3 Tap **VTH Config**.

Figure 3-26 VTH configuration

Step 4 Configure VTH information.

- As a main VTH.

  Enter the room number (such as 9901 or 101#0) and other information, and then tap **OK**.

  - Room number must be the same with **VTH Short No.**, which is configured when adding VTHs on the VTO web interface. Otherwise, it will fail to connect to the VTO.
  - When there are extension VTHs, room numbers must end with #0. Otherwise, it will fail to connect to the VTO.

- As an extension VTH.

  1) Switch **Main** to **Extension**.
  2) Enter the room number (such as 101#1), Main VTH IP (IP address of the main VTH) and other information, and then tap **OK**.

  Main VTH Username and **Main VTH PWD** are the username and password of main VTH. Default user name is admin, and the password is the one set during initialization.

Step 5 Turn on the following functions as needed.

- **SSH**: The debugging terminal will connect to the VTH remotely through SSH protocol.
- **Security Mode**: Log in to the VTO in a secured way.
- **Password Protection**: Encrypt the password before sending out.

  It is recommended to turn off SSH, and turn on security mode and password protection. Otherwise, the device might be exposed to security risks and data leakage.

Step 6 Tap **OK**.

3.1.2.4 SIP Server

Configure SIP server information to connect to other devices.

Step 1 On the home screen, tap **Setting** for about 3 seconds.

Step 2 Enter the password and tap **OK**.

Step 3 Tap **SIP Server**.

Figure 3-27 SIP server

Step 4 Configure the parameters.

Table 3-5 SIP server parameters

Parameter	Description
Server IP	• When a platform works as the SIP server, it is the IP address of the platform. • When a VTO works as the SIP server, it is the IP address of the VTO.
Network Port	• 5080 when a platform works as the SIP server. • 5060 when a VTO works as the SIP server.
Username	Keep it default, or turn on **Custom Name**, and then you can edit the username.
Registration PWD	Keep it default.
Domain Name	When a VTO works as the SIP server, it must be VDP; otherwise, it can be null.
Username	SIP server login username and password.
Login PWD	

Step 5 Turn on **Enable Status** to enable the SIP server function.

Step 6 Tap **OK**.

3.1.2.5 VTO Configuration

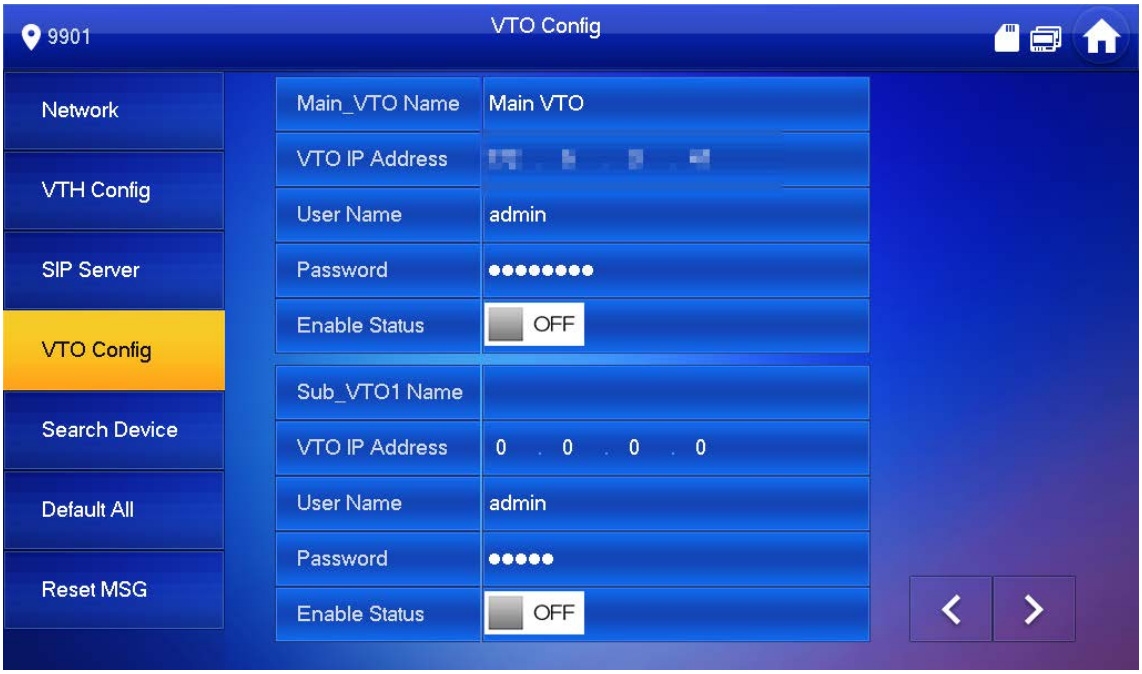
Add VTOs and fence stations to bind them with the VTH.

Step 1 On the home screen, tap **Setting** for about 3 seconds.

Step 2 Enter the password set during initialization, and tap **OK**.

Step 3 Tap **VTO Config**.

Figure 3-28 VTO config



Step 4 Add VTO or fence station.

- Add main VTO.

1) Enter the main VTO name, VTO IP address, username and password.

2) Turn on **Enable Status**.

User Name and **Password** must be consistent with the web page login username and password of the VTO.

- Add sub VTO or fence station.

1) Enter the sub VTO or fence Station name, IP address, username and password.

2) Turn on **Enable Status**.

Tap / to turn page and add more sub VTO or fence stations.

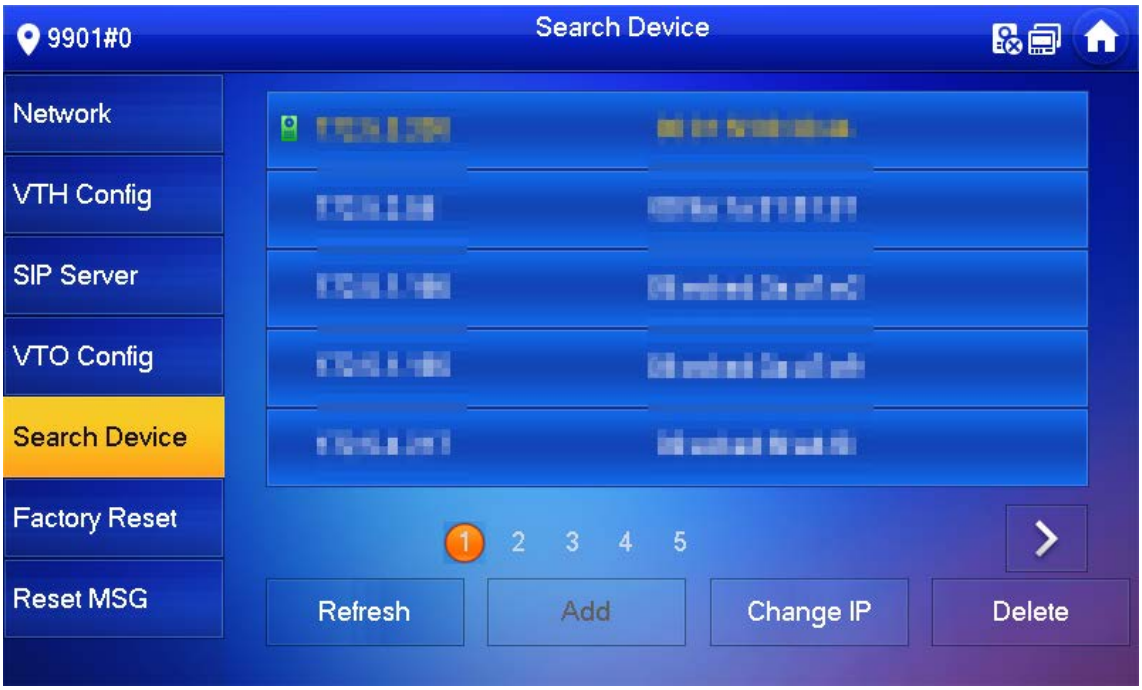
3.1.2.6 Searching Device

You can search for VTOs in the same network, and then add them or change their information.

Step 1 Tap **Search Device**.

If you select **Villa** in Figure 3-14, it will be **Add Device** with the similar function.

Figure 3-29 Search device

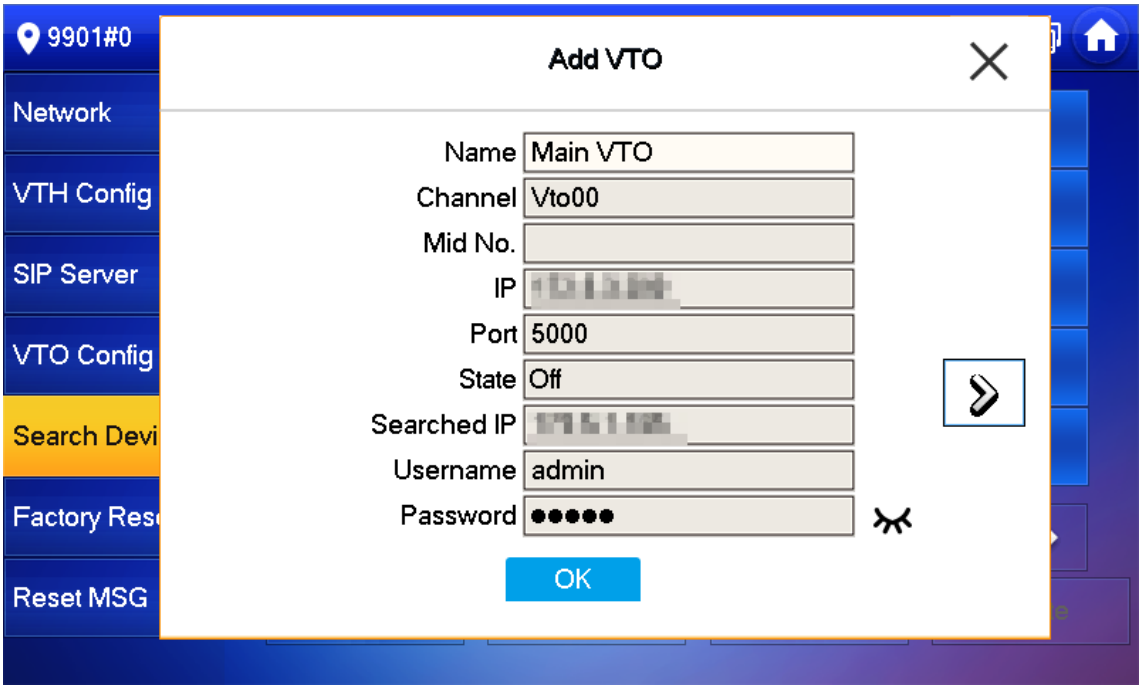


Step 2 Tap a device.

You can only add or edit villa VTOs.

- Tap **Add**.

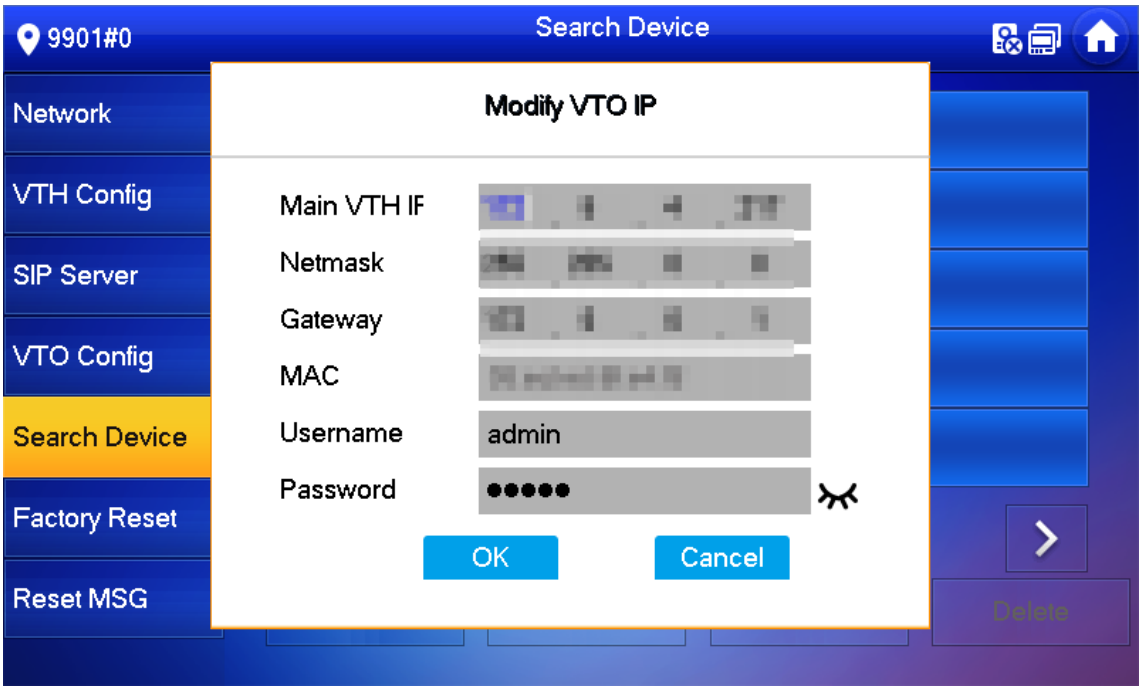
Figure 3-30 Add a VTO



- Tap **Change IP** to change the information of the VTO, including IP, netmask, and gateway.

Username and password cannot be changed here. They are the same as the ones used to log in to the web interface of the VTO, and are used to log in to the VTO.

Figure 3-31 Change the information of the VTO device

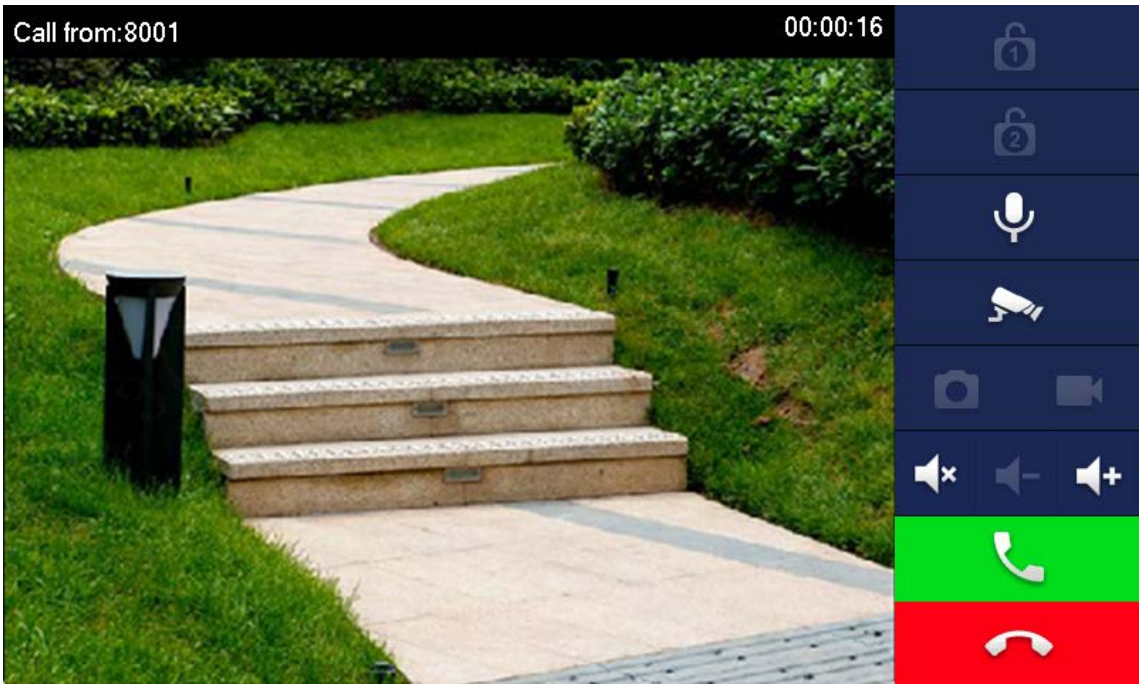


3.2 Commissioning

3.2.1 VTO Calling VTH

Dial the VTH room number (such as 101) on the VTO and the following image appears, which means all parameters are correctly configured.

Figure 3-32 Calling screen



3.2.2 VTH Monitoring VTO

VTH can monitor VTO, fence station or IPC. This section takes monitoring VTO as an example.

On the home screen of the VTH, select **Monitor > Door**, and then tap a VTO to enter monitoring image.

Figure 3-33 Door

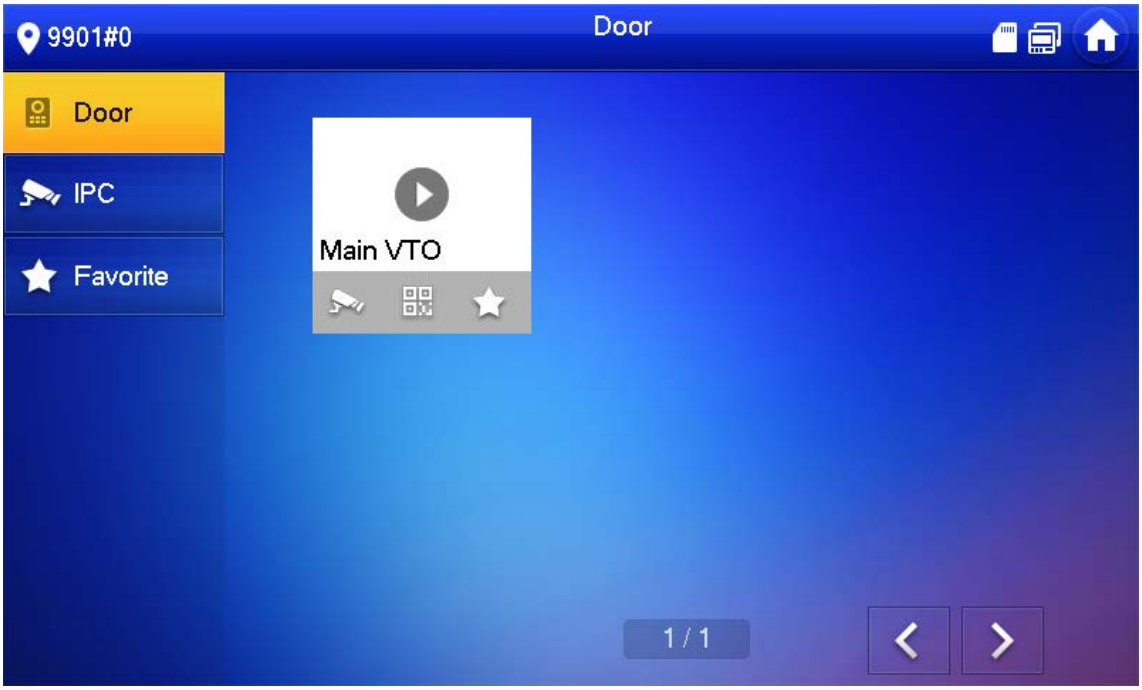


Figure 3-34 Monitoring image

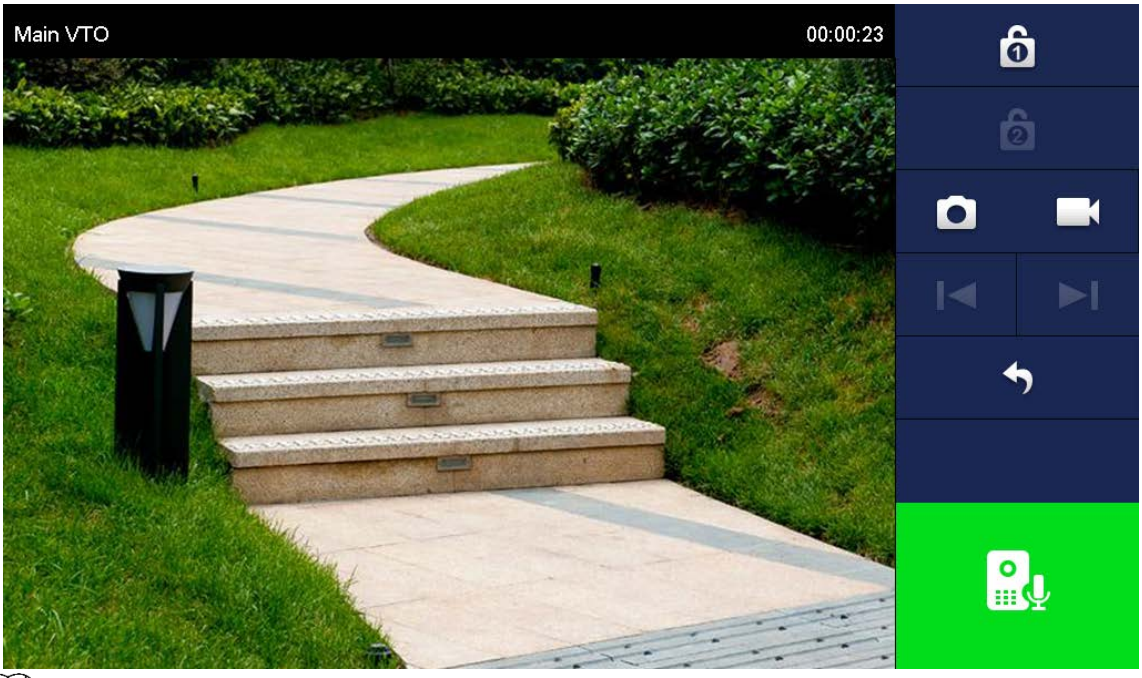

SD card is needed for recording and snapshot; otherwise, the icons will be gray.

4 Screen Operation

4.1 Home Screen

Figure 4-1 Home screen

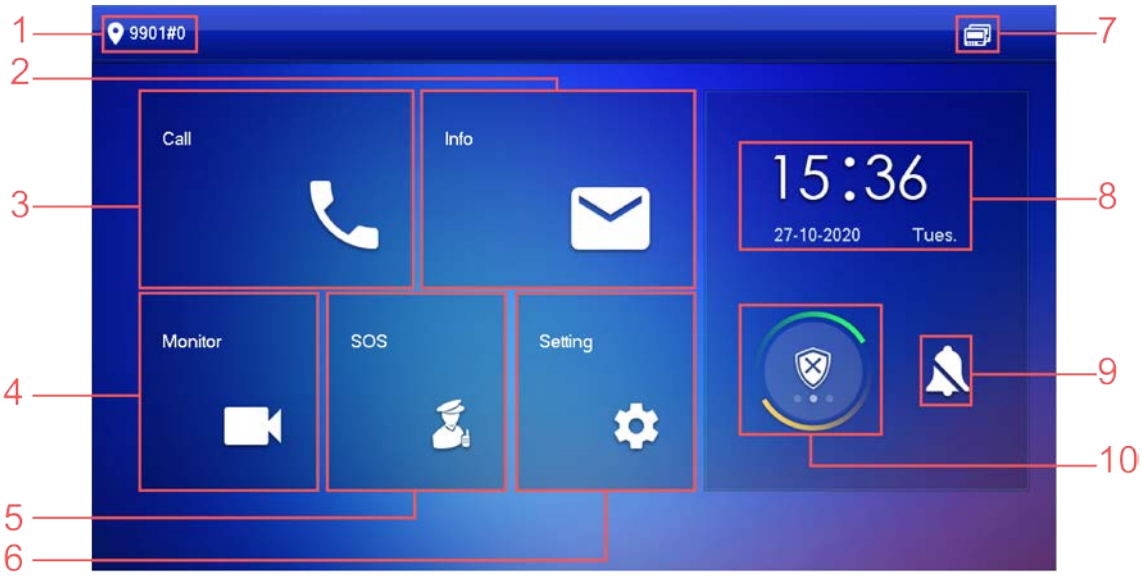

Table 4-1 Home screen description

No.	Name	Description
1	Room number	Number of the room where the VTH is located.
2	Info	• View, delete and clear announcements or security alarm information. • When the VTH does not have an SD card, and the video-audio message uploading function is enabled on the VTO, three tabs will be displayed, **Guest Msg, Guest Snap** and **Guest Video**. You can view, delete and clear the messages. • When the VTH has an SD card, the **Video Pic** tab will be displayed. View, delete and clear the videos and pictures.
3	Call	• Call other VTOs and VTHs. • View and manage the contacts and call records.
4	Monitor	Monitor VTOs, fence stations, IPCs and NVRs.
5	SOS	Make emergency call to the Call Management Center.
6	Setting	• Tap to enter system setting. • Tap for about 3 seconds, input the password set during initialization, and then enter project setting screen.
7	Status	• : Not connected to the network. • : Connected to the network through a cable. • : Wirelessly connected to the network.

No.	Name	Description
		• : Failed to connect to the main VTO; when disappeared, the device has connected to the main VTO. • : An SD card has been inserted into the device; when disappeared, the device does not have an SD card or support SD card. • : DND function has been enabled. It is not enabled by default.
8	Time and date	—
9	Do not disturb	Enable to not receive any call or message.
10	Arm/disarm	• Display unread alarm information. • Tap to select an arm mode.

4.2 Call

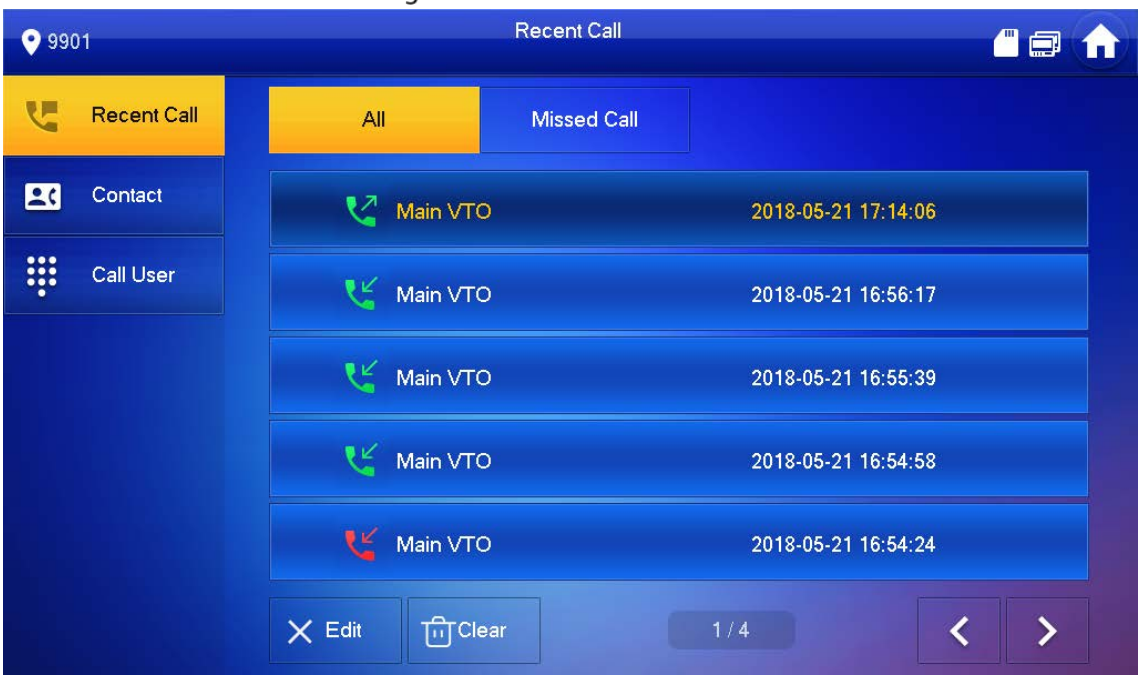
Manage contact, call and view call records.

4.2.1 Recent Call

Select **Call** > **Recent Call** to view and manage call records.

For missed calls, press the call button on the device front panel to go to the recent call screen.

Figure 4-2 Recent calls



- **Call back**: Tap a call record to call back.
- **Delete**: Tap **Edit**, and then tap **Delete** to delete a record.

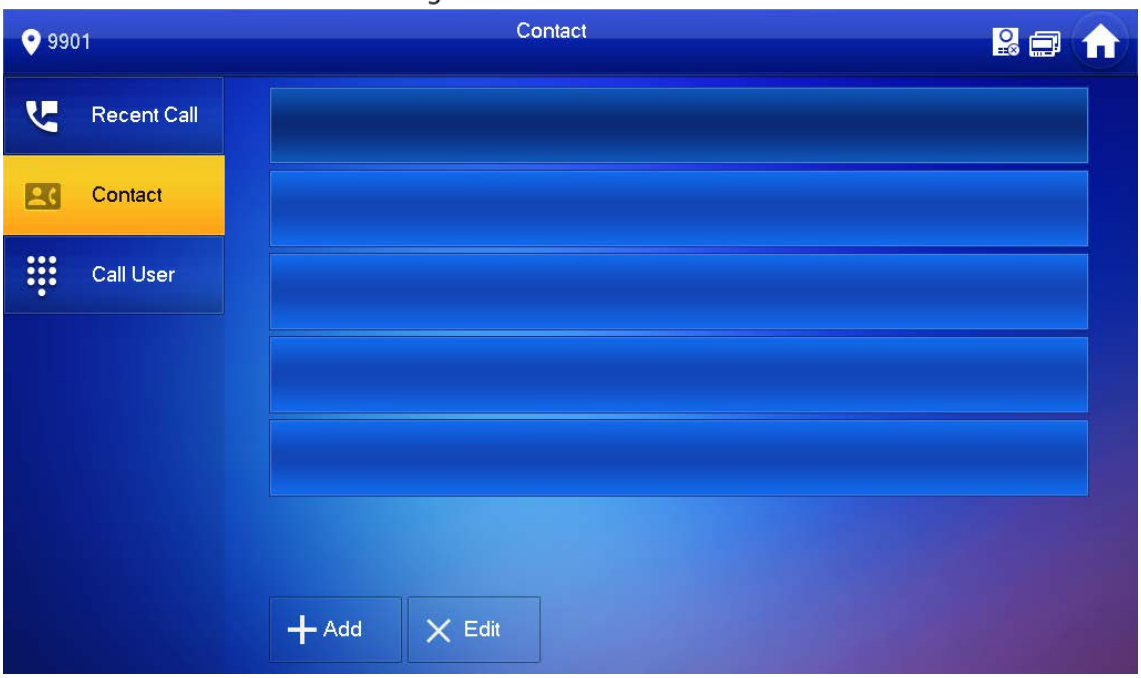
- **Clear**: Clear all record in the current tab (**All** or **Missed Call**).

If storage is full, the oldest records will be overwritten. Back up the records as needed.

4.2.2 Contact

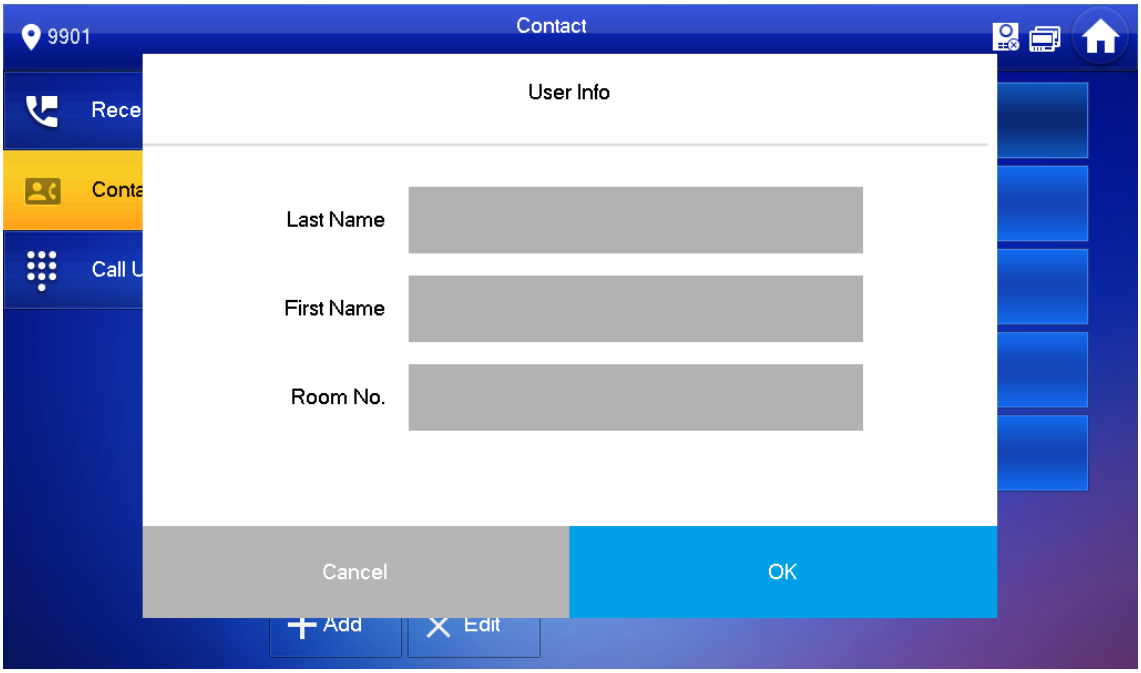
Select **Call** > **Contact**, and then add or edit the users.

Figure 4-3 Contact



Step 1 Tap **Add**.

Figure 4-4 User information



Step 2 Enter the information.

Step 3 Tap **OK**.

Related Operations

- Edit user information: Tap a user and tap **Edit**.
- Delete a user: Tap **Edit**, select a user, and then tap **Delete**.

You can select multiple contacts at the same time.

4.2.3 Calling User

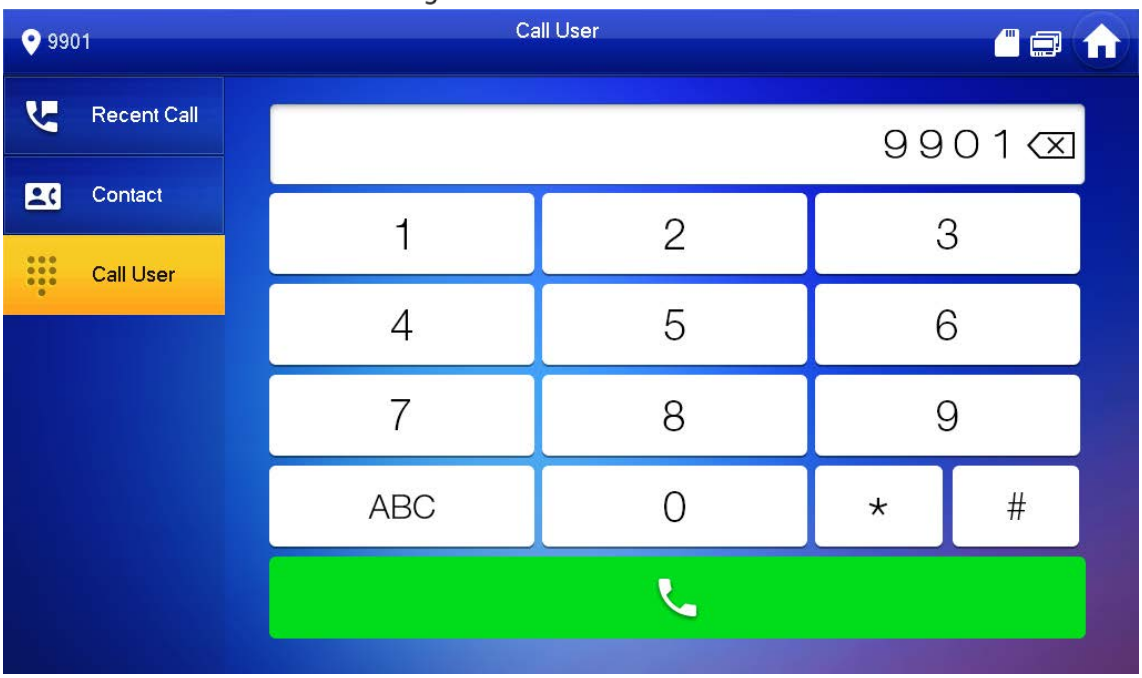
- Make sure that resident-to-resident call function has been enabled. See "4.6.6.4 QR Code" for details.
- Call function is used by VTH to call VTH.
- If both VTHs have a camera, bilateral video call can be provided.

4.2.3.1 By Room Number

On the **Call User** screen, dial and call the user.

Step 1 Select **Call > Call User**.

Figure 4-5 Call user



Step 2 Enter the room number (VTH room number).

- If the VTO works as the SIP server, dial room number directly.
- If the platform works as SIP server:
  - ◇ Call a user in the same unit and the same building, dial room number directly.
  - ◇ Call a user in other buildings or units, add the building number. For example, dial 1#1#101 to call Building 1 Unit 1 Room 101.

If main VTH (101#0) calls extension (101#1), please enter room no.: #1; if the extension calls the main VTH, please enter room no.: #0.

Step 3 Tap .

If the VTH has a camera, there will be videos after answering the call.

Figure 4-6 Calling

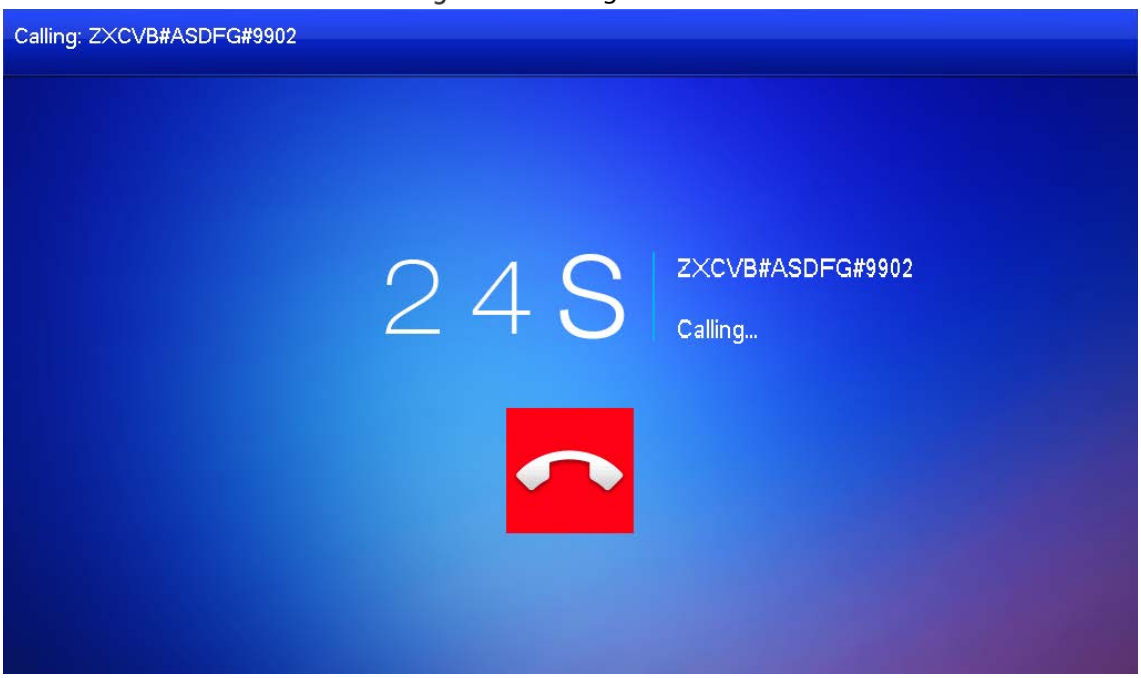


Figure 4-7 Call in progress

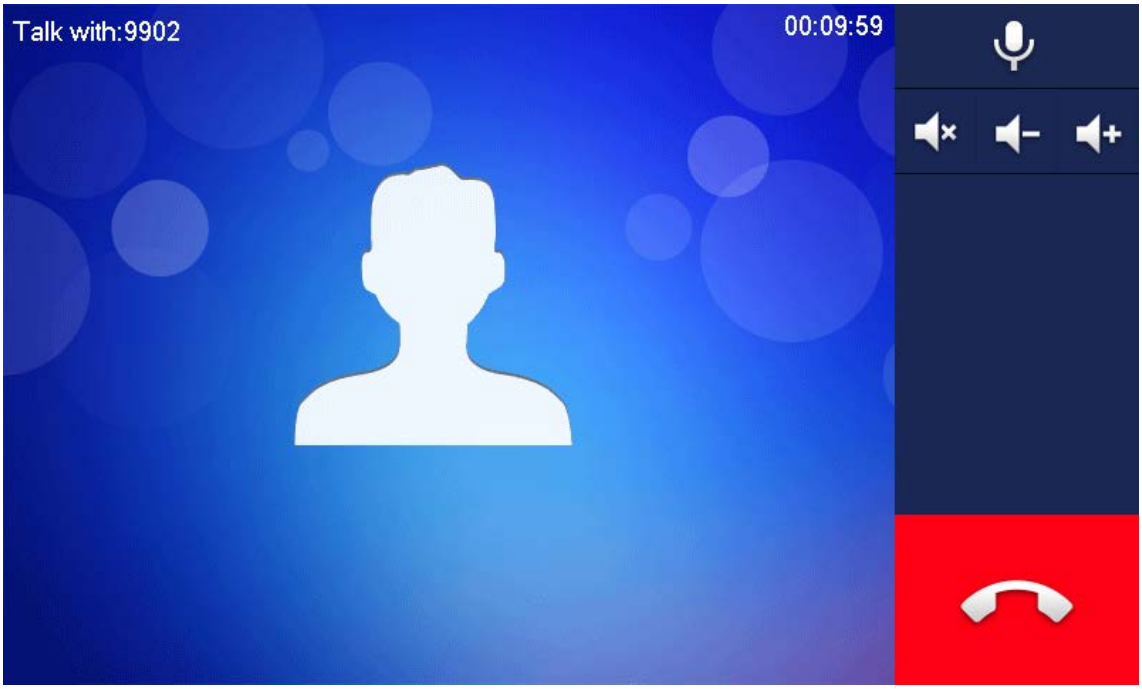


4.2.3.2 From Contact

Add contacts first. See "4.2.2 Contact ".

Step 1 Select **Call > Contact**.

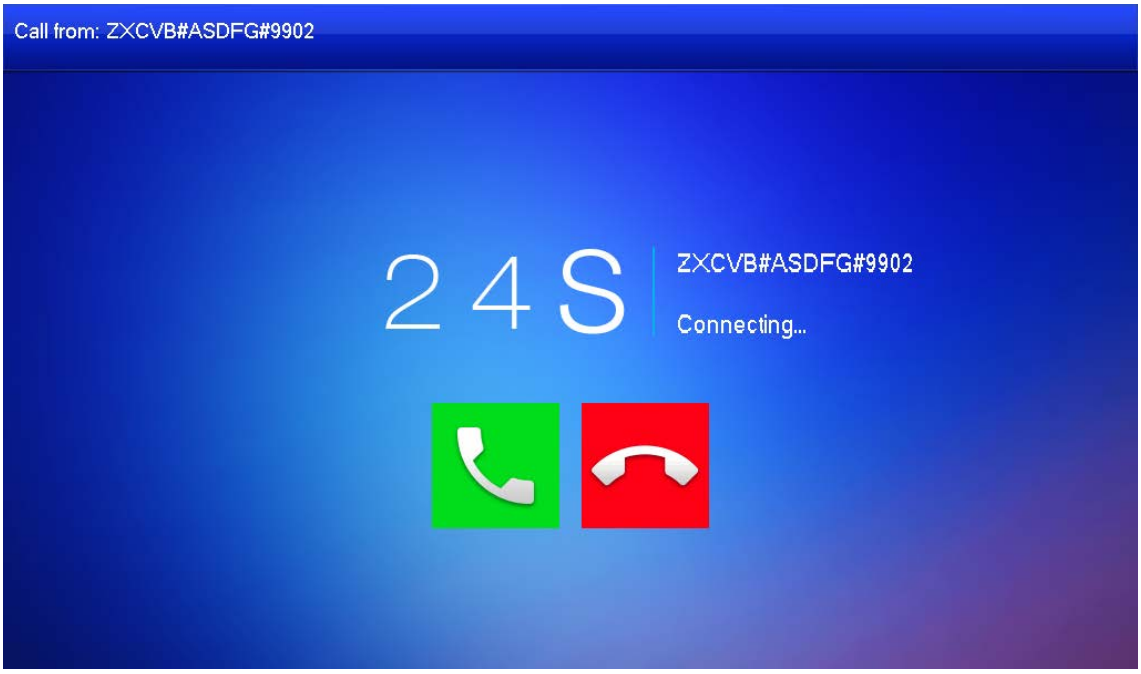
Step 2 Select the one you want to call.

Step 3 Tap  to start.

4.2.4 Calling from User

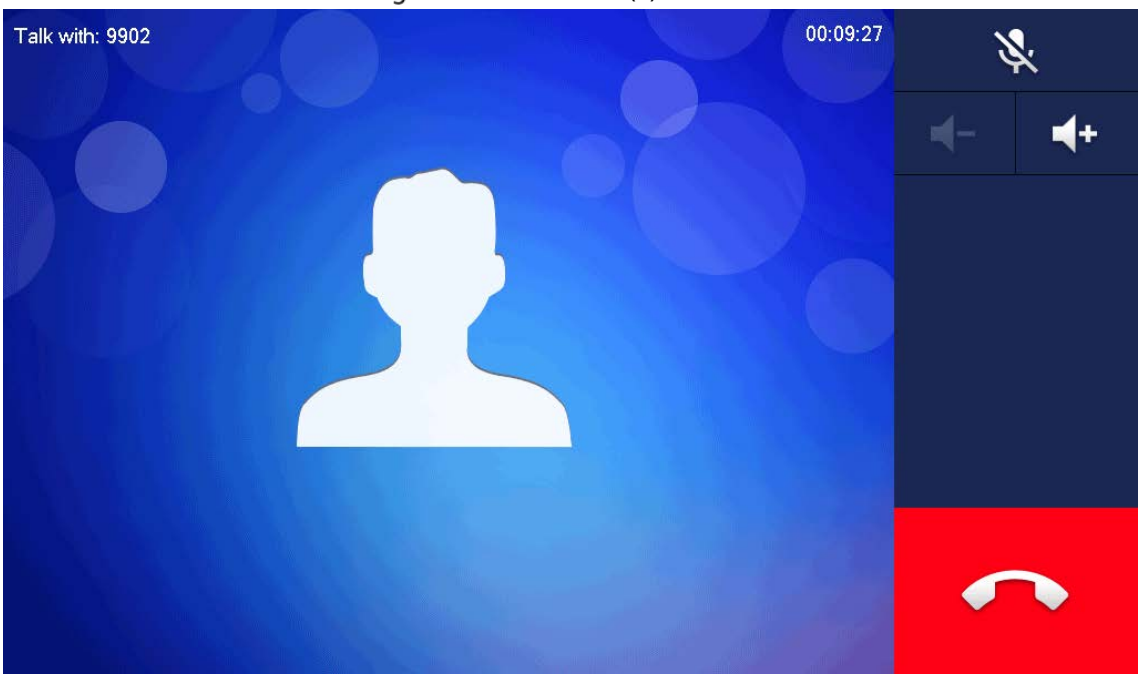
When receiving calls from other VTHs, the following screen will be displayed.

Figure 4-8 Call screen (1)



-  : Answer.
-  : Hang up.

Figure 4-9 Call screen (2)



4.2.5 Calling from VTO

Step 1 Dial VTH room number (such as 9901) on VTO to call VTH.

Step 2 On the VTH screen, tap **Answer**.

Figure 4-10 Call from VTO

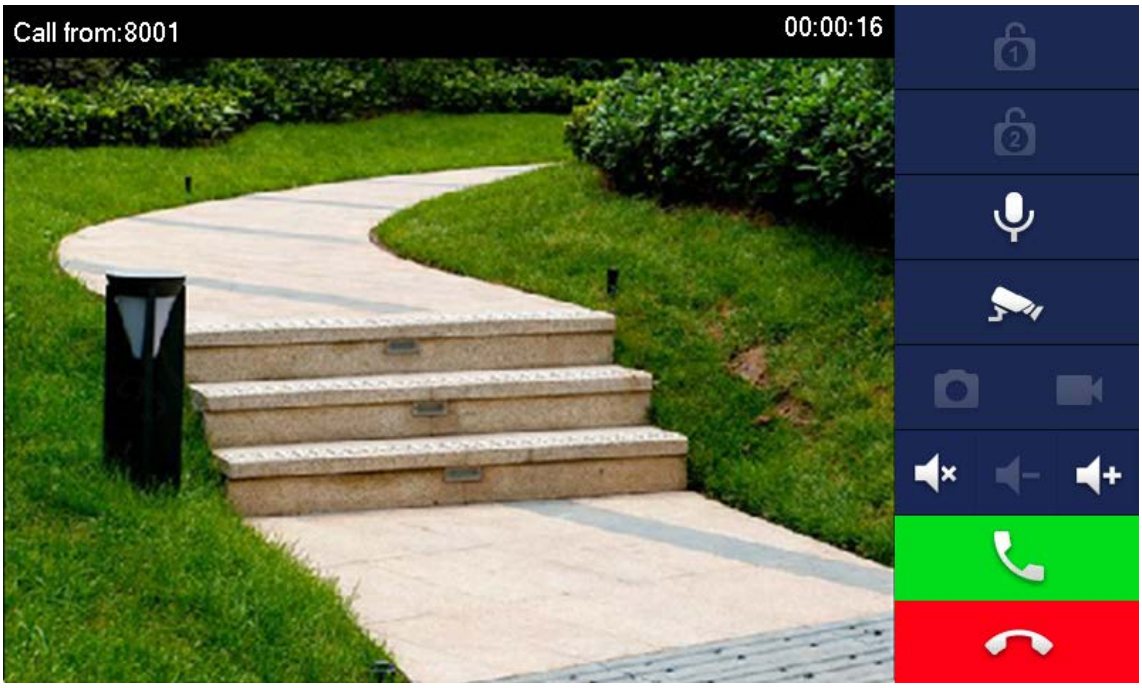


Table 4-2 On-screen icon description

Key	Description
	Remotely unlock the door where the VTO is installed. The system provides 2-channel unlock. If the icon is gray, it means that the unlock function of this channel is not available.
	Tap to talk to the VTO.
	Select an IPC in **Favorite** to monitor.
	Take snapshots. This key will be gray if SD card is not inserted.
	Take recording. Complete recording when the call is completed or by tapping  . ● This key is gray if SD card is not installed. ● Videos are stored in SD card of this VTH. If the SD card is full, the earlier videos will be covered.
	Mute.

Key	Description
	Turn down the volume.
	Turn up the volume.
	Answer calls.
	Hang up calls.

4.3 Information

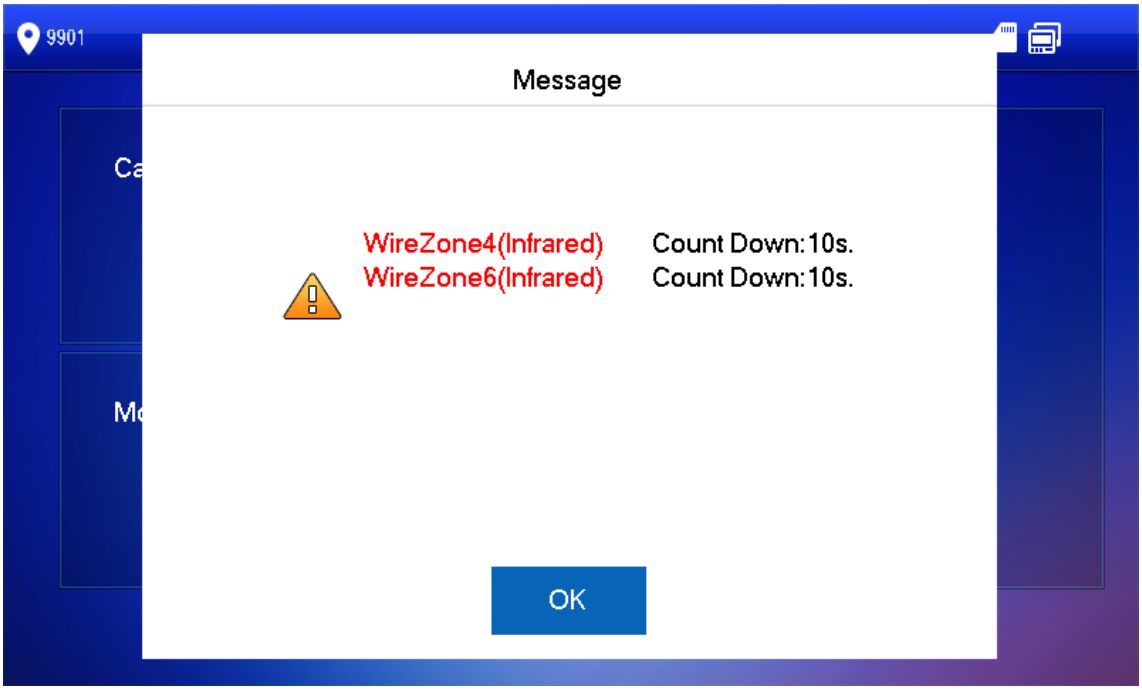
You can view and manage different kinds of information.

- Information in **Security Alarm** and **Publish Info** is stored in the VTH, and the one in **Guest Message** and **Video Pictures** is stored in the SD card, which means you need an SD card for these two functions.
- Only certain models support SD card.
- If the storage in the Device or SD card is full, the oldest records will be overwritten. Back up the records as needed.

4.3.1 Security Alarm

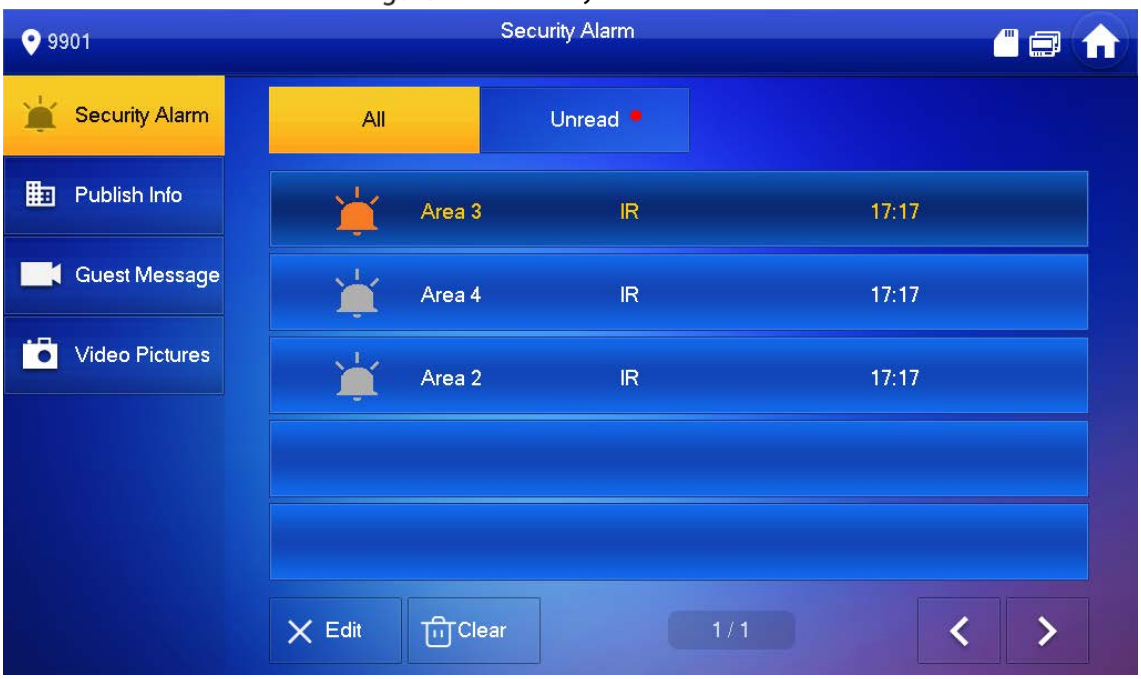
When an alarm is triggered, there will be 15s alarm sound, and the screen below will be displayed. The alarm information will be uploaded to the alarm record screen and management platform.

Figure 4-11 Message



Select **Info > Security Alarm**, and then you can view and manage all alarm records.

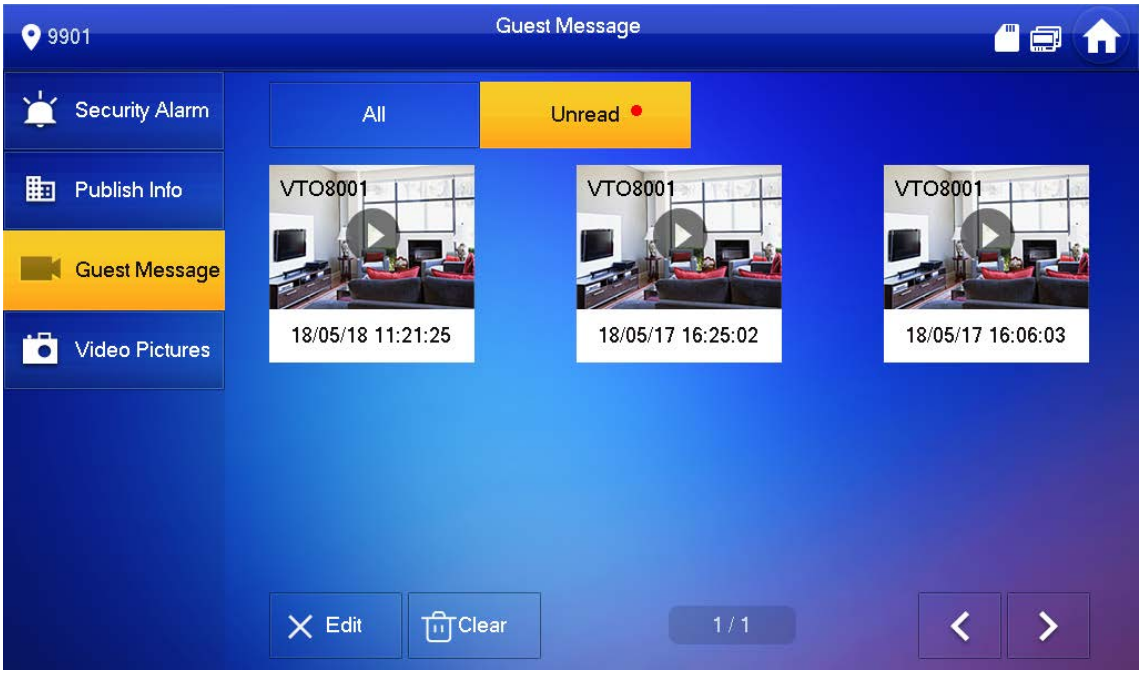
Figure 4-12 Security alarm



4.3.2 Guest Message

Select **Info > Guest Message**, and then you can view and manage all messages.

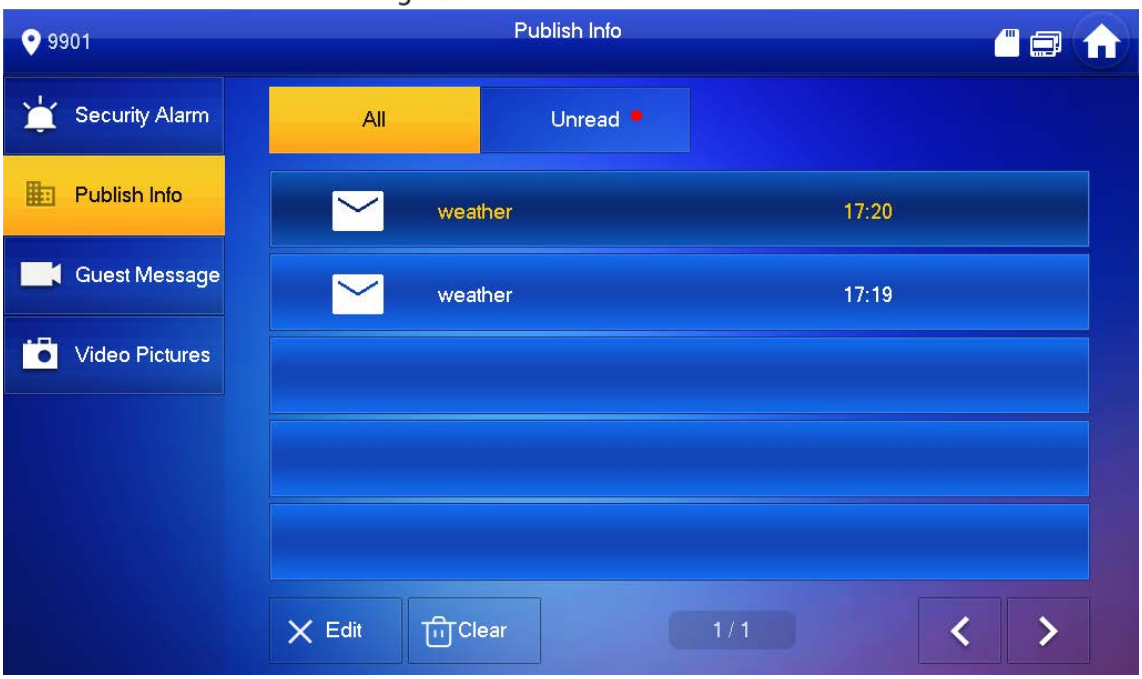
Figure 4-13 Guest message



4.3.3 Publish Information

Select **Info > Publish Info**, and then you can view and manage all messages.

Figure 4-14 Publish info



4.3.4 Video Pictures

Select **Info > Video Pictures**, and then you can view and manage pictures and videos.

Figure 4-15 Records

4.4 Monitor

You can monitor VTO, fence station or IPC on the VTH.

4.4.1 Monitoring VTO

When adding VTOs, make sure that the username and password of each device is consistent with their web login username and password. See "3.1.2.5 VTO Configuration " for details. Otherwise, monitoring will not work properly.

When monitoring, press the call button on the device front panel to talk to the VTO.

Step 1 Select **Monitor > VTO**.

Figure 4-16 Door

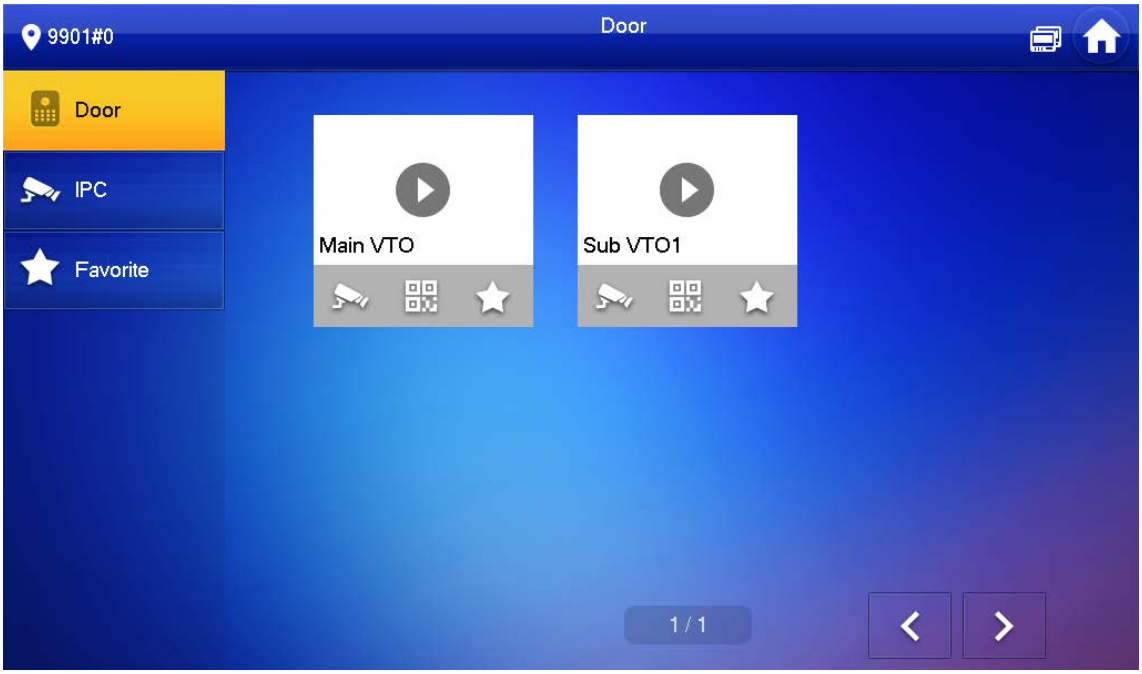


Table 4-3 Function description

Icon	Description
	Add the VTO or fence station to **Favorite**.
	Select an IPC, and when this VTO or fence station calls, you will see the monitoring image from this IPC. Add an IPC first. See "4.4.2.1 Adding IPC " for details.
	Display the serial number of the VTO or fence station in QR code. Scan the QR code in the app to add it to the app, and then you can monitoring the VTO from your smartphone. See "5 DSS Agile VDP" for details.

Step 2 Tap .

Figure 4-17 Monitoring VTO

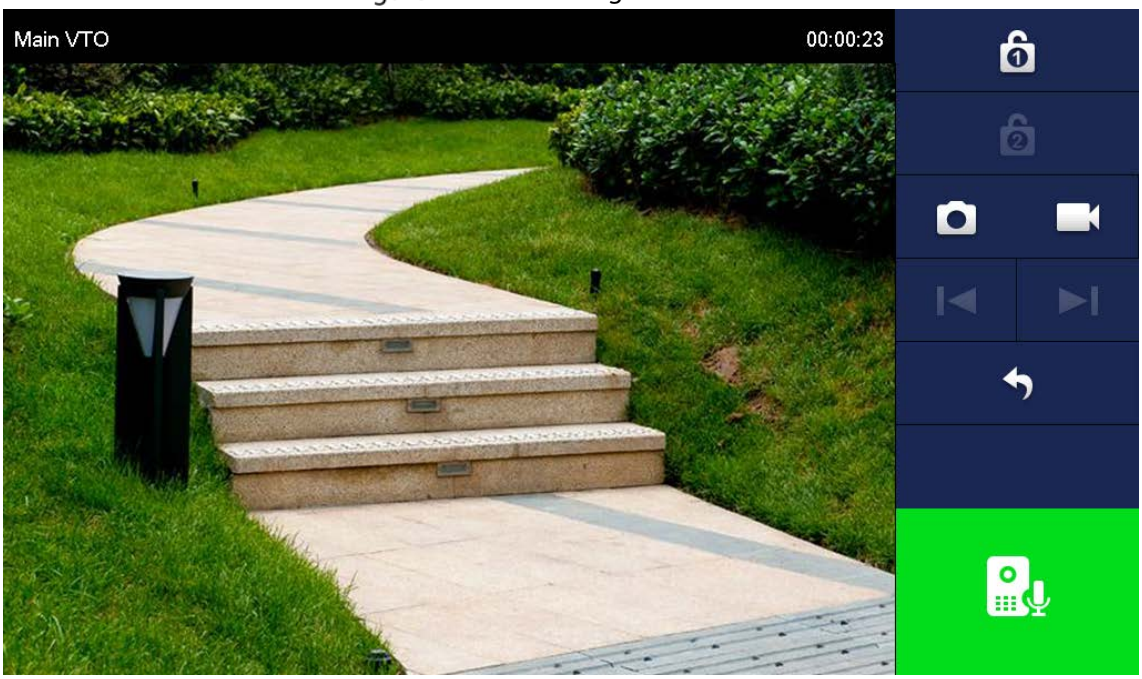

Table 4-4 Function description

Icon	Description
	Remotely unlock the door where the VTO is located. The system provides 2-channel unlock function. If the icon is gray, it means that unlock function of this channel is not available.
	Take snapshot. An SD card is needed to use this function.
	Tap to start recording, and it will stop when the call is completed or by tapping . If the SD card is full, the oldest videos will be overwritten. An SD card is needed to use this function.
	If the VTH is connected to multiple VTOs/IPCs, tap and to switch device.
	Exit monitoring.
	Tap to speak to the other end device, and tap again to stop.

4.4.2 Monitoring IPC

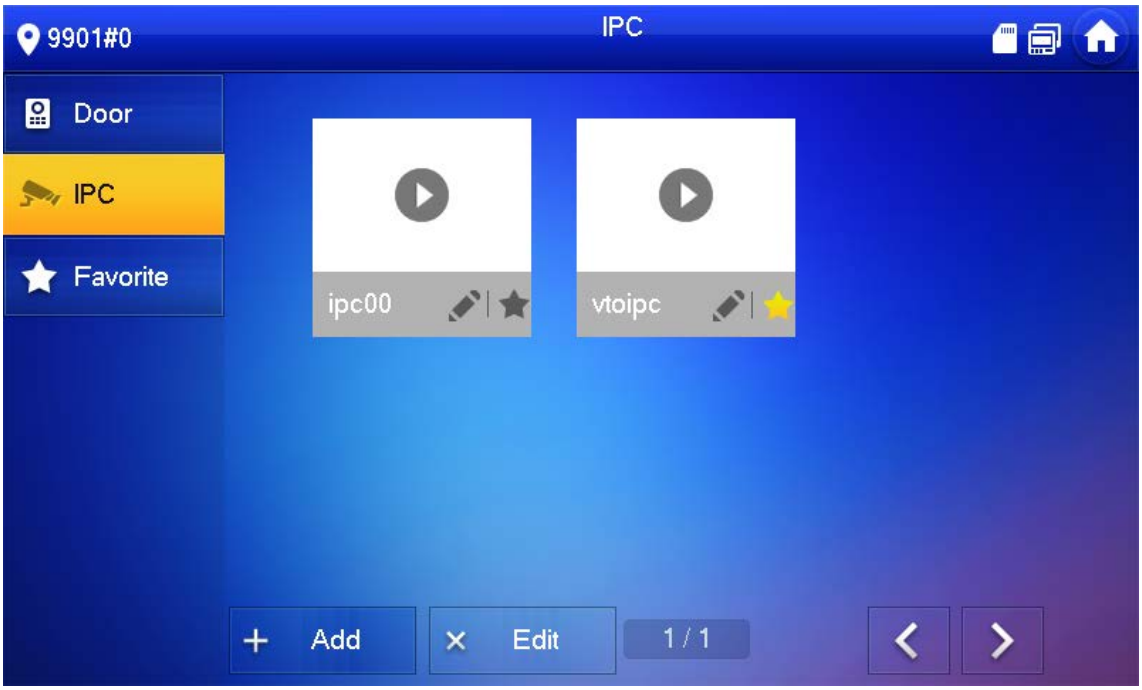
4.4.2.1 Adding IPC

- IPCs added to the main VTO and Express/DSS will be synchronized to the VTH. The synchronized IPCs cannot be deleted.
- Before adding an IPC, make sure that it is powered on, and connected to the same network as the VTH.

Step 1 Select **Monitor** > **IPC**.

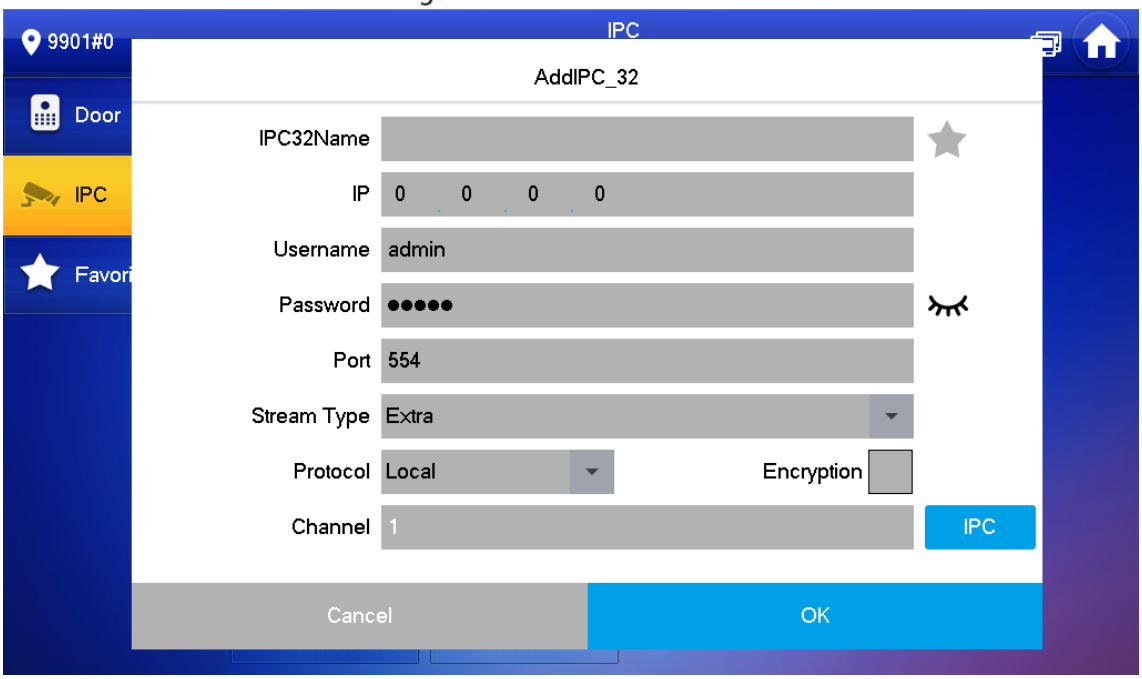
You can tap ★ to add the IPC to **Favorites**.

Figure 4-18 IPC



Step 2 Tap **Add**.

Figure 4-19 Add IPC



Step 3 Configure the parameters.

Table 4-5 Parameter description

Parameter	Description
IPC	Select IPC or NVR.
IPC32 Name	Name of the IPC/NVR.
IP	IP address of the IPC/NVR.
User Name	Web page login username and password of the IPC/NVR.
Password	
Port	554 by default.
Stream Type	• Main stream: High definition that needs large amount of bandwidth. Applicable to local storage. • Extra stream: Relatively smooth image that needs small amount of bandwidth. Applicable to network with insufficient bandwidth.
Protocol	It includes local protocol and Onvif protocol. Please select according to the protocol of the connected device.
Encryption	Enable it if the IPC to be added is encrypted.
Channel	• If IPC is connected, default setting is 1. • If NVR is connected, set channel number of IPC on NVR.

Step 4 Tap **OK**.

4.4.2.2 Modifying IPC

Step 1 Select **Monitor > IPC**.

Step 2 Tap of IPC.

Step 3 Modify IPC parameters. See Table 4-5 for details.

Step 4 Tap **OK**.

4.4.2.3 Deleting IPC

Delete an IPC that has been added. However, IPCs synchronized from the VTO or the platform cannot be deleted.

Step 1 Select **Monitor** > **IPC**.

Step 2 Tap **Edit**.

Step 3 Select **IPC**.

Step 4 Tap **Delete** to delete the selected IPC.

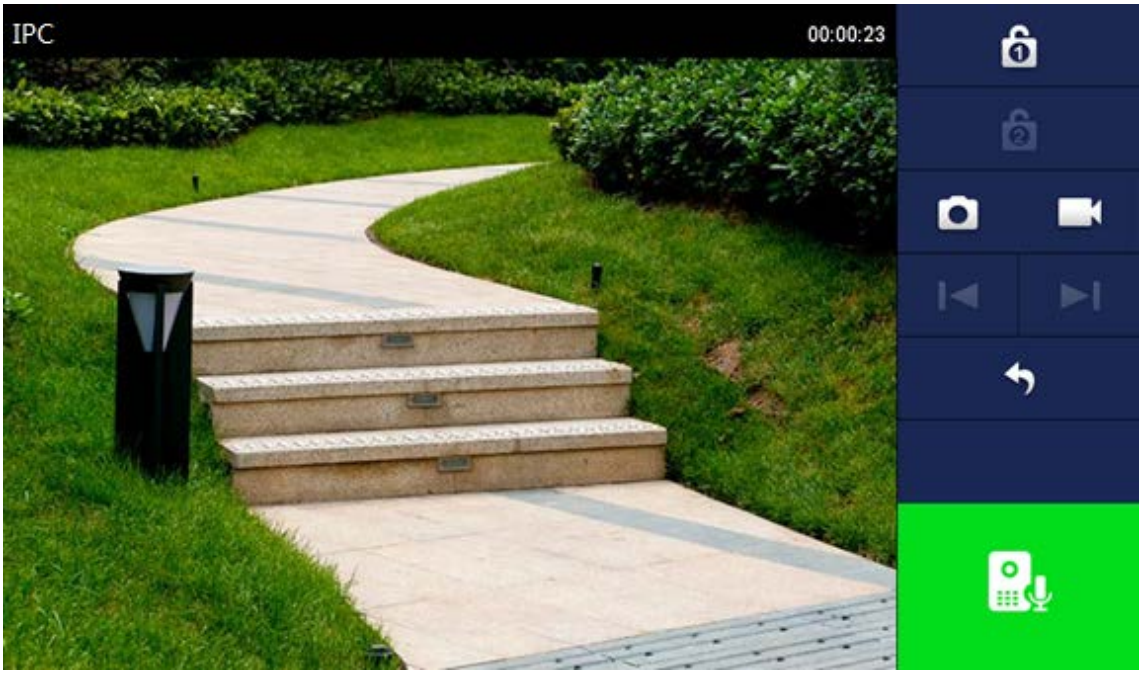
4.4.2.4 Monitoring IPC

Monitor the IPC.

Step 1 Select **Monitor** > **IPC**.

Step 2 Select the IPC to be monitored, and tap .

Figure 4-20 Monitoring video



Step 3 Please monitor the VTO by reference to Table 4-4.

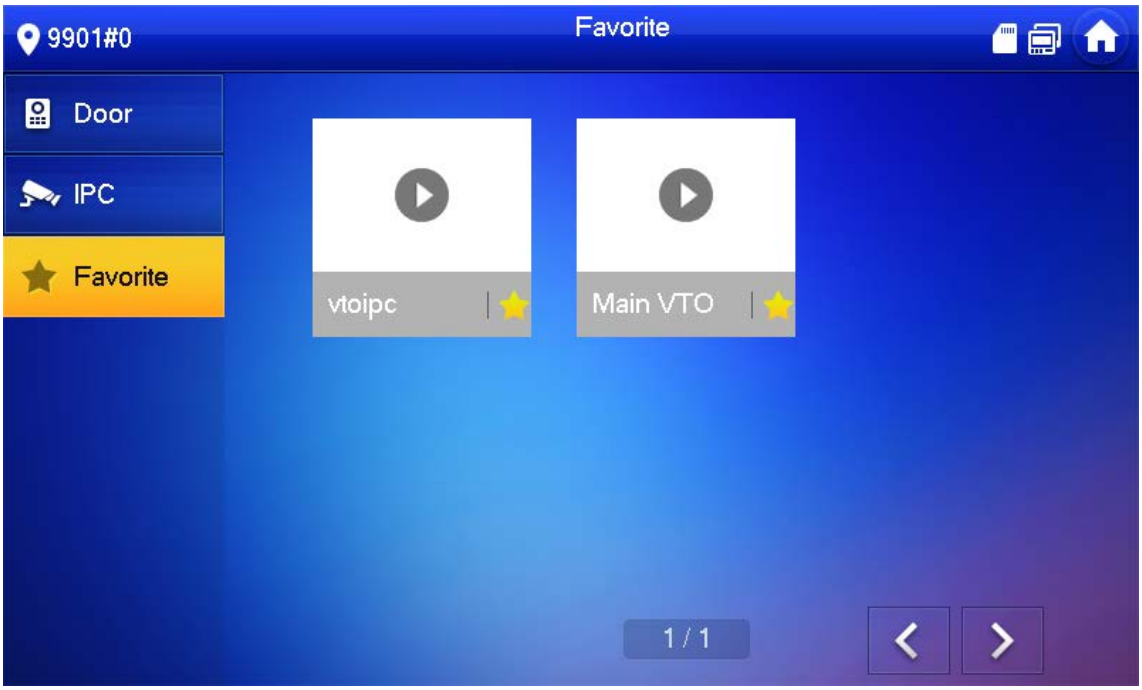
4.4.3 Favorite

Displays VTOs, fence stations or IPCs that have been added to **Favorite**.

To view favorite list, make sure that VTOs, fence stations or IPCs have been added to **Favorite**. Otherwise, the list is empty.

Step 1 Select **Monitor** > **Favorite**.

Figure 4-21 Favorite



Step 2 Select the device to be monitored, and tap .

The system displays monitoring screen. In case of multiple devices in **Favorite**, tap / to switch and monitor them.

4.5 SOS

Please make sure that the management center has been connected. Otherwise, it will fail to call.

In case of emergency, press the SOS button on the device front panel, or tap **SOS** on the home screen to call the management center.

4.6 Setting

4.6.1 Ring Settings

Set VTO ring, VTH ring, alarm ring and other rings.

- There is an SD card on the VTH, and users can import ring tones to the SD card.
- Ring tones must be stored in the /Ring folder at the root directory of the SD card.

- Audio files must be .pcm files (audio files of other formats cannot be played if you change their extension names).
- Audio file size must be less than 100 KB.
- Ring tone format: .pcm.
- You can only customize 10 ring tones. Other ring tones will not be displayed at the VTH.

4.6.1.1 VTO Ring

Set a ring for the connected VTO, and support to set a maximum of 20 VTOs.

Step 1 Tap **Setting**.

Step 2 Select **Ring > VTO Ring Setup**.

Tap < or > to page up and down.

Figure 4-22 VTO ring setup

Step 3 Tap text box to select rings, and tap + and − to adjust the volume.

4.6.1.2 VTH Ring

Set the ring for this VTH.

Step 1 Tap **Setting**.

The system pops up **Password** prompt box.

Step 2 Input login password and tap **OK**.

The default login password is 123456. Please refer to "4.6.6.3 Password Setting" for details.

Step 3 Select **Ring > VTH Ring Setup**.

Figure 4-23 VTH ring setup

Step 4 Tap text box to select rings, and tap + and − to set the volume.

4.6.1.3 Alarm Ring

Set the ring when the VTH gives an alarm.

Step 1 Tap **Setting**.

Step 2 Enter login password and tap **OK**.

The default login password is 123456. Please refer to "4.6.6.3 Password Setting" for details.

Step 3 Select **Ring > Alarm Ring Setup**.

Figure 4-24 Alarm ring

Step 4 Tap text box to select rings, and tap + and − to set the volume.

4.6.1.4 Other Ring Settings

Set VTO ring time, VTH ring time, MIC volume, talk volume and ring mute setting.

⚠

VTO Ring Time and **VTH Ring Time** of extension VTH are synchronized with main VTH, and cannot be set.

Step 1 Tap **Setting**.

Step 2 Enter login password and tap **OK**.

The default login password is 123456. Please refer to "4.6.6.3 Password Setting" for details.

Step 3 Select **Ring** > **Other**.

Figure 4-25 Other settings

Step 4 Tap + and − to set the time or volume. Tap OFF to enable **Ring Mute**, and the icon becomes ON.

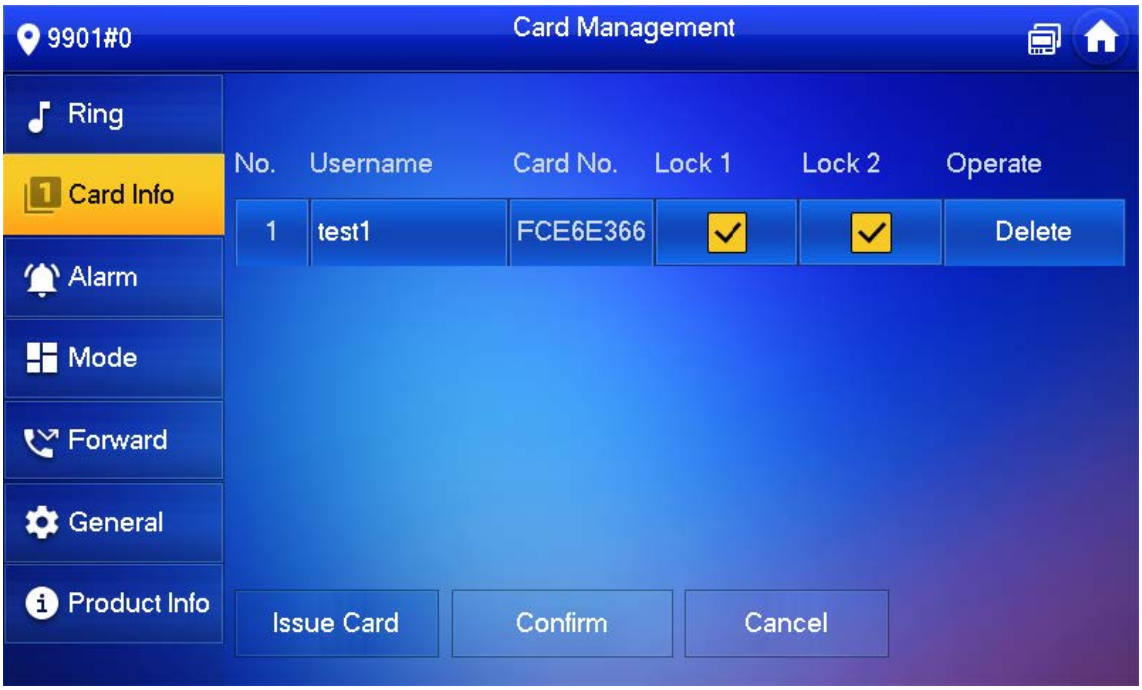
- VTO ring time: ring time when a VTO calls this VTH.
- VTH ring time: ring time when another VTH calls this VTH.

4.6.2 Card Information

Issue and manage card information.

This function is only available under **Villa**.

Figure 4-26 Card management



Step 1 Click **Issue Card**.

Step 2 Swipe the card on the corresponding VTO.

Step 3 The card information will be added to the VTH. Assign unlock permission by selecting **Lock 1** and **Lock 2** as needed.

Step 4 Click **Confirm**.

Click **Delete** to delete the card information.

4.6.3 Alarm Setting

Set wire zone, wireless zone and alarm output.

Zones can be set under disarm mode.

4.6.3.1 Wire Zone

Set zone type, NO/NC, alarm status and delay. It supports to set 8 zones at most.

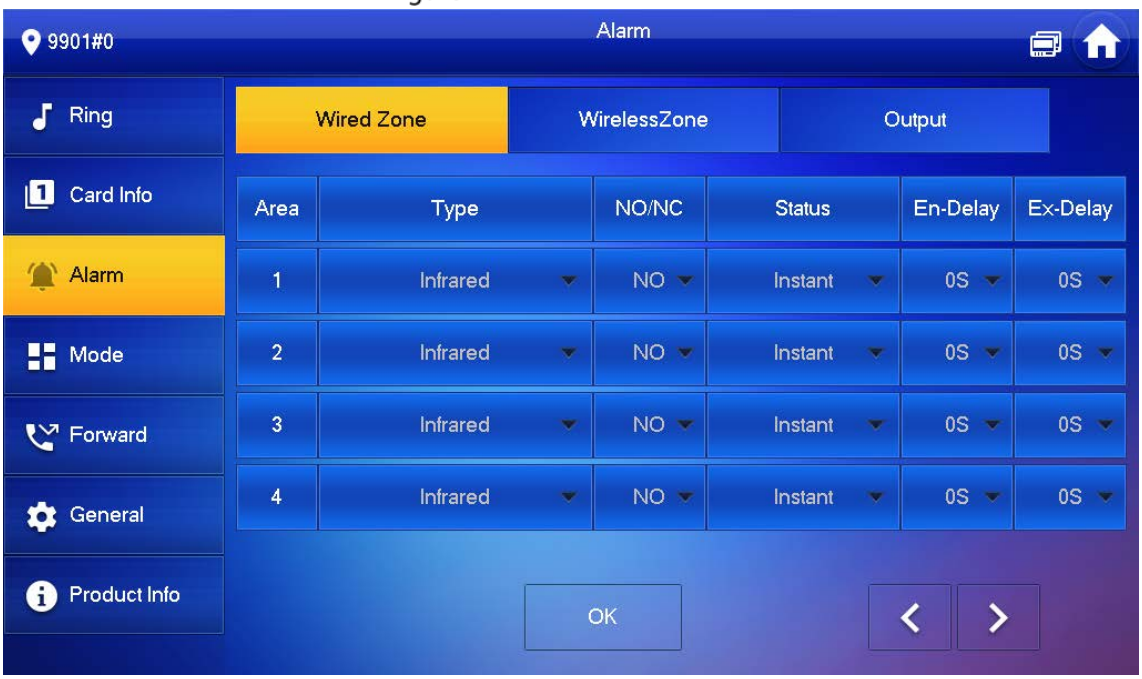
Step 1 Tap **Setting**.

Step 2 Enter login password and tap OK.

The default login password is 123456. Please refer to "4.6.6.3 Password Setting" for details.

Step 3 Select **Alarm** > **Wire Zone**.

Figure 4-27 Wire zone



Step 4 Tap corresponding positions to set area type, NO/NC, alarm status, enter delay and exit delay.

Table 4-6 Parameter description

Parameter	Description	
Area	The number cannot be modified.	
NO/NC	Select NO (normally open) or NC (normally closed) according to detector type. It shall be the same as detector type.	
Type	Select corresponding type according to detector type, including IR, gas, smoke, urgency btn, door, burglar alarm, perimeter and doorbell.	
Status	• **Instant Alarm**: After armed, if an alarm is triggered, the device produces siren at once and enters alarm status. • **Delay Alarm**: After armed, if an alarm is triggered, the device enters alarm status after a specified time, during which you can disarm and cancel the alarm. • **Bypass**: Alarm will not be triggered in the area. After disarmed, this area will restore to normal working status. • **Remove**: The area is invalid during arm/disarm. • **24 Hour**: Alarm will be triggered all the time in the area regardless of arm or disarm. A zone in **Remove** status cannot be bypassed.	
Enter Delay	After entering delay, when armed area triggers an alarm, entering armed area from non-armed area within the delay time period will not lead to linkage alarm. Linkage alarm will be produced if delay time comes to an end and it is not disarmed.	Delay is only valid to the areas of **Delay Alarm**.
Exit Delay	After arm, **Delay Alarm** area will enter arm status at the end of **Exit Delay**. If multiple areas set the exit delay, screen prompt will conform to maximum delay time.	

Step 5 **Tap** OK to complete setting.

4.6.3.2 Wireless Zone

⚠

Only devices with wireless function have this function.

Add, delete and set wireless zones.

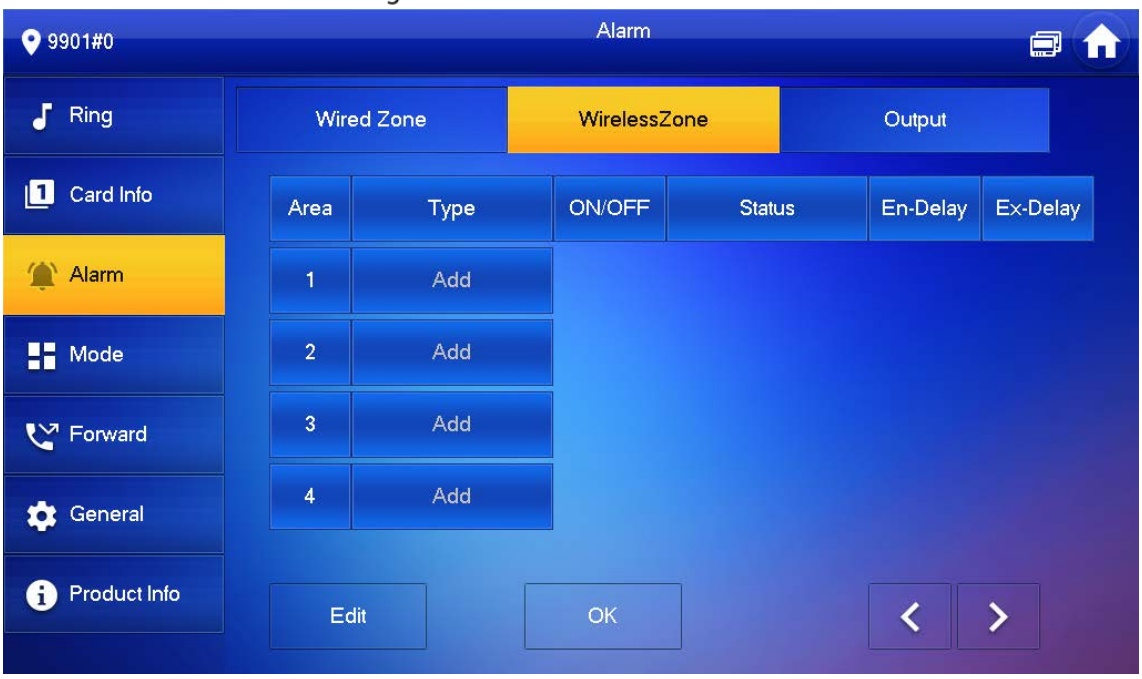
Step 1 Tap **Setting**.

Step 2 Enter login password and tap **OK**.

The default login password is 123456. Please refer to "4.6.6.3 Password Setting" for details.

Step 3 Select **Alarm > Wireless Zone**.

Figure 4-28 Wireless zone



Step 4 Tap **Add**.

Step 5 Tap wireless code button of wireless device. See wireless device user's manual for details.

After successful coding, the area info is displayed.

Step 6 Tap corresponding positions to set alarm status, enter delay and exit delay.

See Table 4-6 for details.

Tap **Edit** to select a zone and **Delete** to delete the selected area.

4.6.3.3 Alarm Output

After enabling alarm output, when other devices call this VTH, the alarm output device will output alarm info.

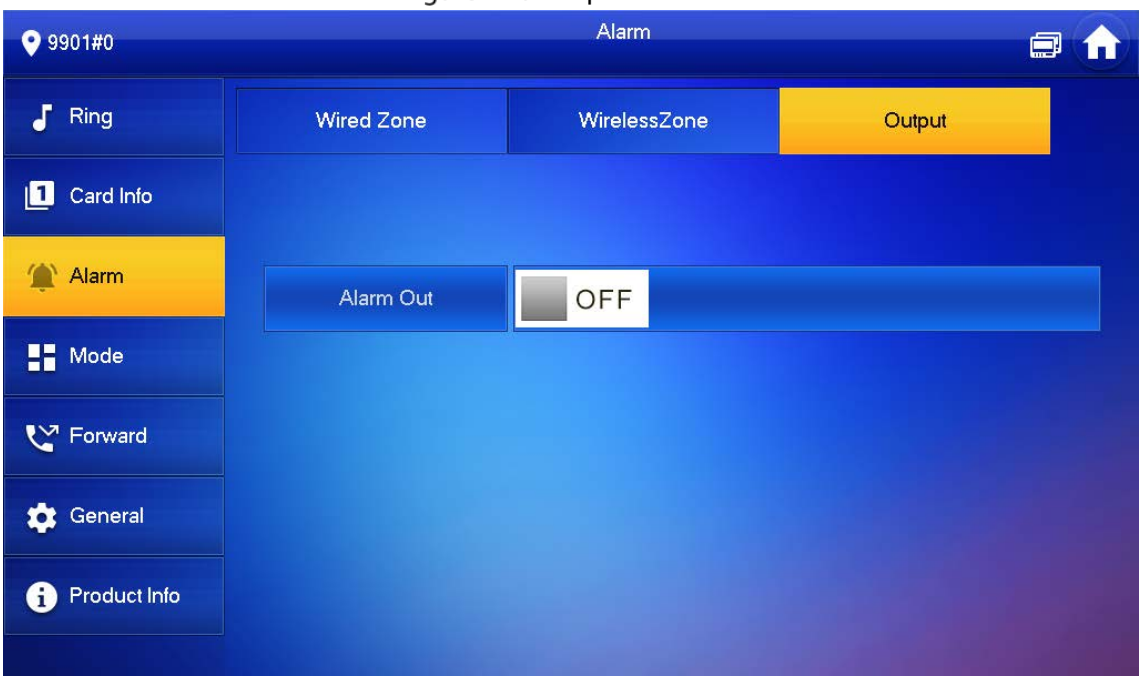
Step 1 Tap **Setting**.

Step 2 Enter login password and tap **OK**.

The default login password is 123456. Please refer to "4.6.6.3 Password Setting" for details.

Step 3 Select **Alarm > Output**.

Figure 4-29 Output



Step 4 Tap OFF to enable alarm output function, and the icon becomes ON.

4.6.4 Mode Setting

Set area on/off status under different modes.

Area mode can be set only in disarm status.

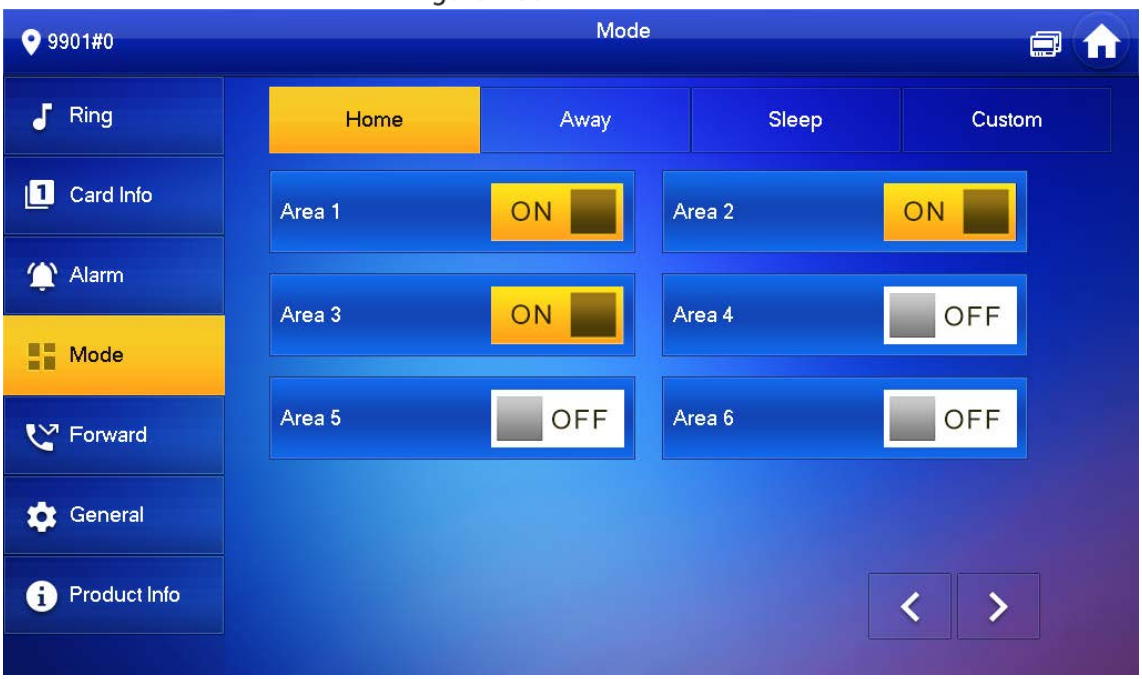
Step 1 Tap **Setting**.

Step 2 Enter login password and tap **OK**.

The default login password is 123456. Please refer to "4.6.6.3 Password Setting" for details.

Step 3 Tap **Mode**.

Figure 4-30 Mode



Step 4 Select arm mode in every tab.

Step 5 Tap OFF in every area to add it into arm mode.

Multiple areas can be added into one arm mode simultaneously, whereas one area can be added into different modes.

4.6.5 Forward Setting

Forward incoming calls.

Parameters at this screen are set on main VTH only, and extension VTH synchronizes with main VTH.

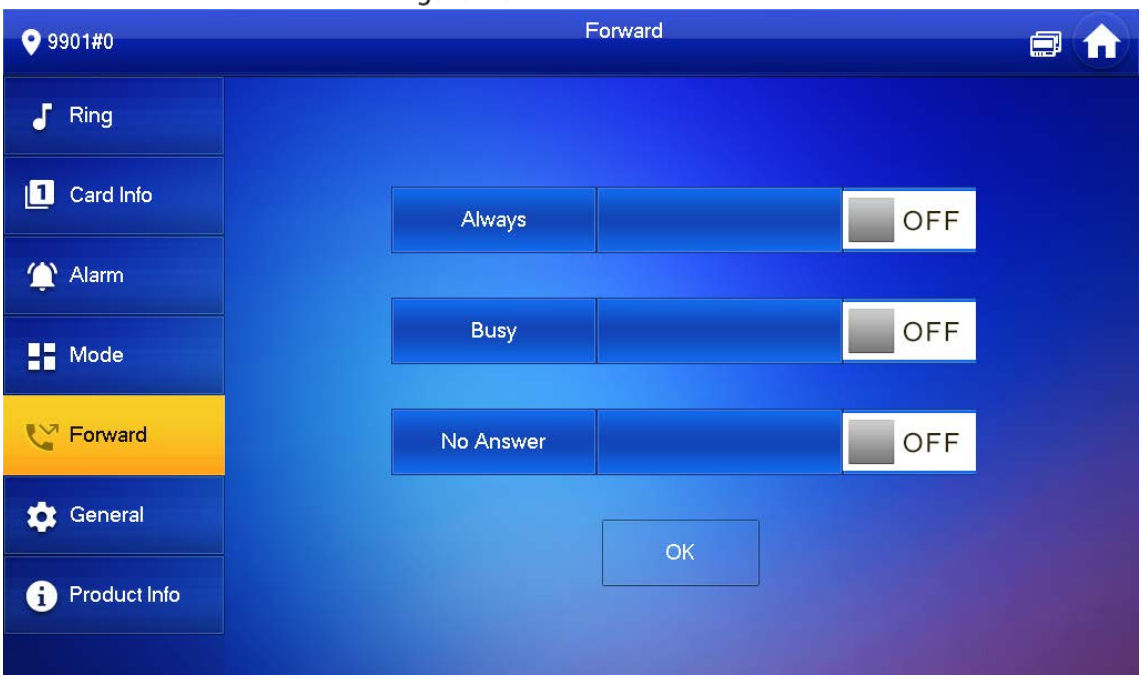
Step 1 Tap **Setting**.

Step 2 Enter login password and tap **OK**.

The default login password is 123456. Please refer to "4.6.6.3 Password Setting" for details.

Step 3 Tap **Forward**.

Figure 4-31 Forward



Step 4 Enter VTH number in the corresponding forward mode, tap OFF to enable the forward function.

Table 4-7 Parameter description

Parameter	Description
Always	All incoming calls will be forwarded to preset number immediately.
Busy	When the user is busy, incoming call from the third party will be forwarded to preset number. If No Answer is not set, when the user refuses to answer, the incoming call will be deemed as busy forwarding.
No Answer	If no one answers after VTH ring time, the incoming call will be forwarded to preset number. Set VTH ring time at **Setting > Ring > Other interface**.

- To forward to a user of another building or unit, the forward number is Building + Unit + VTH room number. For example, input 1#1#101 for 101 of Unit 1, Building 1.
- To forward to a user of the same unit, the forward number is VTH room number.

Step 5 Tap **OK** to save settings.

4.6.6 General Setting

Set VTH time, display, password and others.

4.6.6.1 Time Setting

Set VTH system time, time zone and DST.

⚠

Parameters at this screen are set on main VTH only, and extension VTH synchronizes with main VTH.

Step 1 Tap **Setting**.

Step 2 Enter login password and tap **OK**.

The default login password is 123456. Please refer to "4.6.6.3 Password Setting" for details.

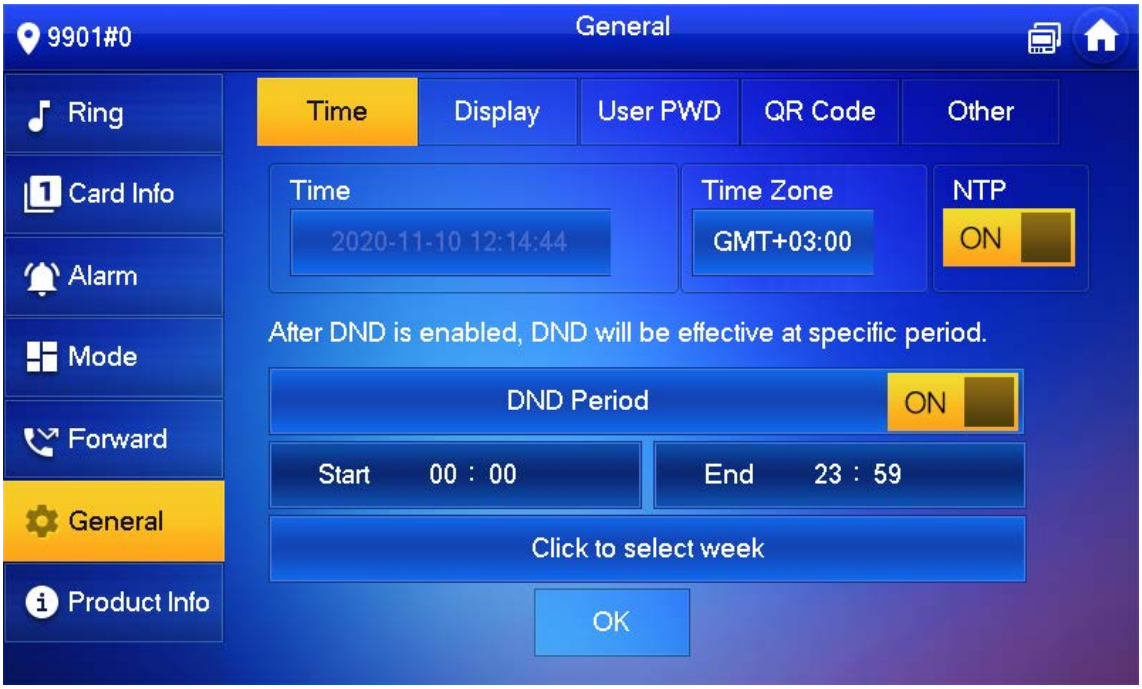
Step 3 Select **General** > **Time**.

Figure 4-32 Set time and time zone

Step 4 Set time parameter.

- Turn on **NTP**, the VTH will syncronize time with the NTP server automatically; turn it off to set time or time zone manually.

Figure 4-33 Set DND period



- Turn on DND period, set start and end time or tap **Click to select week** to select the day(s), and you will not receive any call or message during this period.

4.6.6.2 Display Setting

Set VTH screen brightness, screenclose time and prepare the VTH for cleaning screen.

Step 1 Tap **Setting**.

Step 2 Enter login password and tap **OK**.

Default login password is 123456. Please refer to 4.6.6.3 Password Setting for details.

Step 3 Select **General** > **Display**.

Figure 4-34 Display

Step 4 Configure parameters.

- Tap + and − to adjust **Brightness** and **Screenclose Time**.
- Tap **Clean** and the screen will be locked for 30 seconds. During the period, you can clean the screen. It restores after 10 seconds.

4.6.6.3 Password Setting

Set login password, arm/disarm password, unlock password and anti-hijacking password of VTH setting screen. Login password, arm/disarm password and unlock password are 123456 by default, whereas anti-hijacking password is the reversed login password.

Parameters at this screen are set on main VTH only, and extension VTH synchronizes with main VTH.

Step 1 Tap **Setting**.

Step 2 Enter login password and tap **OK**.

Step 3 Select **General** > **User Password**.

Figure 4-35 User password

Step 4 Enter your new password in the **New PWD** text box and confirm it in **Confirm PWD**.

Step 5 Tap **OK** to complete password modification.

4.6.6.4 QR Code

Download the app on your smartphone by scanning the QR code, register the VTH on the app, and then you can unlock the door, or talk to the VTH, and more directly on your smartphone.

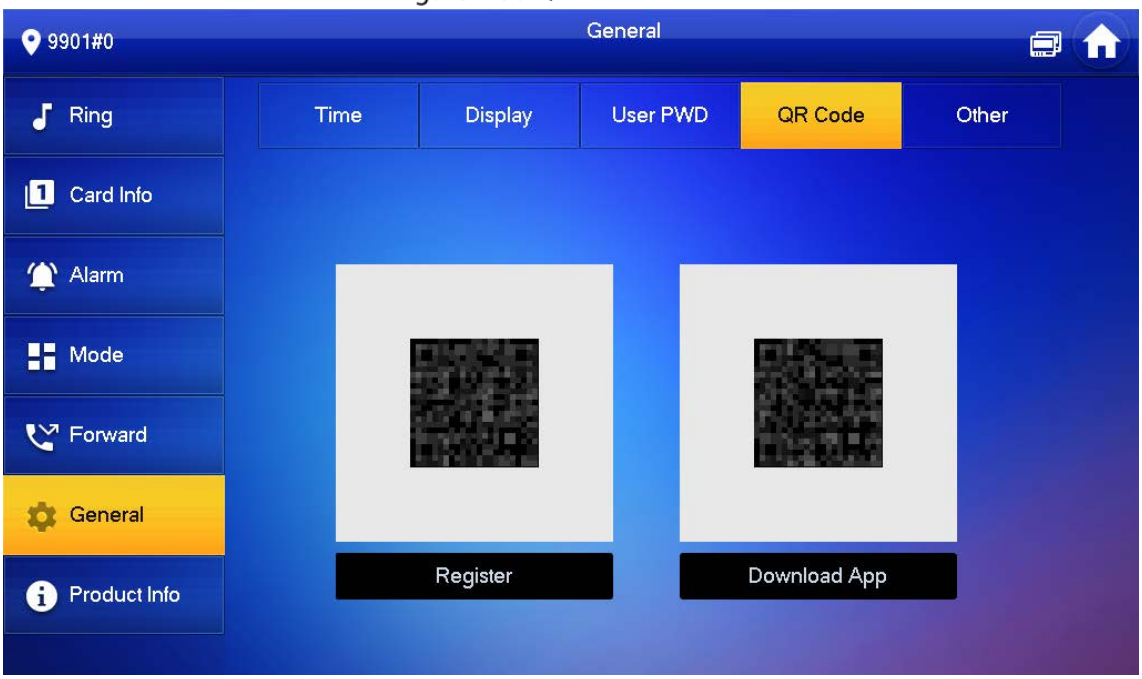
Step 1 Tap **Setting**.

Step 2 Enter login password and tap **OK**.

The default login password is 123456. Please refer to "4.6.6.3 Password Setting" for details.

Step 3 Select **General** > **QR Code**.

Figure 4-36 QR Code



Step 4 Scan the QR code on the right of the screen to download the DSS Agile VDP on your smartphone.

Step 5 Scan the QR code on the left of the screen to register the VTH to the app.

For detailed operations of the app, see "5 DSS Agile VDP".

4.6.6.5 Other Settings

Set monitor time, record time, VTO message time, VTO talk time, resident-to-resident call enable, resident-to-resident call time, auto capture and touch ring.

Extension VTH can configure **Auto Capture** and **Touch Ring**, but other parameters synchronize with main VTH and cannot be configured.

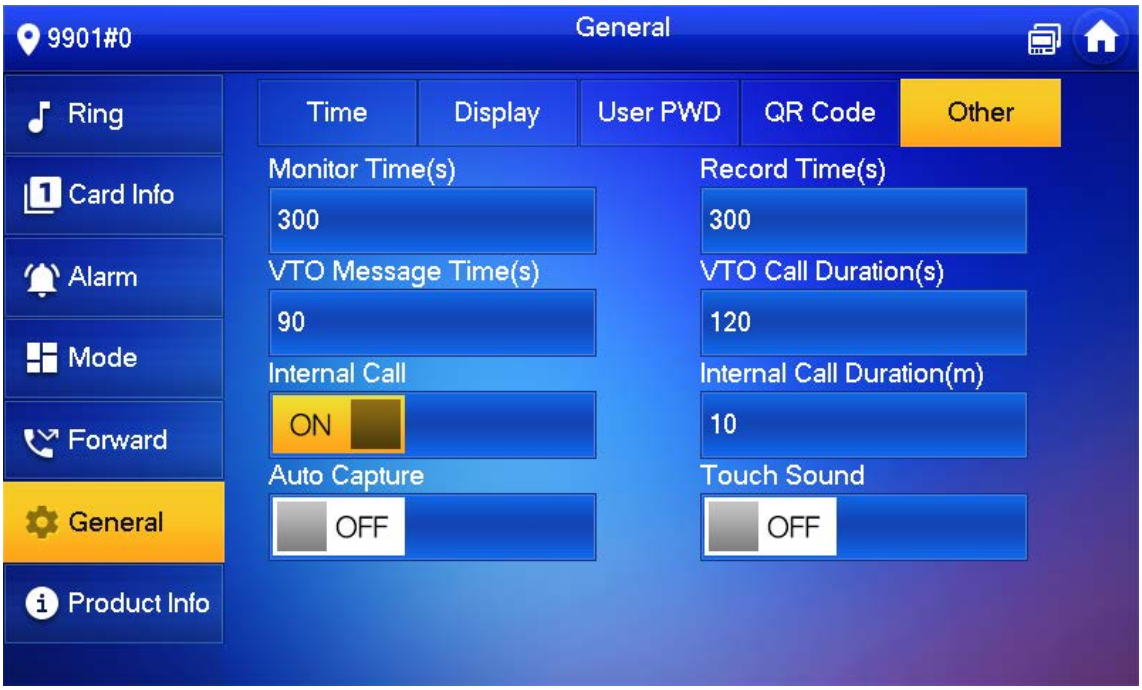
Step 1 Tap **Setting**.

Step 2 Enter login password and tap **OK**.

The default login password is 123456. Please refer to "4.6.6.3 Password Setting" for details.

Step 3 Select **General** > **Other**.

Figure 4-37 Other



Step 4 Configure parameters.

Table 4-8 Parameter description

Parameter	Description	Operation
Monitor Time	Maximum time to monitor VTO, IPC and fence station.	Tap + and − to set the time.
Record Time	Maximum recording time of videos during call, talk, monitoring and speaking. The system stops recording at the end of recording time.	
VTO Message Time	● When **VTO Message Time(s)** is not 0: ◇ If the VTH has an SD card and does not answer the VTO, it will enter message status according to prompt, and save the message in the SD card. ◇ If VTH does not have SD card, and the leave message upload function is not enabled on the VTO, the call will be hung up automatically if the VTH does not answer the VTO. ● When **VTO Message Time(s)** is 0: In any situation, the call will be hung up automatically if the VTH does not answer the VTO. ⚠ If VTO sets to forward the call to the management center, if VTH does not answer when VTO calls, and there is no message prompt, the call will be forwarded to the management center.	
Resident-to-resident Call Time	Maximum talk time between VTH and VTH.	
VTO Talk Time	Maximum talk time when VTO calls VTH.	

Parameter	Description	Operation
Resident-to-resident Call Enable	After resident-to-resident call is enabled, VTH can call another VTH. ⚠ The called party enables internal call, to realize this function.	Tap  to enable the function. The icon becomes  .
Auto Capture	After enabled, 3 pictures will be captured automatically when the VTO calls the VTH. Tap **Info > Record and Picture** to view them. ⚠ ● An SD card is needed for this function. ● After enabling auto capture, **Answer and Delete Snapshots** will be displayed, which when turned on, snapshots will be deleted if the VTH answers the call.	
Touch Ring	After enabling touch ring, there will be a ring when touching the screen.	

4.6.7 Product Information

Restart the system and format SD card.

⚠

If SD card is not inserted into the device, the SD format function is invalid.

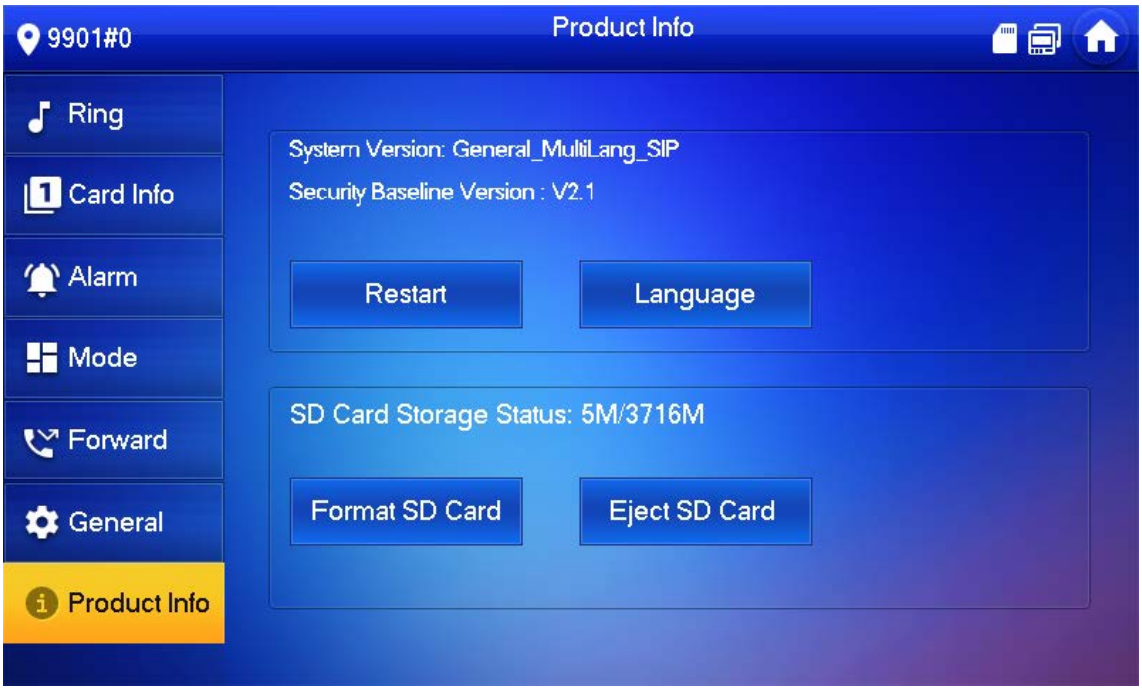
Step 1 Tap **Setting**.

Step 2 Enter login password and tap **OK**.

The default login password is 123456. Please refer to "4.6.6.3 Password Setting" for details.

Step 3 Tap **Product Info**.

Figure 4-38 Product information



- **Restart**: Restart the device.
- **Language**: Change the language of the device.
- **Format SD Card**: Clear all data in the SD card.

  ⚠

  Be careful with this operation.
- **Eject SD card**: Eject the SD card first to safely remove it.

4.7 Project Settings

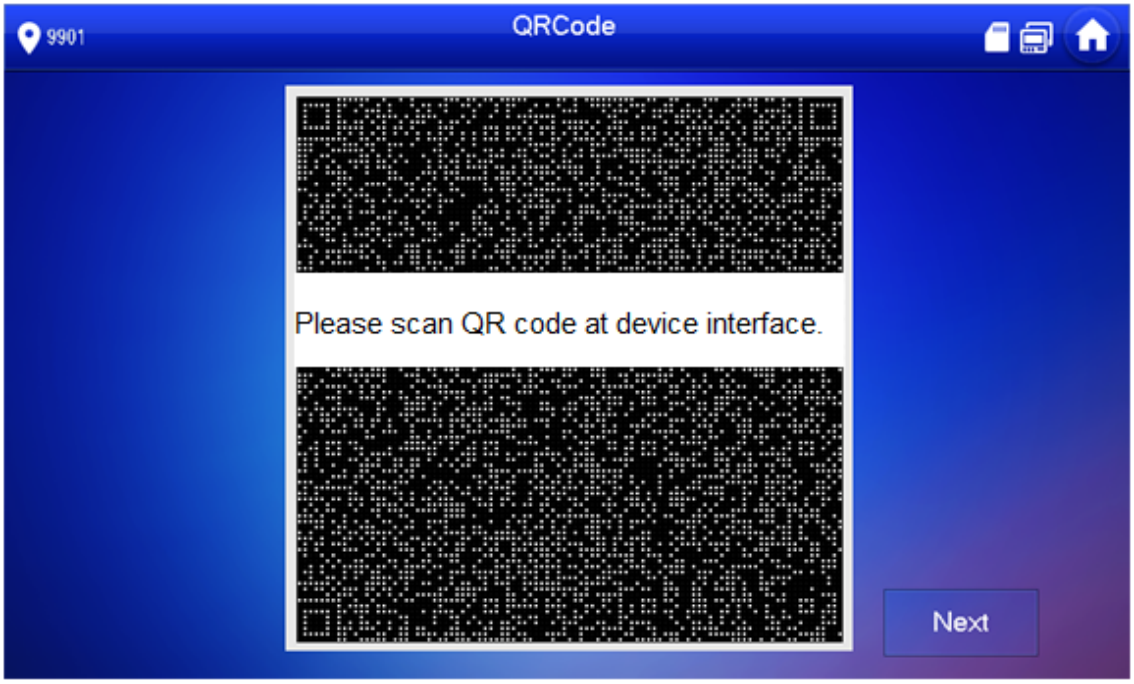
4.7.1 Forgetting Password

If you forget initialization password when entering project settings screen, reset password through Forget Password on the screen or in VDPconfig tool. Here takes how to reset password on the VTH as an example. If you want to know how to reset through VDPconfig tool, see the corresponding manual.

Step 1 Tap **Setting** for about 3 seconds.

Step 2 Tap **Forget Password**.

Figure 4-39 QR code



Step 3 Scan the QR code with any code-scanning APP, bind your email box, send it by email to the specified email address displayed on the screen, and thus obtain security code.

Step 4 Tap **Next**.

Step 5 Enter **Password**, **Confirm Password** and obtained **Security Code**.

Step 6 Tap **OK** to complete resetting the password.

4.7.2 Network Settings

See "3.1.2.2 Network Parameters".

4.7.3 VTH Configuration

See "3.1.2.3 VTH Config".

4.7.4 VTO Configuration

See "3.1.2.5 VTO Configuration".

4.7.5 Default

All parameters of the device will be restored to default values.

IP address and data in the SD card will not be restored. See Figure 4-38 to format the SD card.

Step 1 Tap **Setting** for about 3 seconds.

Step 2 Enter the password set during initialization, and tap **OK**.

Step 3 Tap **Default**.

Step 4 Tap **OK**.

The device restarts and proceeds to initialization.

4.7.6 Reset MSG

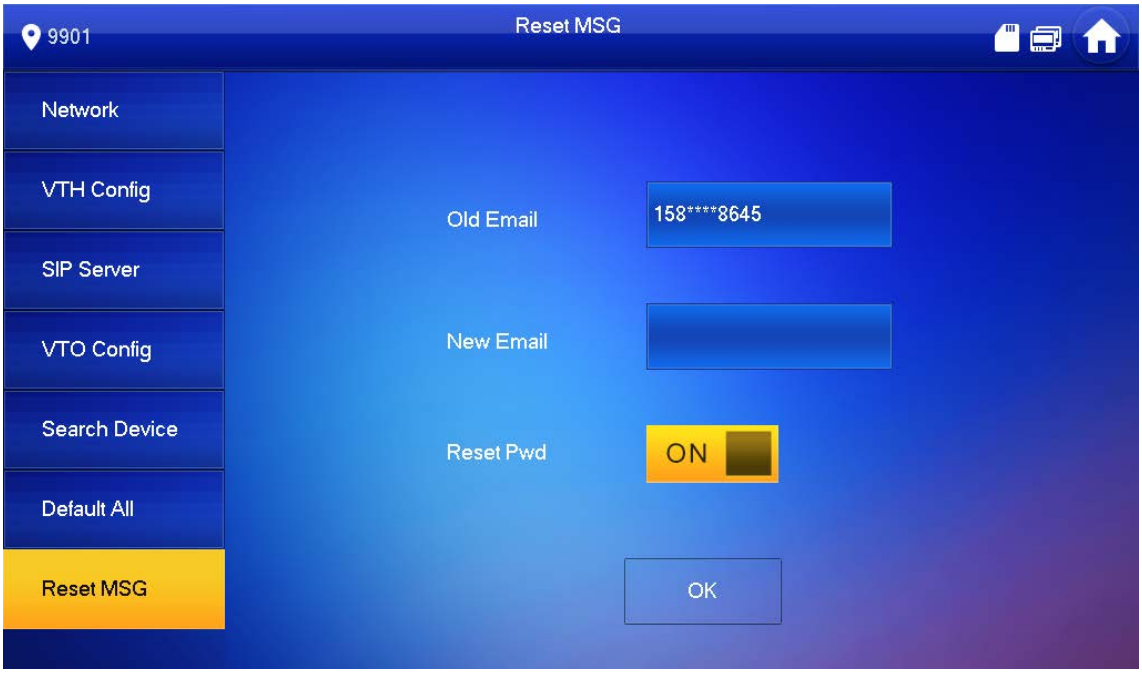
Modify the bonded Email.

Step 1 Tap **Setting** for about 3 seconds.

Step 2 Enter the password set during initialization, and tap **OK**.

Step 3 Tap **Reset MSG**.

Figure 4-40 Reset MSG



Step 4 Enter a new email address, turn on **Reset Pwd**, and then tap **OK**.

- The email will obtain security code during password resetting. See "4.7.1 Forget Password" for details.
- If **Reset Pwd** is turn off, you cannot reset the password.

4.8 Unlock Function

When the VTH is being called, during monitoring, talking and speaking, tap unlock button, and the VTO will be unlocked remotely.

4.9 Arm and Disarm Function

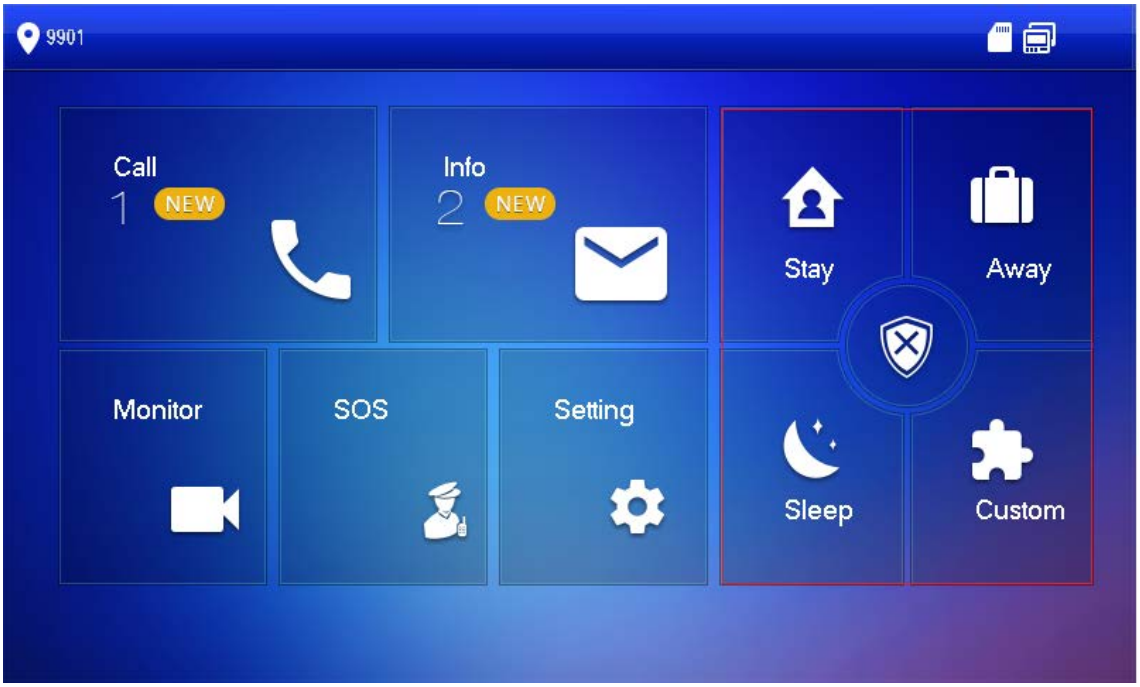
4.9.1 Arm

In case of triggering alarm after arm, produce linkage alarm and upload alarm information.

- Please make sure that the area has been added into arm mode. Otherwise, there will be no alarm triggering after arm.
- Please make sure that it is in the disarmed status. Otherwise, arm will fail.

Step 1 Tap on the Home screen.

Figure 4-41 Arm mode



Step 2 Select arm mode.

Step 3 Enter arm and disarm password; tap **OK**.

The device beeps continuously, which represents successful arm. The key displays corresponding arm mode.

- The default password of arm and disarm is 123456. Please refer to "4.6.6.3 Password Setting" for details.
- If delay alarm is set in the area, the device will beep continuously at the end of exit delay time.

4.9.2 Disarm

Please ensure that it is in armed status. Otherwise, disarm will fail.

Step 1 Tap disarm symbol at the lower right corner of the home screen.

Step 2 Enter arm and disarm password, and then tap **OK**.

- The default password of arm and disarm is 123456. Please refer to "4.6.6.3 Password Setting" for details.

- If you are forced to enter disarm password in case of emergencies, enter anti-hijacking password, which is the reversed arm password. The system will disarm, and at the same time, upload alarm info to management center/platform.

5 DSS Agile VDP

You can download DSS Agile VDP (hereinafter referred to as the "app") and link your VTH to the app to unlock the door, talk to connected VTO devices, call the management center, and view call records and messages.

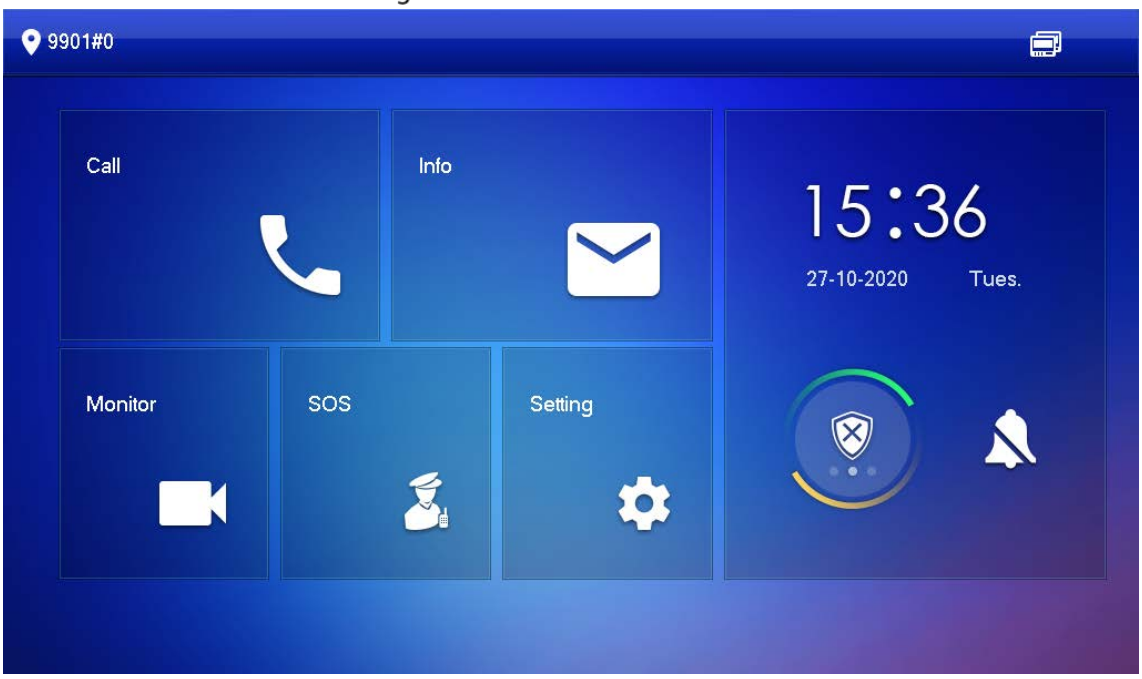
Screens and operations might vary between iOS and Android OS. This section takes Android OS as an example.

5.1 Downloading the App

Before you start, make sure the VTO, VTH, and DSS server are properly connected.

Step 1 On the VTH home screen, tap **Setting**.

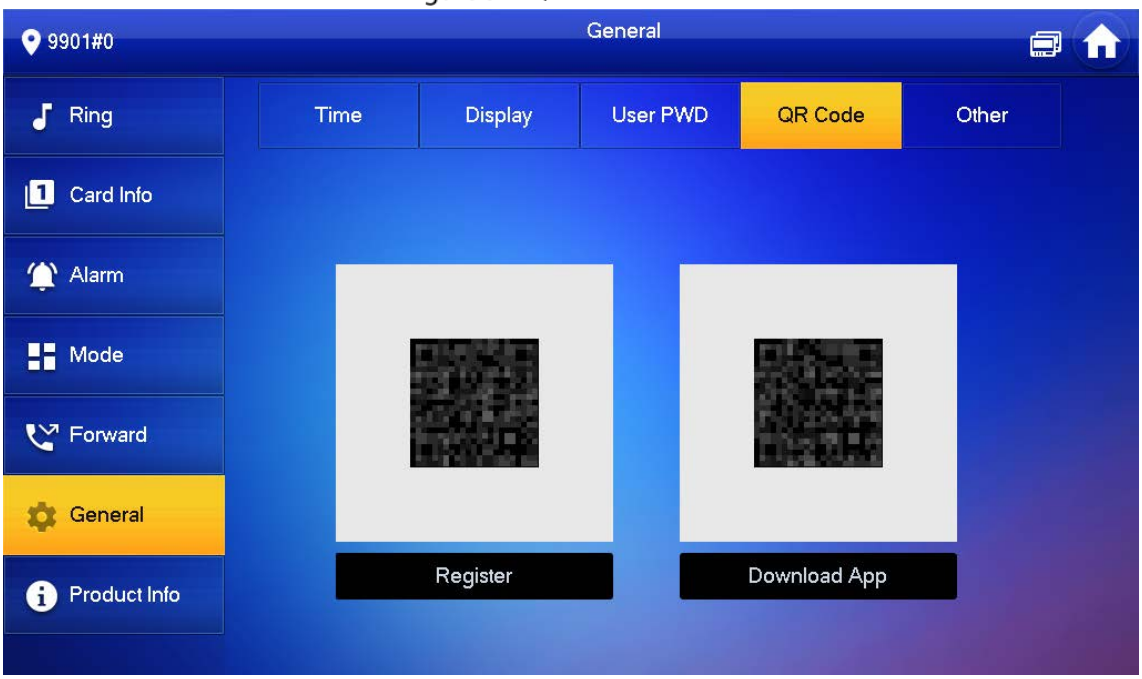
Figure 5-1 Home screen



Step 2 Enter the password you configured, and then select **General > QR Code**.

Step 3 Scan the **Download** QR code with your smartphone, and then download and install the app.

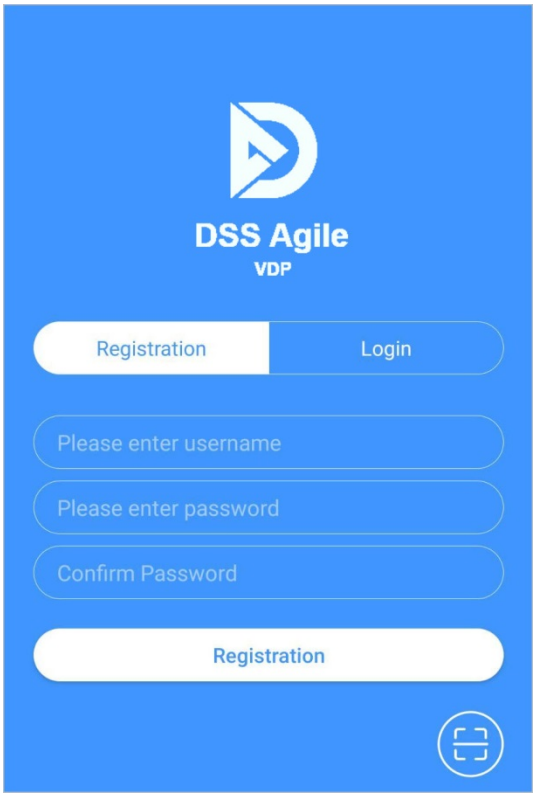
Figure 5-2 QR code



5.2 Registration and Login

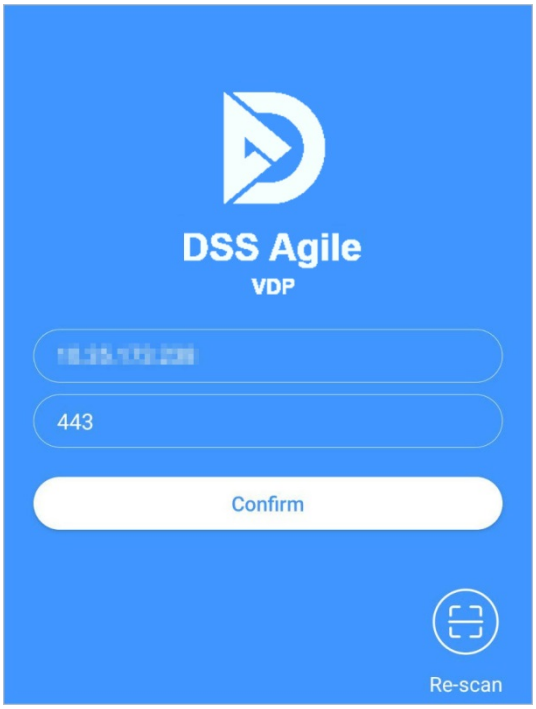
Step 1 Tap on your smartphone, read the **Software license agreement and Privacy policy**, and then tap **Agree** (only for first-time login).

Figure 5-3 Registration screen



Step 2 Tap , and then scan the **Register** code on the VTH. See Step 2 in "5.1 Downloading the App".

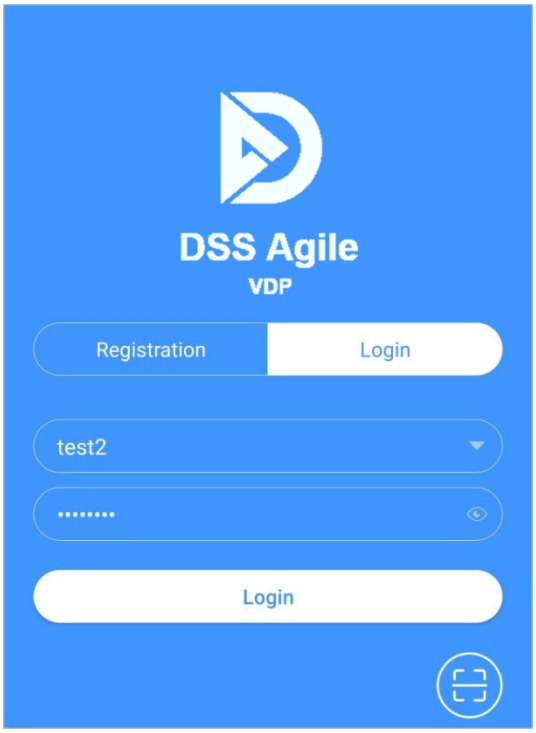
Figure 5-4 Confirm IP address and port number



Step 3 Verify the IP address and port number, and then tap **Confirm**.

Step 4 Enter the username and password, and then tap **Registration**. You can add 5 users to one VTH at most.

Figure 5-5 Login



Step 5 Tap the **Login tab**, enter the username and password you have set, and then tap **Login**.

5.3 Call Functions

You can receive the forwarded calls, remotely unlock the door, view live video of the VTO, and more.

To receive push notifications of call messages on the mobile phone, make sure that notifications of the app are enabled on your smartphone, and you are logged in to the app.

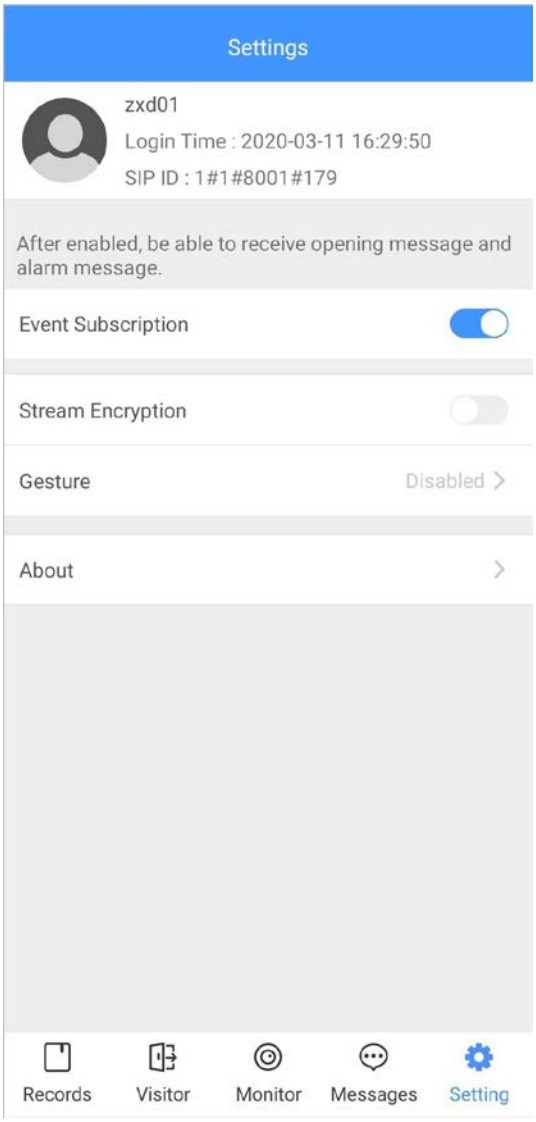
5.3.1 Forwarding Calls

Confirm your SIP ID, and then configure call forwarding on the VTH. If any device calls the VTH, you will receive the call on your smartphone.

Step 1 Log in to the app, and then tap **Setting**.

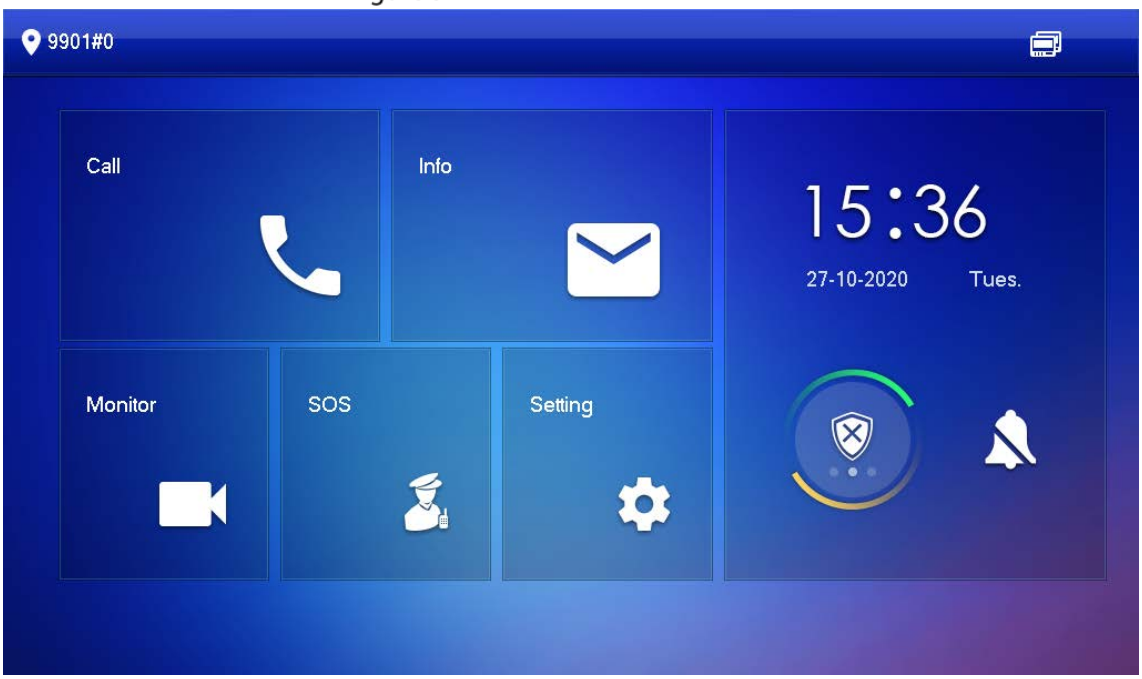
In the following example, the **SIP ID** is **1#1#8001#179**.

Figure 5-6 Settings



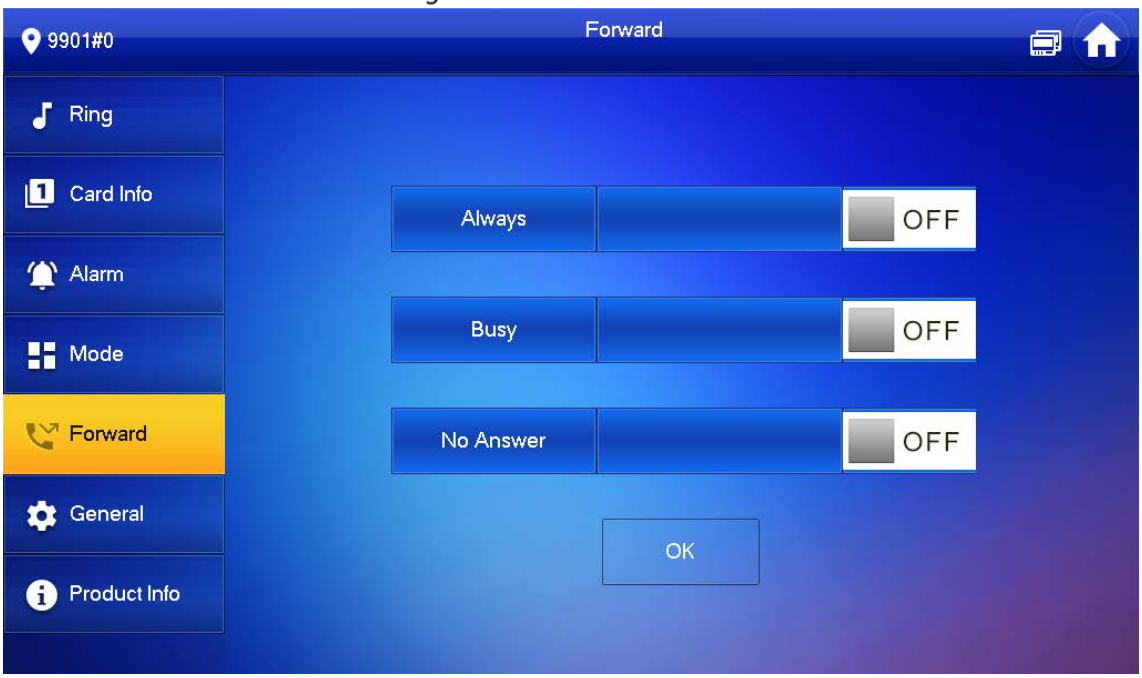
Step 2 On the VTH home screen, tap **Setting**.

Figure 5-7 VTH home screen



Step 3 Enter the password you configured, and then tap **Forward**.

Figure 5-8 Forward



Select forwarding type as needed:

- **Always**: All calls to this VTH will be forwarded.
- **Busy**: If the VTH is busy, the call will be forwarded.
- **No Answer**: Any call that is not answered within the defined ring time will be forwarded. See "4.6.1.4 Other Ring Settings" for details.

Step 4 Enter the SIP ID in the input box.

- Forward calls to a specific user: Enter the SIP ID of the user. For example, enter 1#1#8001#179 from Figure 5-6, and then calls will be forwarded to this user.
- Forward calls to every user: Change the last three numbers of the SIP ID to 100 (1#1#8001#100), and then all users linked to this VTH will receive the call on their smartphones at the same time.

Step 5 Tap 

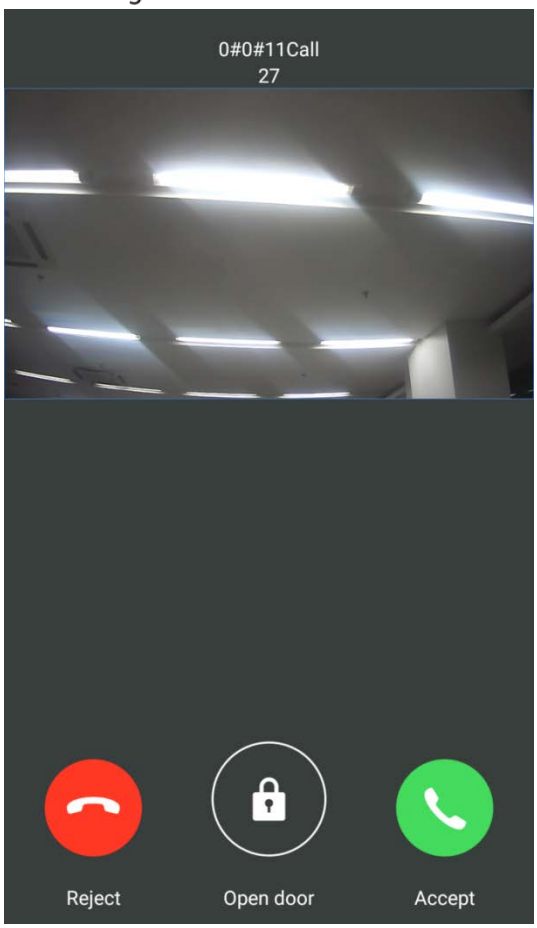
to enable the forwarding type you selected, and then tap **OK**.

5.3.2 Calling Operations

After call forwarding is configured, you can receive and answer phone calls from the VTO or the management center.

For example, when a VTO is calling, you can answer the call, view live video, and remotely unlock the door if the VTO is connected to a lock.

Figure 5-9 A call from a VTO

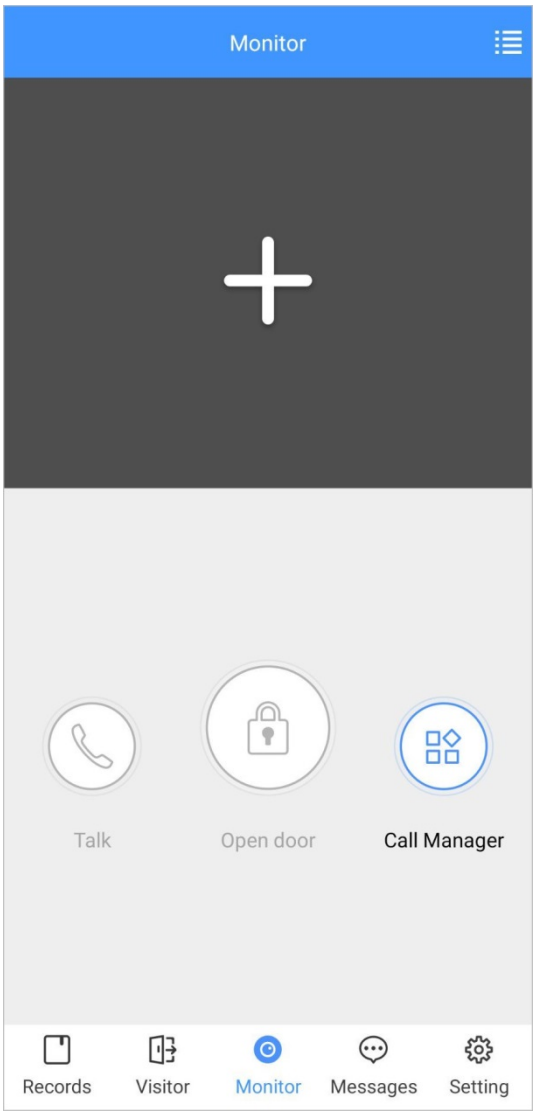


5.4 Monitoring

After a VTO is added, you can view its live video, have two-way audio talk, call management center, and remotely unlock the door.

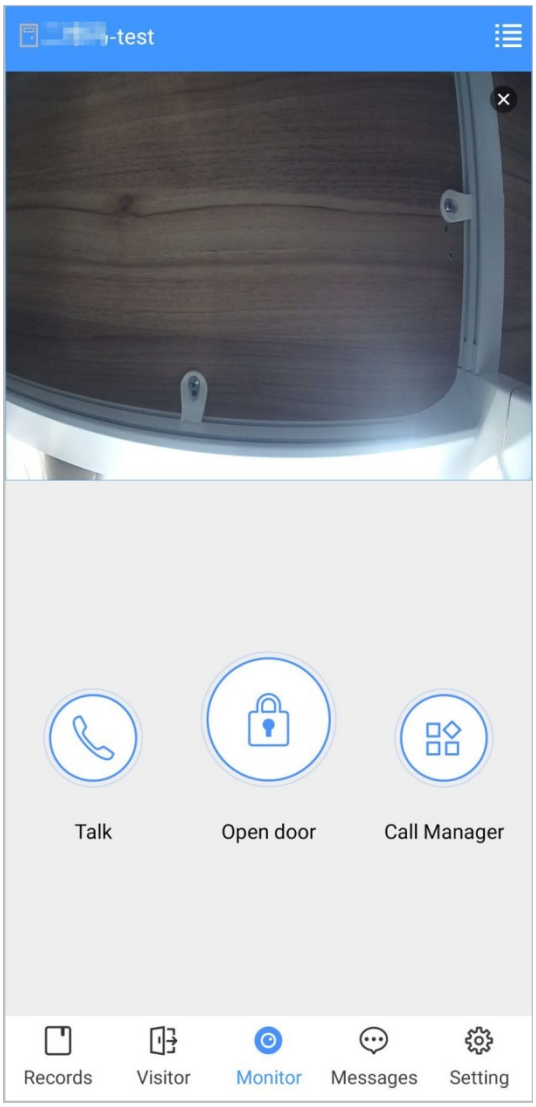
Step 1 Log in to the app, and then tap **Monitor**.

Figure 5-10 Monitor screen



Step 2 Tap , select the VTO from the channel list as needed.

Figure 5-11 Live video



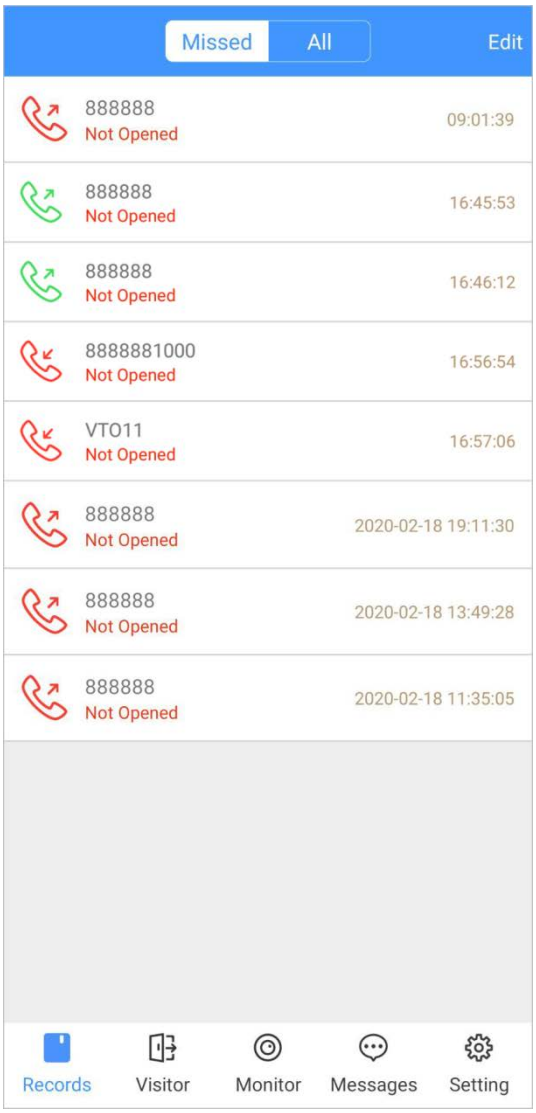
- : Switch to another VTO.
- : Unlock the door remotely.
- : Have a two-way audio talk with the VTO.
- : Call management center.

5.5 Call Records

View the incoming and outgoing call records.

Log in to the app, and then tap **Records**.

Figure 5-12 Call records



- Red phone icon: The call is missed or not answered.
- Green phone icon: The call is answered.
- **Not Opened/Opened**: Indicates whether the door is unlocked.
- **Edit**: Delete the record one by one, or select **Edit > Empty** to delete all records.

5.6 Message

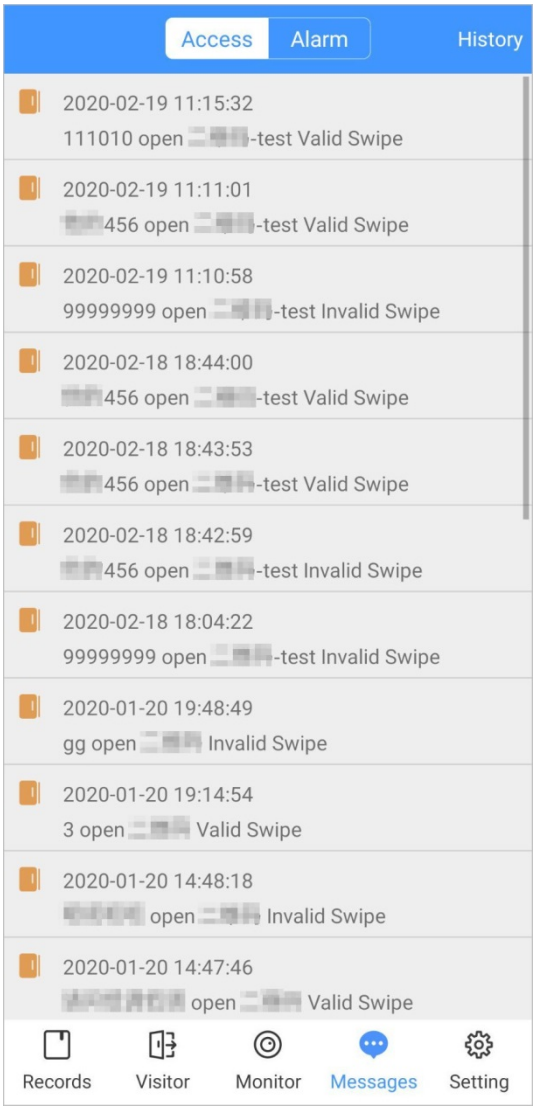
You can view the unlocking records and alarm messages, and search for history messages.

- You need to enable **Event Subscription** in **Setting** of the app first. See "5.7 Setting" for details.
- To receive messages on your smartphone, make sure that notifications of the app are enabled on your smartphone and the you are logged in to the app.

Viewing Messages

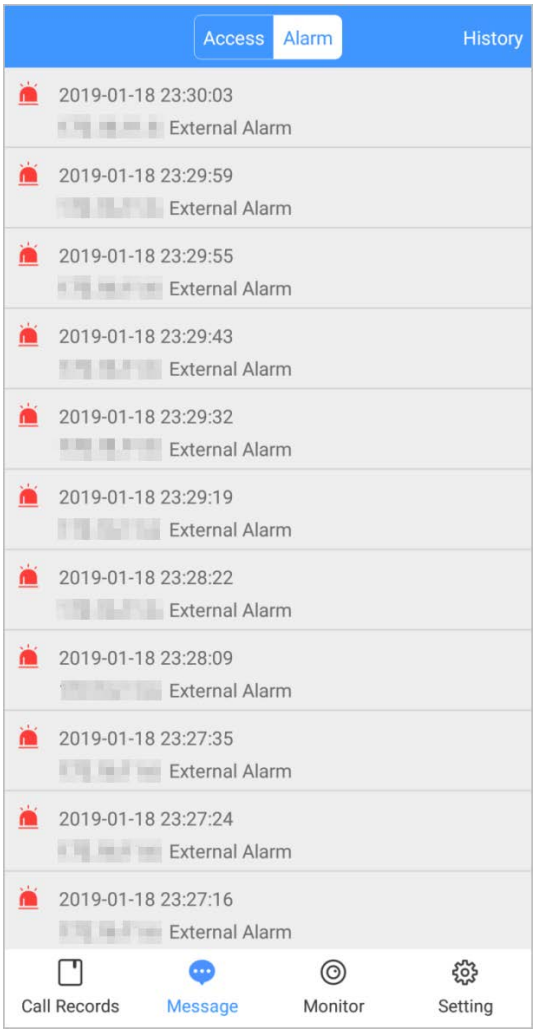
- Log in to the app, tap **Messages > Access**, and then you can view unlocking records, such as unlocking method, which user unlocked the door, and when the door is unlocked.

Figure 5-13 Access messages



- Log in to the app, tap **Messages > Alarm**, and then you can view alarm messages.

Figure 5-14 Alarm messages

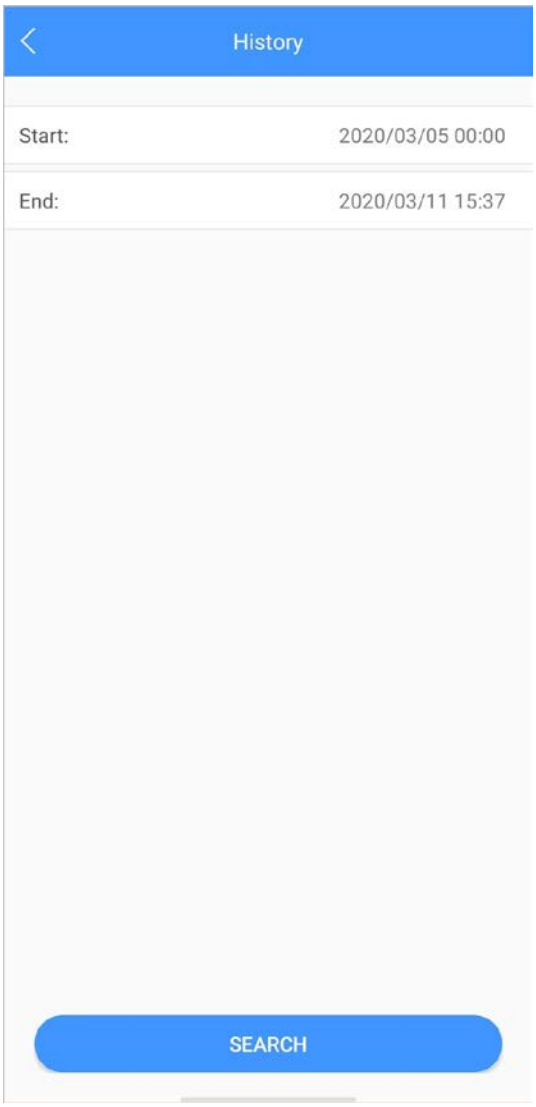


Searching for History Messages

Tap **History**, set the start and end time, and then tap **SEARCH**.

You search for messages within up to 7 days.

Figure 5-15 History messages



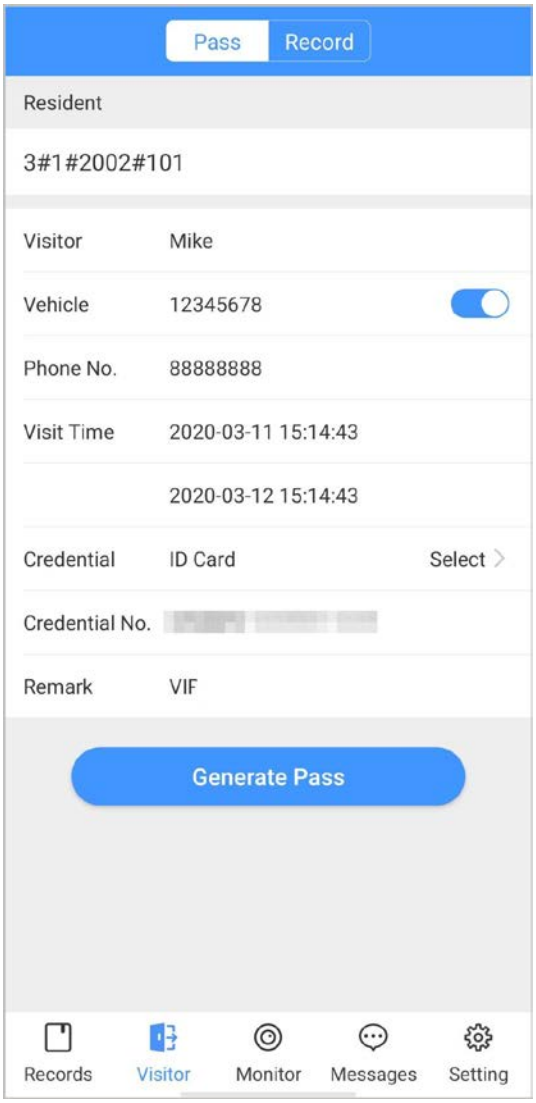
5.7 Visitor

You can create a pass for a visitor to have access permission. The pass is invalid after it is manually invalidated, the visiting period expires, or the visit is ended. You can also view visit records.

5.7.1 Creating Pass

Step 1 Log in to the aPP, and then tap **Visitor**.

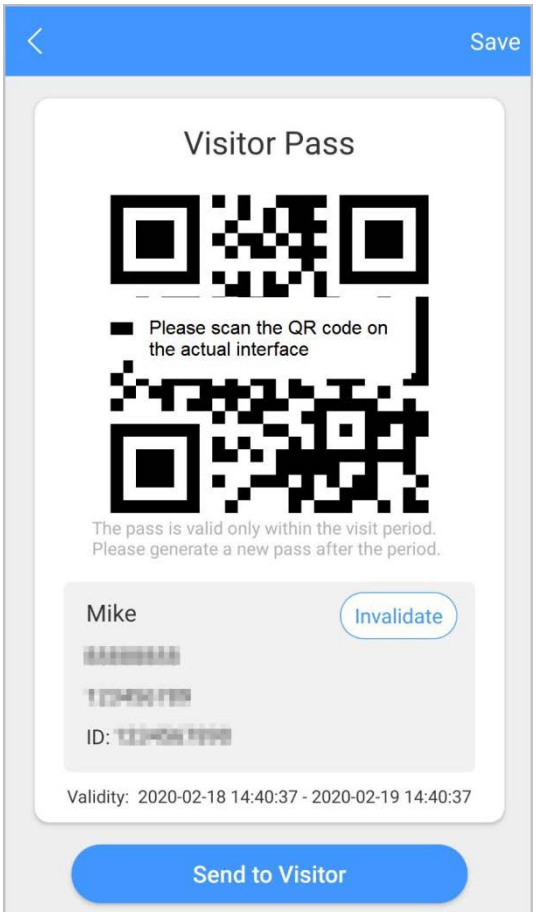
Figure 5-16 Visitor information



Step 2 Enter the information of the visitor, and then tap **Generate Pass**.

Each visitor can only register one plate number.

Figure 5-17 Visitor pass



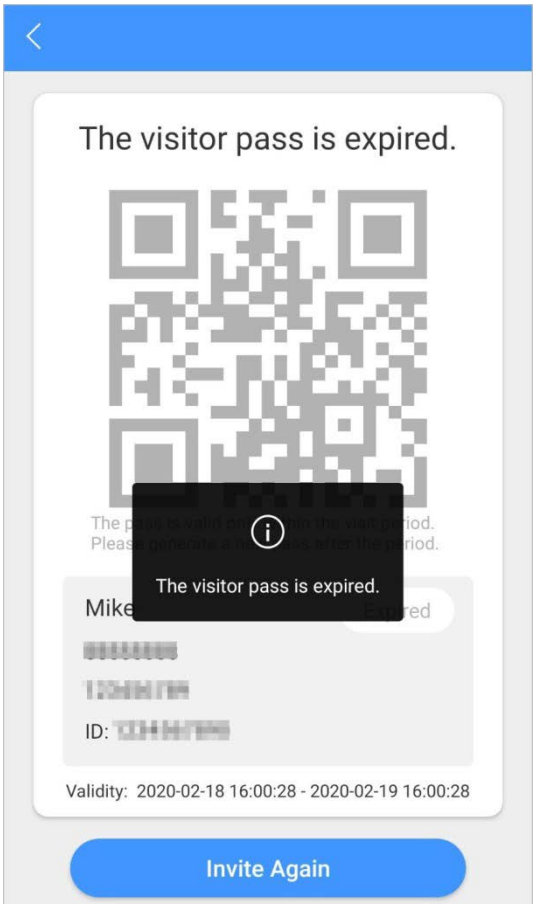
Step 3 Tap **Send to Visitor** to send the QR code to the visitor.

Tap **Save** to save the QR code to your smartphone.

Step 4 (Optional) Tap **Invalidate** to cancel the appointment, and then the QR code will not have access permissions.

Tap **Invite Again** to generate a new pass for the visitor.

Figure 5-18 Invalidate the pass

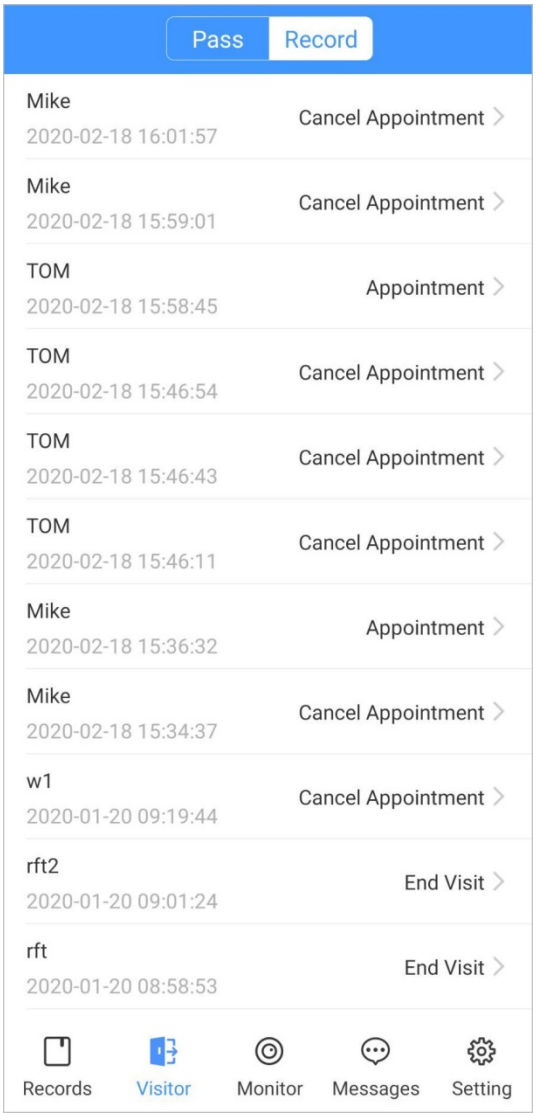


5.7.2 Visiting Records

You can view visitor status such as having an appointment, on a visit, ending the visit, and cancelling the appointment. You can also view and modify the pass.

- View visitor status: Log in to the app, tap **Visitor > Record**.
- View and modify a pass: Tap a visitor in the list, and then you can view detailed information of the pass, invalidate the appointment, invite the visitor again, and more. For details, see "5.7.1 Creating Pass".

Figure 5-19 Visitor records

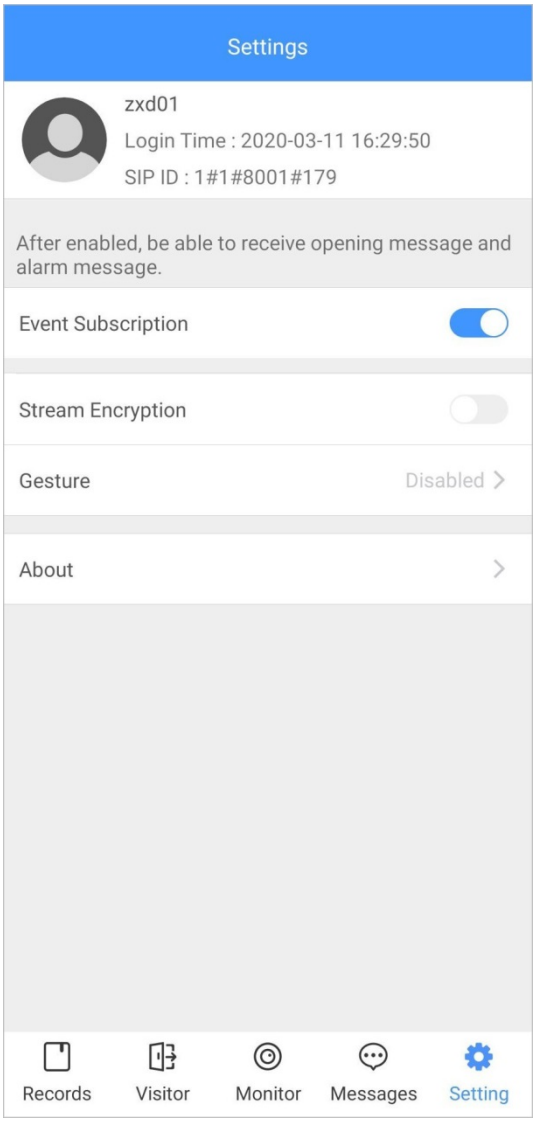


5.8 Setting

You can view SIP ID, and enable message subscription, stream encryption, message sound, login by pattern, and more.

Log in to the app, and then tap **Setting**.

Figure 5-20 Setting



- **Event Subscription**: Enable it, and then you can receive unlocking messages and alarm messages. See "5.6 Message" for details.
- **Stream Encryption**: Enable it to enhance security, but stream acquisition speed might slow down.
- **Gesture**: Draw a pattern, and then you can log in by that pattern.
- **About**: View app version, software license and privacy policy, help document, or log out of the current account.

Appendix 1 Cybersecurity Recommendations

Mandatory actions to be taken for basic device network security:

1. **Use Strong Passwords**

   Please refer to the following suggestions to set passwords:

   - The length should not be less than 8 characters;
   - Include at least two types of characters; character types include upper and lower case letters, numbers and symbols;
   - Do not contain the account name or the account name in reverse order;
   - Do not use continuous characters, such as 123, abc, etc.;
   - Do not use overlapped characters, such as 111, aaa, etc.;

2. **Update Firmware and Client Software in Time**

   - According to the standard procedure in Tech-industry, we recommend to keep your device (such as NVR, DVR, IP camera, etc.) firmware up-to-date to ensure the system is equipped with the latest security patches and fixes. When the device is connected to the public network, it is recommended to enable the auto-check for updates function to obtain timely information of firmware updates released by the manufacturer.
   - We suggest that you download and use the latest version of client software.

Nice to have recommendations to improve your device network security:

1. **Physical Protection**

   We suggest that you perform physical protection to device, especially storage devices. For example, place the device in a special computer room and cabinet, and implement well-done access control permission and key management to prevent unauthorized personnel from carrying out physical contacts such as damaging hardware, unauthorized connection of removable device (such as USB flash disk, serial port), etc.

2. **Change Passwords Regularly**

   We suggest that you change passwords regularly to reduce the risk of being guessed or cracked.

3. **Set and Update Passwords Reset Information Timely**

   The device supports password reset function. Please set up related information for password reset in time, including the end user's mailbox and password protection questions. If the information changes, please modify it in time. When setting password protection questions, it is suggested not to use those that can be easily guessed.

4. **Enable Account Lock**

   The account lock feature is enabled by default, and we recommend you to keep it on to guarantee the account security. If an attacker attempts to log in with the wrong password several times, the corresponding account and the source IP address will be locked.

5. **Change Default HTTP and Other Service Ports**

   We suggest you to change default HTTP and other service ports into any set of numbers between 1024~65535, reducing the risk of outsiders being able to guess which ports you are using.

6. **Enable HTTPS**

   We suggest you to enable HTTPS, so that you visit Web service through a secure communication channel.

7. **MAC Address Binding**

   We recommend you to bind the IP and MAC address of the gateway to the device, thus reducing the risk of ARP spoofing.

8. **Assign Accounts and Privileges Reasonably**

   According to business and management requirements, reasonably add users and assign a minimum set of permissions to them.

9. **Disable Unnecessary Services and Choose Secure Modes**

   If not needed, it is recommended to turn off some services such as SNMP, SMTP, UPnP, etc., to reduce risks.

   If necessary, it is highly recommended that you use safe modes, including but not limited to the following services:

   - SNMP: Choose SNMP v3, and set up strong encryption passwords and authentication passwords.
   - SMTP: Choose TLS to access mailbox server.
   - FTP: Choose SFTP, and set up strong passwords.
   - AP hotspot: Choose WPA2-PSK encryption mode, and set up strong passwords.

10. **Audio and Video Encrypted Transmission**

    If your audio and video data contents are very important or sensitive, we recommend that you use encrypted transmission function, to reduce the risk of audio and video data being stolen during transmission.

    Reminder: encrypted transmission will cause some loss in transmission efficiency.

11. **Secure Auditing**

    - Check online users: we suggest that you check online users regularly to see if the device is logged in without authorization.
    - Check device log: By viewing the logs, you can know the IP addresses that were used to log in to your devices and their key operations.

12. **Network Log**

    Due to the limited storage capacity of the device, the stored log is limited. If you need to save the log for a long time, it is recommended that you enable the network log function to ensure that the critical logs are synchronized to the network log server for tracing.

13. **Construct a Safe Network Environment**

    In order to better ensure the safety of device and reduce potential cyber risks, we recommend:

    - Disable the port mapping function of the router to avoid direct access to the intranet devices from external network.
    - The network should be partitioned and isolated according to the actual network needs. If there are no communication requirements between two sub networks, it is suggested to use VLAN, network GAP and other technologies to partition the network, so as to achieve the network isolation effect.
    - Establish the 802.1x access authentication system to reduce the risk of unauthorized access to private networks.
    - Enable IP/MAC address filtering function to limit the range of hosts allowed to access the device.
