

# Al Digital Video Recorder

User's Manual

ZHEJIANG DAHUA VISION TECHNOLOGY CO., LTD.

# Foreword

### General

This user's manual (hereinafter referred to be "the Manual") introduces the functions and operations of the DVR devices (hereinafter referred to as "the Device").

#### Safety Instructions

The following signal words might appear in the manual.

Signal Words	Meaning
	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.
	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
	Indicates a potential risk which, if not avoided, could result in property damage, data loss, lower performance, or unpredictable result.
© <u>—</u> ™ TIPS	Provides methods to help you solve a problem or save you time.
	Provides additional information as the emphasis and supplement to the text.

#### **Revision History**

Version	Revision Content	Release Time	
V1.2.1	<ul> <li>Updated AI mode switch.</li> <li>Added intelligent diagnosis.</li> <li>Updated alarm-in port settings.</li> <li>Updated password resetting.</li> </ul>	December 2021	
V1.2.0	Added some models. October 2021		
V1.1.0	Added DH-XVR4232AN-I.	July 2021	
V1.0.11	Added DH-XVR5816S-4KL-I2-LP and DH- XVR7816S-4KL-X-LP-V2. May 2021		
V1.0.10	Deleted the video quality analytics function. April 2021		
V1.0.9	Added some models.	February 2021	

Version	Revision Content	Release Time	
V1.0.8	Added some models. November 2020		
V1.0.7	Added some models. September 2020		
V1.0.6	Added some models. May 2020		
V1.0.5	Updated to 4.0 UI version. February 2020		
V1.0.4	Added disarm function, HDD database function, and SMD preview function. Optimizes Smart Search function, available to filtering human and vehicle.	September 2019	
V1.0.0	First release. October 2018		

#### Privacy Protection Notice

As the device user or data controller, you might collect the personal data of others such as their face, fingerprints, and license plate number. You need to be in compliance with your local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures which include but are not limited: Providing clear and visible identification to inform people of the existence of the surveillance area and provide required contact information.

#### About the Manual

- The manual is for reference only. Slight differences might be found between the manual and the product.
- We are not liable for losses incurred due to operating the product in ways that are not in compliance with the manual.
- The manual will be updated according to the latest laws and regulations of related jurisdictions. For detailed information, see the paper user's manual, use our CD-ROM, scan the QR code or visit our official website. The manual is for reference only. Slight differences might be found between the electronic version and the paper version.
- All designs and software are subject to change without prior written notice. Product updates might result in some differences appearing between the actual product and the manual. Please contact customer service for the latest program and supplementary documentation.
- There might be errors in the print or deviations in the description of the functions, operations and technical data. If there is any doubt or dispute, we reserve the right of final explanation.
- Upgrade the reader software or try other mainstream reader software if the manual (in PDF format) cannot be opened.
- All trademarks, registered trademarks and company names in the manual are properties of their respective owners.
- Please visit our website, contact the supplier or customer service if any problems occur while using the device.
- If there is any uncertainty or controversy, we reserve the right of final explanation.

# Important Safeguards and Warnings

This chapter describes the contents covering proper handling of the Device, hazard prevention, and prevention of property damage. Read these contents carefully before using the Device, comply with them when using, and keep it well for future reference.

#### **Operation Requirements**

- Do not place or install the Device in a place exposed to sunlight or near the heat source.
- Keep the Device away from dampness, dust or soot.
- Keep the Device installed horizontally on the stable place to prevent it from falling.
- Wall-mounting is not supported.
- Do not drop or splash liquid onto the Device, and make sure there is no object filled with liquid on the Device to prevent liquid from flowing into the Device.
- Install the Device in a well-ventilated place, and do not block the ventilation of the Device.
- Operate the device within the rated range of power input and output.
- Do not dissemble the Device.
- Transport, use and store the Device under the allowed humidity and temperature conditions.

#### Electrical Safety

- Use the battery of specified manufacturer; otherwise there might result in explosion. When replacing battery, make sure the same type is used. Improper battery use might result in fire, explosion, or inflammation.
- Follow the instructions to dispose of the used battery.
- Use the recommended power cables in the region and conform to the rated power specification.
- Use the power adapter provided with the Device, or adapter meets the LPS standard; otherwise, it might result in people injury and device damage.
- The power supply must conform to the requirements of ES1 in IEC 62368-1 standard and be no higher than PS2. Note that the power supply requirements are subject to the device label.
- Connect the device (I-type structure) to the power socket with protective earthing.
- The appliance coupler is a disconnection device. When using the coupler, keep the angle for easy operation.

# 1 Introduction

## 1.1 Overview

The Device is an excellent digital monitor product for security industry. The embedded LINUX OS assures the stable operation. The H.265 and G.711 technologies assure the high quality image and low bit stream. The frame-by-frame play function displays more details for analysis, and provides the functions such as record, playback, and monitor and assures the synchronization for audio and video. The Device also adopts the advanced control technology and great network data transmission capability.

The Device adopts embedded design to achieve high security and reliability. It can work in the local end and, with strong networking capability it can get connected to the professional surveillance software (Smart PSS) to form a security network to show its powerful remote monitoring function.

The Device is applicable to the areas such as bank, telecom, electricity, traffic, intelligent residential district, factory, warehouse, resources, and water conservancy facilities.

# 1.2 Functions

#### 

The functions might be different depending on the software and hardware versions of the model you purchased.

#### **Al Function**

- Support face detection that analyzes the attributes such as age, gender, glasses, beard, mask, and then make structured of these data to store for quick search.
- Support face recognition that compares the captured face snapshot with the face database and link the configured alarms (face detection should be enabled).
- Support searching by picture that is convenient for finding the target picture from database.
- Support 16 channel IVS function that includes tripwire and intrusion detection. The IVS function can avoid wrong alarms by filtering the factors such as rains, light, and animals.
- Calculate the quantity of detected humans within 24 hours.
- Detect the vehicles passing by within 24 hours.

#### Real-time Surveillance

- Support VGA port and HDMI port to realize the surveillance through monitors.
- Support HDMI, VGA, and TV output at the same time.

#### IoT Management

Provide specific management module for IoT features including humidity and temperature data reports and alarms linkage.

#### **Sensor Integration**

Integrate coaxial cameras with diverse array of sensors such as temperature, humidity and wireless alarm devices.

#### Storage Management

- Special data format to guarantee data security and avoid the risk of modifying data viciously.
- Support digital watermark.

#### **Compression Format**

Support multiple-channel audio and video signal. An independent hardware decodes the audio and video signal from each channel to maintain video and audio synchronization.

#### **Backup Function**

- Support backup operation through USB port (such as USB storage disk, portable HDD, and burner).
- Client-end user can download the file from local HDD through network to backup.

#### **Record & Playback**

- Support each channel real-time record independently, and simultaneously support the functions such as search, backward play, network monitor, record search, and download.
- Support various playback modes: slow play, fast play, backward play and frame by frame play.
- Support time title overlay so that you can view event accurate occurred time.
- Support zooming in the selected area in the live view.

#### **Network Operation**

Support network remote real-time monitor, remote record search and remote PTZ control.

#### Alarm Activation

- Several relay alarm outputs to realize alarm activation and on-site light control.
- The alarm input port and output port have the protection circuit to guarantee the Device safety.

#### **Communication Port**

- RS-485 port can realize alarm input and PTZ control.
- RS-232 port can connect to keyboard, COM port of PC or the matrix control.
- Standard Ethernet port can realize network remote access function.
- The dual-network port has the multi-address, fault tolerance, load balance setup mode.

#### PTZ Control

Support PTZ decoder through RS-485 port.

#### Intelligent Operation

- Support mouse operation function.
- Support "copy and paste" function for the same settings.

#### UPnP (Universal Plug and Play)

Establish mapping connection between LAN and WAN through UPnP protocol.

#### **Camera Self-adaptive**

Auto-recognize and work with the PAL or NTSC camera and HD camera.

# 2 Getting Started

# 2.1 Checking the Components

#### 

The actual appearance, component, or quantity might be different depending on the model you purchased.

When you receive the Device, check against the following checking list. If any of the items are missing or damaged, contact the local retailer or after-sales engineer immediately.

No.	Checking Items		Requirements
1	Package	Appearance	No obvious damage.
		Packing materials	No broken or distorted positions that could be caused by hit.
2	Labels	Labels on the device	Not torn up. Do not tear up or throw away the labels; otherwise the warranty services are not ensured. You need to provide the serial number of the product when you call the after-sales service.
		Appearance	No obvious damage.
3	Device	Data cables, power cables, fan cables, mainboard	No connection loose.

# 2.2 Installing HDD

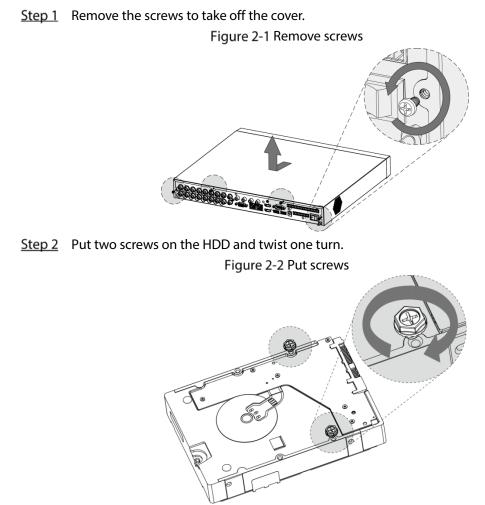

Check whether the HDD is already installed in the Device when you first time using the Device. We recommend you to use the HDD recommended officially. Do not use the PC HDD.

### $\wedge$

Shut down the device and then unplug the power cable before you open the case to replace the HDD.

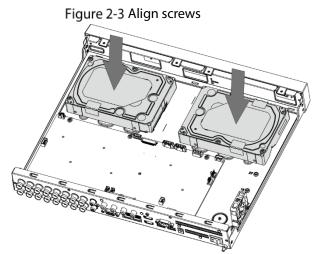

2.2.1 DH-XVR42xxAN-I/DH-XVR52xxAN-I2/DH-XVR52xxA-I2/DH-XVR52xxAN-4KL-I2/DH-XVR52xxA-4KL-I2/DH-XVR52xxAN-I3/DH-XVR52xxA-I3/DH-XVR52xxAN-4KL-I3/DH-XVR52xxA-4KL-I3/DH-XVR7208A-4KL-I/DH-XVR7216A-4KL-I/DH-XVR72xxA-4K-I2/DH-XVR7216AN-4K-I2/DH-XVR8216A-4KL-I/DH-XVR8208A-4K-I/DH-XVR8208A-4KL-I

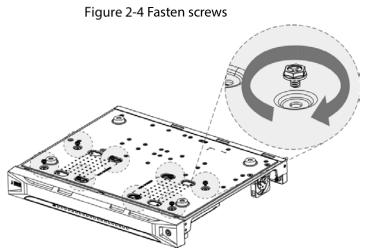

<u>Step 3</u> Align the two screws with the holes on the device.

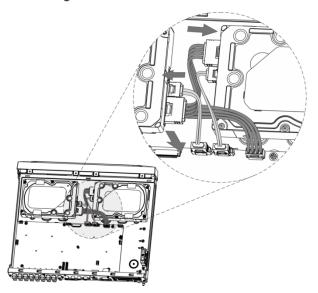

<u>Step 4</u> Turn the device and put in the other two screws, and then fasten all screws to fix the HDD to the device.

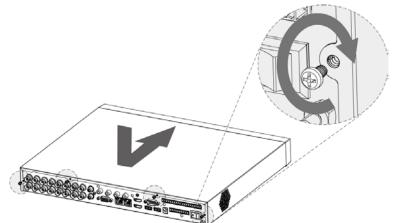

<u>Step 5</u> Use power cable and data cable to connect the device and HDD. Figure 2-5 Connect cables

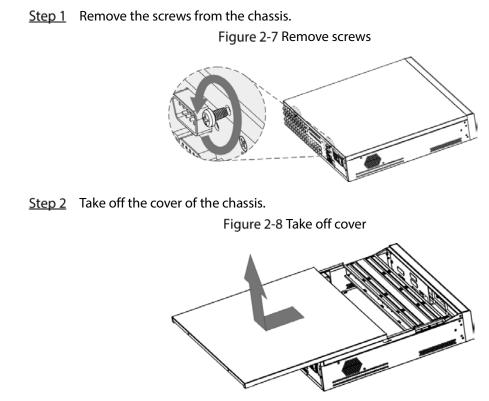

<u>Step 6</u> Put back the cover and fasten the screws.

#### Figure 2-6 Put back cover

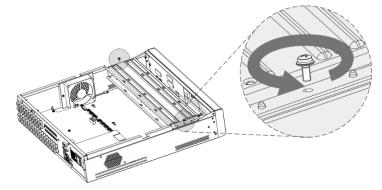

# 2.2.2 DH-XVR8816S-4KL-I/DH-XVR5808S-I2/DH-XVR5816S-I2/DH-XVR5832S-I2/DH-XVR5816S-4KL-I2/DH-XVR5832S-4KL-I2/DH-XVR7808S-4K-I2/DH-XVR7816S-4K-I2/DH-XVR5816S-4KL-I2-LP/DH-XVR7816S-4KL-X-LP-V2

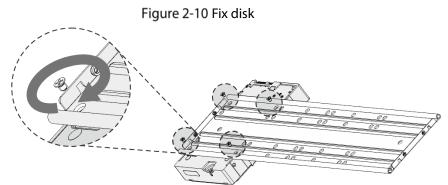

<u>Step 3</u> Remove the screws from the drive bracket to take it off.

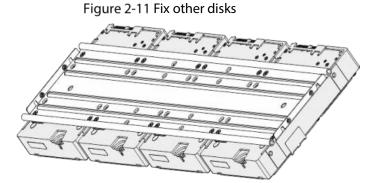

#### Figure 2-9 Take off drive bracket

<u>Step 4</u> Align the four screw holes on the disk to those on the drive bracket and fix the disk on the bracket.

<u>Step 6</u> Fix the two drive brackets.

#### $\square$

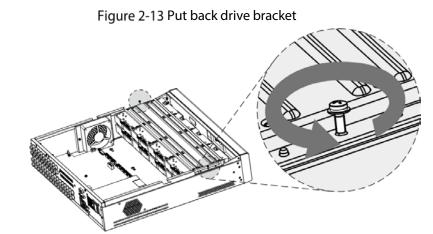

This is only needed on models with 8 bays.

Figure 2-12 Fix drive brackets

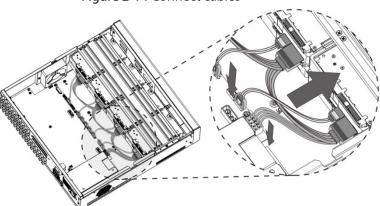

<u>Step 7</u> Put the drive brackets back and fix them in the DVR.

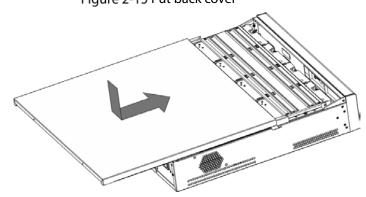

Step 8 Connect the disks and the DVR with power cable and data cable.

The following figure shows the connection of 4-bay model for example. Figure 2-14 Connect cables

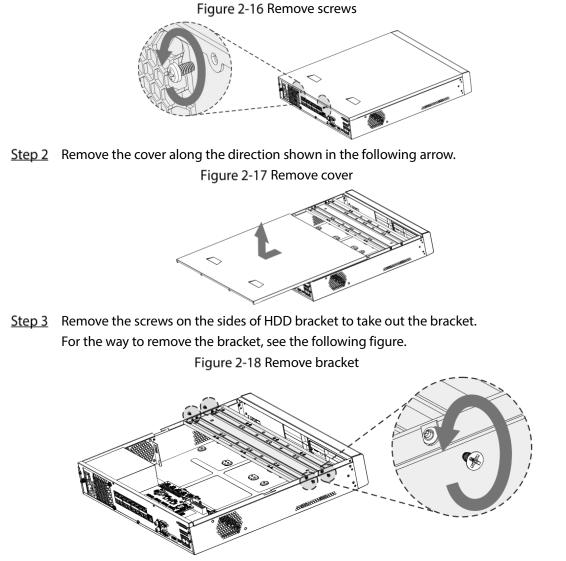

<u>Step 9</u> Put the cover back and fasten the screws. Figure 2-15 Put back cover

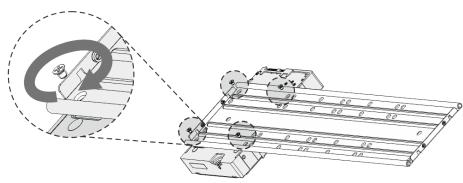

2.2.3 DH-XVR5408L-I2/DH-XVR5416L-I2/DH-XVR5432L-I2/DH-XVR5416L-4KL-I2/DH-XVR5432L-4KL-I2/DH-XVR7408L-4K-I2/DH-XVR7416L-4K-I2

<u>Step 1</u> Remove the fixing screws from the rear panel.

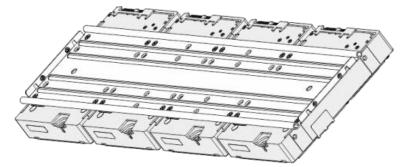

<u>Step 4</u> Match the four screw holes on the HDD with the four holes on the bracket and then fasten the screws. The HDD is fixed to the bracket.

Figure 2-19 Fix HDD

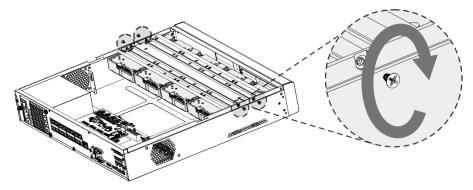

<u>Step 5</u> Install the other HDDs.

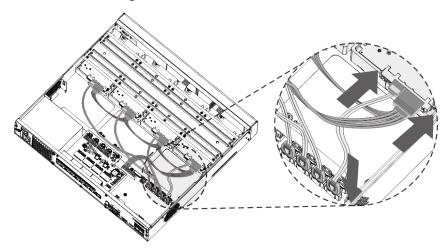

Figure 2-20 Install other HDDs

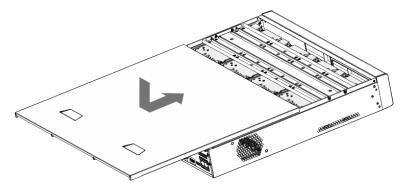

<u>Step 6</u> Place the bracket to the device and then fasten the screws on the sides of the bracket. Figure 2-21 Fasten screws

<u>Step 7</u> Connect the HDD data cable and power cable to the device. Figure 2-22 Connect cables

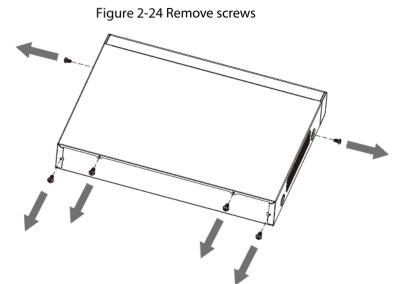

<u>Step 8</u> Put back the cover and fasten the screws on the rear panel to complete the installation. Figure 2-23 Put back cover

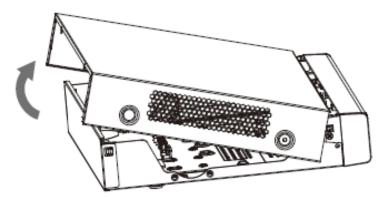

2.2.4 DH-XVR1B08-I/DH-XVR1B08H-I/DH-XVR1B04-I/DH-XVR1B04H-I/DH-XVR1B16-I/DH-XVR1B16H-I/DH-XVR4104HS-I/DH-XVR4108HS-I/DH-XVR4104C-I/DH-XVR4108C-I/DH-XVR4116HS-I/DH-XVR5104H-I/DH-XVR5108H-I/DH-XVR5116H-I/DH-XVR51xxHS-I2/DH-XVR51xxH-I2/DH-XVR5108H-I/DH-XVR5116H-I/DH-XVR51xxHS-I2/DH-XVR51xxH-I2/DH-XVR51xxHE-I2/DH-XVR51xxHS-4KL-I2/DH-XVR51xxH-4KL-I2/DH-XVR51xxHE-4KL-I2/DH-XVR51xxHS-4KL-I3/DH-XVR51xxH-4KL-XVR51xxHE-I3/DH-XVR51xxHS-4KL-I3/DH-XVR51xxH-4KL-I3/DH-XVR51xxHE-4KL-I3/DH-XVR71xxHE-4KL-I/DH-XVR71xxH-4K-I2/DH-XVR51xxHE-4KL-I3/DH-XVR71xxHE-4KL-I/DH-XVR71xxH-4K-I2/DH-

<u>Step 2</u> Remove the cover.

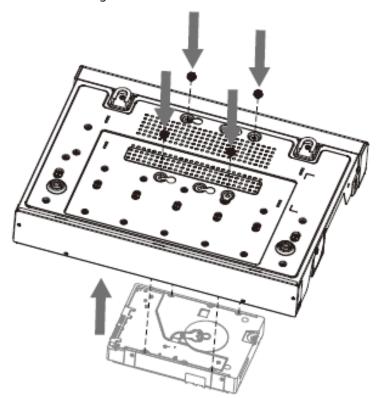

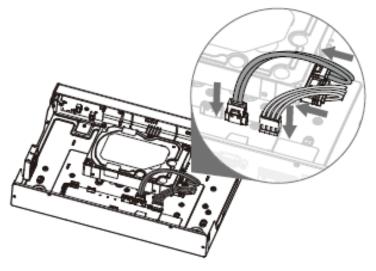

<u>Step 3</u> Align the screws of the HDD with the holes on the back of the device and fasten them.

Figure 2-26 Fasten screws

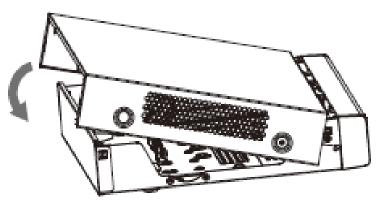

<u>Step 4</u> Connect the HDD cable and the power cable to the mainboard. Figure 2-27 Connect cables

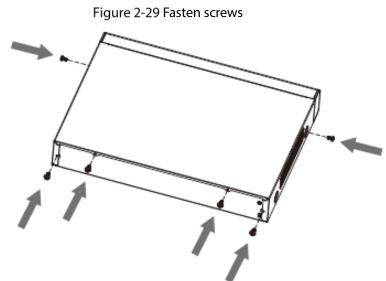

<u>Step 5</u> Put back the cover.

2	Audio input port (MIC IN)	Tow-way talk input port which receives the analog audio signal output from the devices such as microphone, pickup.
3	Video output port	Connect to video output devices such as TV.
4	Audio output port	Outputs the analog audio signal to the devices such as the sound box.
5	Audio input port	Receives the analog audio signal output from the devices such as microphone.
6	Video input port	Connect to analog camera to input video signal.
	Alarm input port 1–16	<ul> <li>Four groups of alarm output ports (Group 1: port 1 to port 4; Group 2: port 5 to port 8; Group 3: port 9 to port 12; Group 4: port 13 to port 16). These ports receive the signal from the external alarm source. There are two types; NO (Normally Open) and NC (Normally Closed).</li> <li>When your alarm input device is using external power, make sure the device and the NVR have the same ground.</li> </ul>
7	Alarm output port 1–5 (NO1–NO5; C1–C5; NC5)	<ul> <li>Five groups of alarm output ports. (Group 1: port NO1–C1,Group 2: port NO2–C2,Group 3: port NO3–C3, Group 4: port NO4–C4, Group 5: port NO5, C5, NC5). These ports output alarm signal to the alarm device. Make sure power supply to the external alarm device.</li> <li>NO: Normally open alarm output port.</li> <li>C: Alarm output public end.</li> <li>NC: Normally closed alarm output port.</li> </ul>

Table 3-17 Rear panel description

No.	Port Name	Function
	RS-485 communication port	You can connect to the control devices such as speed dome PTZ. RS-485_A port is connected by the cable A and RS-485_B is connected to the cable B.
	Four-wire full- duplex RS-485 port (T+, T-, R+, R-)	Four-wire full-duplex 485 port. T+ and T- is the output wire; R+ and R- is the input wire.
	Control power output (CTRL 12V)	Controls 12 VDC power output. It is to control the on-off alarm relay output.
	12V power output port	Provides power to external devices such as camera and alarm device. Note the supplying power shall be below 1A.
	Ŧ	Ground.
8	Network port	Connects to Ethernet port.
9	RS-232 debug COM.	It is for general COM debug to configure IP address or transfer transparent COM data.
10	USB port	Connects to the external devices such as keyboard, mouse, and USB storage device.
11	VGA video output	Outputs analog video signal. It can connect to the monitor to view analog video.
10	Video input port	Connect to analog camera to input video signal.
11	Network port	Connects to Ethernet port.
12	eSATA port	External SATA port which connects to the device with SATA port. Perform the jumper configuration when connecting HDD.
13	HDMI port	High definition audio and video signal output port. It outputs the same video source as VGA. It supports 4K resolution output and supports mouse operation and control. Note when the HDMI output resolution is 4K, the VGA output stops.
14	Power button	Turns on/off the Device.
15	Power input port	Inputs power.
16	GND	Ground.

# 3.2.8 DH-XVR1B16-I/DH-XVR1B08-I/DH-XVR1B08H-I/DH-XVR1B04-

# I/DH-XVR1B04H-I/DH-XVR1B16H-I

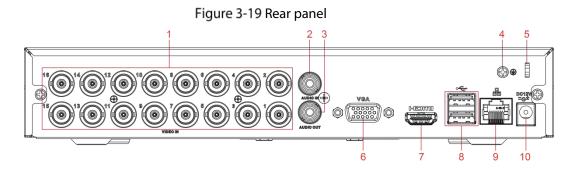

Table 3-18 Rear panel description

No.	Port Name	Function
1	Video input port	Connect to analog camera to input video signal.
2	Audio input port	Receives the analog audio signal output from the devices such as microphone.
3	Audio output port	Outputs the analog audio signal to the devices such as the sound box.
4	GND	Ground.
5	Power cable fastener	Use clamp to secure the power cable on the DVR in case there is any loss.
6	VGA video output	Outputs analog video signal. It can connect to the monitor to view analog video.
7	HDMI port	High definition audio and video signal output port. It outputs the same video source as VGA. It supports 4K resolution output and supports mouse operation and control. Note when the HDMI output resolution is 4K, the VGA output stops.
8	USB port	Connects to the external devices such as keyboard, mouse, and USB storage device.
9	Network port	Connects to Ethernet port.
10	Power input port	Inputs power.

# 3.2.9 DH-XVR5104C-I3/DH-XVR5108C-I3/DH-XVR5104C-4KL -I3

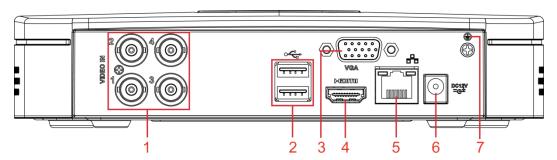

Figure 3-20 Rear panel

Table 3-19 Rear panel description

No.	Port Name	Function
1	Video input port	Connects to analog camera to input video signal.
2	USB port	Connects to external devices such as USB storage device, keyboard and mouse.
3	VGA port	Outputs analog video data to the connected display with VGA port.
4	HDMI port	High definition audio and video signal output port. The port outputs the uncompressed high definition video and multi- channel audio data to the connected display with HDMI port.
5	Network port	Connects to Ethernet port.
6	Power input port	Inputs 12 VDC power.
7	ŧ	Ground terminal.

# 3.3 Remote Control Operations

## 

Note the remote control is not our standard accessory and might not be included in the accessary bag. It is supplied dependent on the model you purchased.

Figure 3-21 Remote control

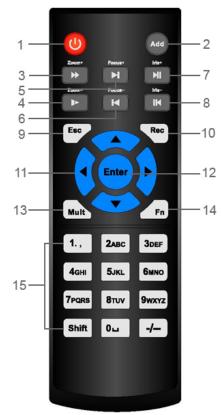

Table 3-20 Remote control description

No.	Name	Function
1	Power button	Press this button to boot up or shut down the device.
2	Address	Press this button to input device serial number, so that you can control the Device.
3	Forward	Multi-step forward speed and normal speed playback.
4	Slow motion	Multi-step slow motion speed or normal playback.
5	Next record	In playback state, press this button to play back the next video.
6	Previous record	In playback state, press this button to play back the previous video.
7	Play/Pause	<ul> <li>In normal playback state, press this button to pause playback.</li> <li>In pause state, press this button to resume to normal playback.</li> <li>In live view window page, press this button to enter video search menu.</li> </ul>
8	Reverse/pause	In the reverse playback state, press this button to pause reverse playback. In the reverse playback pause state, press this button to resume to playback reversing state.
9	Esc.	Go back to previous menu or cancel current operation (close front page or control).

No.	Name	Function
		Start or stop record manually.
		In record page, use the direction buttons to select the channel
10	Record	that you want to record.
		• Press this button for at least 1.5 seconds, and the manual record
		page will be displayed.
		Switch between current activated controls by going left or right.
11	Direction keys	In playback state, the keys control the playback progress bar.
		Aux function (such as operating the PTZ menu).
		Confirms an operation.
12	Enter/menu key	• Go to the <b>OK</b> button.
		Go to the menu.
13	Multiple-window switch	Switch between multiple-window and one-window.
		In single-channel monitoring mode, press this button to display
		the PTZ control and color setting functions.
		• Switch the PTZ control menu in PTZ control page.
		In motion detection page, press this button with direction keys
14	Fn	to complete setup.
14		• In text mode, press and hold this button to delete the last
		character. To use the clearing function: Long press this button
		for 1.5 seconds.
		• In HDD menu, switch HDD recording time and other information
		as indicated in the pop-up message.
	Alphanumeric	Input password, numbers.
15	keys	Switch channel.
	KEYS	Press Shift to switch the input method.

# 3.4 Mouse Operations

The operations are based on the considerations for right-handed users.

### Table 3-21 Mouse operations

Operation	Function
	Password input dialogue box pops up if you have not logged in yet.
	In live view window page, you can go to the main menu.
	When you have selected one menu item, click it to view menu content.
Click left mouse	Implement the control operation.
button	Modify checkbox or motion detection status.
	Click combo box to pop up drop-down list.
	In text box, click the corresponding button on the panel to enter a numeral or
	English character (small/capitalized).

Operation	Function
	<ul> <li>In English input mode: Click is to enter a backspace and click is to delete the previous character.</li> <li>?@#\$% = + * - • • 1 2 3 4 5 6 7 8 9</li> <li>In numeral input mode: Click is to clear and click is to delete the previous character.</li> </ul>
Double-click left mouse button	Implement special control operations such as double-click one item in the file list to play back the video. In multiple-window mode, double-click one channel to view in full-window.
Right-click	Double-click current video again to go back to previous multiple-window mode. Right-click in live view window page, the shortcut menu is displayed. For different series product, the shortcut menu may vary. Exit current menu without saving the modification.
Click scroll wheel button	In numeral input box: Increase or decrease numeral value. Switch the items in the combo box. Page up or page down.
Point to select and move	Select current control and move it.
Dragging a selection box with left mouse button	Select motion detection zone. Select privacy mask zone.

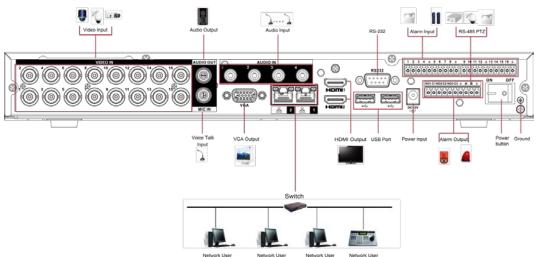

# **4** Connecting Basics

This chapter introduces the typical connection diagrams and ports connections.

# 4.1 Typical Connection Diagram

 $\square$ 

The following figure is for reference only and might differ from the actual product. Figure 4-1 Connection diagram

# 4.2 Connecting to Video and Audio Input and Output

# 4.2.1 Video Input

The video input port is BNC. The input video format includes: PAL/NTSC BNC (1.0  $V_{P-P}$ , 75  $\Omega$ ).

The video signal should comply with your national standards.

The input video signal shall have high SNR, low distortion; low interference, natural color, and suitable lightness.

## Guarantee the stability and reliability of the camera signal

The camera shall be installed in a cool, dry place away from the conditions such as direct sunlight, inflammable, and explosive substances.

The camera and the DVR should have the same grounding to ensure the normal operation of the camera.

## Guarantee stability and reliability of the transmission line

Use high quality, sound shielded BNC. Select suitable BNC model according to the transmission distance.

If the distance is too long, you should use twisted pair cable, and you can add video compensation devices or use optical fiber to ensure video quality.

You should keep the video signal away from the strong electromagnetic interference, especially the high tension current.

## Keep connection lugs in well contact

The signal line and shielded wire should be fixed firmly and in well connection. Avoid dry joint, lap welding, and oxidation.

# 4.2.2 Video Output

Video output includes a BNC (PAL/NTSC1.0  $V_{P-P}$ , 75  $\Omega$ ) output, a VGA output, and HDMI output. System supports BNC, VGA and HDMI output at the same time.

When you are using pc-type monitor to replace the monitor, pay attention to the following points:

- To defer aging, do not allow the pc monitor to run for a long time.
- Regular demagnetization will keep device maintain proper status.
- Keep it away from strong electromagnetic interference devices.

Using TV as video output device is not a reliable substitution method. You also need to reduce the working hour and control the interference from power supply and other devices. The low quality TV may result in device damage.

# 4.2.3 Audio Input

This series of products audio input port adopt BNC port.

Due to high impedance of audio input, use active sound pick-up.

Audio transmission is similar to video transmission. Try to avoid interference, dry joint, loose contact and it shall be away from high tension current.

# 4.2.4 Audio Output

The audio output signal parameter is usually over 200 mv 1 K $\Omega$  (BNC or RCA). It can directly connect to low impedance earphone, active sound box or amplifier-drive audio output device.

If the sound box and the pick-up cannot be separated spatially, it is easy to arouse squeaking. In this case you can adopt the following measures:

- Use better sound pick-up with better directing property.
- Reduce the volume of the sound box.
- Using more sound-absorbing materials in decoration can reduce voice echo and improve acoustics environment.
- Adjust the layout of speaker and pickup to reduce squeaking.

# 4.3 Connecting to Alarm Input and Output

Read the followings before connecting.

### Alarm input

- Make sure alarm input mode is grounding alarm input.
- Grounding signal is needed for alarm input.
- Alarm input needs the low level voltage signal.
- Alarm input mode can be either NC (Normally Closed) or NO (Normally Open).
- When you are connecting two DVRs or you are connecting one DVR and one other device, use a relay to separate them.

## Alarm output

The alarm output port should not be connected to high power load directly (It shall be less than 1A) to avoid high current which might result in relay damage. Use the contactor to realize the connection between the alarm output port and the load.

## How to connect PTZ decoder

- Ensure the decoder has the same grounding with DVR; otherwise the PTZ might not be controlled. Shielded twisted wire is recommended and the shielded layer is used to connect to the grounding.
- Avoid high voltage. Ensure proper wiring and some thunder protection measures.
- For too long signal wires, 120 Ω should be parallel connected between A, B lines on the far end to reduce reflection and guarantee the signal quality.
- "485 A, B" of DVR cannot parallel connect with "485 port" of other device.
- The voltage between of A, B lines of the decoder should be less than 5 V.

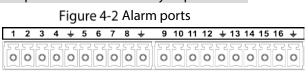

## Make sure the front-end device has soundly earthed

Improper grounding might result in chip damage.

# 4.3.1 Introducing Alarm Port

The alarm input ports are dependent on the model you purchased.

NO1 C1	NO2	C2	NO	3 C 3	Ť	Α	в	Ť
	12	3	7	F	Z	2	T	2
00	0	0	0	0	0	0	0	0

10, 11, 12, 13, 14, 15,	ALARM 1 to ALARM 16. The alarm becomes active in low voltage.
16	

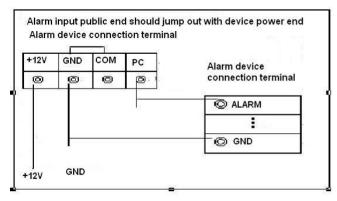

lcon	Description		
NO1 C1, NO2 C2,			
NO3 C3	There are four groups of normally open activation output (on/off button).		
÷	Ground cable.		
	485 communication port. They are used to control devices such as decoder.		
485 A/B	120 $\Omega$ should be parallel connected between A, B lines if there are too m		
	PTZ decoders.		

# 4.3.2 Alarm Input

Refer to the following figure for more information.

- Grounding alarm inputs which includes NO (Normally Open) and NC (Normally Closed) type.
- Parallel connect COM end and GND end of the alarm detector (Provide external power to the alarm detector).
- Parallel connect the Ground of the DVR and the ground of the alarm detector.
- Connect the NC port of the alarm sensor to the DVR alarm input (ALARM).
- Use the same ground with that of DVR if you use external power to the alarm device.

### Figure 4-3 Alarm input

# 4.3.3 Alarm Output

- Provide external power to external alarm device.
- To avoid overloading, read the following relay parameters table carefully.
- RS-485 A/B cable is for the A/B cable of the PTZ decoder.

# 4.3.4 Alarm Output Relay Parameters

## $\square$

Refer to the actual product for relay model information.

Table 4-2 Alarm output relay parameters

Model		HFD23/005-1ZS	HRB1-S-DC5V

# **5** Local Configurations

Read the following notes prior to using the Device.

 $\square$ 

- The figures in the Manual are used for introducing the operations and only for reference. The
  actual interface might be different dependent on the model you purchased.
- The Manual is a general document for introducing the product, so there might be some functions described for the Device in the Manual not apply to the model you purchased.
- Conventions for mouse operations on a menu.
  - $\diamond$  Click: On the menu, left-click the mouse once on an option to enter the option setting.
  - Right-click: On any page, right-click the mouse once to return to the previous level. For details about mouse operations, see "3.4 Mouse Operations."

# 5.1 Initial Settings

# 5.1.1 Booting up

A

- Ensure the input voltage corresponds to the power requirement of the Device. Power on the Device after the power cable is properly connected.
- To protect the Device, connect the Device with the power cable first, and then connect to the power source.
- To ensure the stable work of the Device and the external devices connected to the Device and to
  prolong the HDD life, it is recommended to refer to the national related standard to use the power
  source that provides stable voltage with less interference from ripples. UPS power source is
  recommended.
- <u>Step 1</u> Connect the Device to the monitor.
- <u>Step 2</u> Plug in the power cable to the Device.
- <u>Step 3</u> Press the power button to turn on the Device. The power indicator light is on.
  - On the connected monitor, the live view screen is displayed by default. If you turn on the Device during the time period that is configured for recording, the system starts recording after it is turned on, and you will see the icon indicating recording status is working in the specific channels.

# 5.1.2 Initializing the Device

When booting up for the first time, you need to configure the password information for **admin** (by default).

## $\square$

To secure the Device, it is strongly recommended for you to properly keep the password for admin and modify it regularly.

<u>Step 1</u> Turn on the Device.

Figure 5-1 Location, language and video standard

	forget the password, enter the security code that you will get from this
	reserved email address to reset the password of admin.
	Configure the security questions and answers.
Security Questions	If you forget the password, enter the answers to the questions can make you
	reset the password.
$\square$	

## Ш

If you want to configure the email or security questions fucntion later or you want to change the configurations, select Main Menu > ACCOUNT > Password Reset.

<u>Step 10</u> Click **OK** to complete the settings.

<u>Step 11</u> Select I have read and agree to all terms checkbox.

Step 12 Click Next.

The **Startup Wizard** page is displayed. For details about quick settings during startup, see "5.1.4 Setting Up with the Startup Wizard".

## 5.1.3 Resetting Password

You can reset the password by the following methods when you forget the password for admin account.

- If the password reset function is enabled, you can use mobile phone to scan the QR code to reset the password. For details, see "5.1.3.2 Resetting Password on Local Interface."
- If the password reset function is disabled, there are two situations:
  - If you configured security questions, you can find back the password by the security questions.
  - If you did not configure the security questions, you can only use the reset button on the mainboard to restore the Device to factory default. For details, see "5.1.3.3 Using Reset Button on the Mainboard."

 $\square$ 

Not all models are provided with reset button.

## 5.1.3.1 Enabling Password Reset Function

<u>Step 1</u> Select Main Menu > Account > Password Reset.

### Figure 5-7 Password reset

Password Reset Enable Reserved Email Security Question	SETTING
QR Code for Bindin	Please download the DMSS app and open an account. Go to "Me > Tool Manager > Device Password" in DMSS, and scan the QR code on the left to bind your device.
an 2 Enable t	a Parsword Paret function

Step 2 Enable the Password Reset function.

 $\square$ 

This function is enabled by default.

<u>Step 3</u> Click **Apply** to save the settings.

When Password reset function is disabled, you can retrieve password through following ways:

- You can retrieve password through resetting password on local interface or using Reset button on the mainboard when the device supports Reset button.
- You can only retrieve password through resetting password on local interface (make sure that security questions are preset) when the device does not support Reset button.

## 5.1.3.2 Resetting Password on Local Interface

<u>Step 1</u> Enter the login page.

- If you have configured unlock pattern, the unlock pattern login page is displayed. Click **Forgot Pattern**, the password login page is displayed.
- If you did not configure unlock pattern, the password login page is displayed. Click

to display the password with plaintext.

 $\square$ 

To log in from other user account, on the unlock pattern login page, click **Switch User**; or on the password login page, in the **User Name** list, select other users to login.

## 5.1.3.3 Using Reset Button on the Mainboard

You can always use the reset button on the mainboard to reset the Device to the factory default.

## $\square$

Not all models are provided with reset button.

- <u>Step 1</u> Disconnect the Device from power source, and then remove the cover panel. For details about removing the cover panel, see "2.2 Installing HDD."
- <u>Step 2</u> Find the reset button on the mainboard, and then press and hold the reset button for 5 seconds to 10 seconds.

Figure 5-17 Reset button

Step 3 Reboot the Device.

After the Device is rebooted, the settings have been restored to the factory default. You can start resetting the password.

# 5.1.4 Setting Up with the Startup Wizard

## 5.1.4.1 Entering Startup Wizard

The Startup Wizard helps you configure the basic settings to set up the Device. After you have initialized the Device, the **Startup Wizard** page is displayed.

### Figure 5-18 Startup wizard

Startup Wizard
Welcome to use startup wizard. The wizard will help you to set important parameters. Click Next to continue.
Image: Auto Check for Updates
Notify me when updates are available. The system checks for updates daily. To inform you of the latest firmware updates for your device, we need to collect device info such as IP address, device name, language preference, firmware version, device SN, etc. All collected info is used only for the purposes of verifying device validity and pushing update notifications. You can withdraw your consent at any time by opening MAINTAIN->Manager- >Update on device interface.
Next

- If you select the **Auto-check for updates** checkbox, the system will notify you automatically when updates are available.
- After the auto-check function is enabled, to notify you to update timely, the system will collect the information such as IP address, device name, firmware version, and device serial number. The collected information is only used to verify the legality of the Device and push upgrade notices.
- If you clear the Auto-check for updates checkbox, the system will not perform automatic checks.

## 5.1.4.2 Configuring General Settings

You can configure the general settings for the Device such as Device name, language, and settings for instant playback.

You can also configure general settings by selecting **Main Menu > SYSTEM > General > Basic**. <u>Step 1</u> On the **Startup Wizard** page, click **Next**.

Fi	gure 5-19 Ba	asic
Basic		
Device Name	XVR	
Device No.	8	
Language	English	*
Video Standard	PAL	
Instant Playback	5 min.	
Logout Time	10	min. Non-login User Permission
Navigation Bar		
Mouse Sensitivity		• +
	Slow	Fast
		5
		Previous Next

<u>Step 2</u> Configure the basic settings parameters.

Table 5-3 Basic settings

Parameter	Description	
Device Name	In the <b>Device Name</b> box, enter the Device name.	
Device No.	In the <b>Device No.</b> box, enter a number for the Device.	
Language	In the <b>Language</b> list, select a language for the Device system.	
Video Standard	In the Video Standard list, select PAL or NTSC according to your actual situation.	
Instant Playback In the Instant Playback box, enter the time length for playing recoded video. On the live view control bar, click the instant playback button to the recorded video within the configured time.		
Logout Time	In the <b>Logout Time</b> box, enter the standby time for the Device. The Device automatically logs out when it is not working for the configured time period. You need to log in to the Device again. The value ranges from 0 to 60. 0 indicates there is not standby time for the Device. Click <b>Monitor Channel(s) when logout</b> . You can select the channels that you want to continue monitoring when you logged out.	
Navigation Bar Enable the navigation bar. When you click on the live vie navigation bar is displayed.		
Mouse Pointer	Adjust the speed of double-click by moving the slider.	
Speed	The bigger the value is, the faster the double-clicking speed must be.	

## 5.1.4.3 Configuring Date and Time Settings

You can configure the system time, choose the time zone, set the daylight saving time, and enable the NTP server.

You can also configure date and time settings by selecting **Main Menu > SYSTEM > General > Date &Time**.

<u>Step 1</u> After you have configured the general settings, on the **General** page, click **Next**.

Figure 5-20 Date&Time

ate&Time		
System Time	2020 - 01 - 08 17 : 12 : 52	
Time Zone	(UTC+08:00) Beijing, Chongqing,	Hong Kong, 👻 Save
Date Format	YYYY MM DD	
Date Separator		
Time Format	24-Hour	
DST	Date 🔿 Week	
Start Time	Jan 👻 1 👻 00:00	
End Time	Jan 👻 2 🍷 00:00	
NTP		
Server Address	time.windows.com	Manual Update
Port	123	
Interval	60	min.
		Previous

Parameter	Description	
	In the <b>System Time</b> box, enter time for the system. Click the time zone list, you can select a time zone for the system, and the time in adjust automatically.	
System Time	$\wedge$	
	Do not change the system time randomly; otherwise the recorded video cannot be searched. It is recommended to avoid the recoding period or stop recording first before you change the system time.	
Time Zone	In the <b>Time Zone</b> list, select a time zone for the system.	
Date Format	In the <b>Date Format</b> list, select a date format for the system.	
Date Separator	In the <b>Date Separator</b> list, select a separator style for the date.	
Time Format	In the <b>Time Format</b> list, select <b>12-HOUR</b> or <b>24-HOUR</b> for the time display style.	
DST	Enable the Daylight Saving Time function. Click <b>Week</b> or click <b>Date</b> .	
Start Time		
End Time	<ul> <li>Configure the start time and end time for the DST.</li> </ul>	
NTP	Enable the NTP function to sync the Device time with the NTP server.	
	If NTP is enabled, device time will be automatically synchronized with server.	
Serve Address	In the Server Address box, enter the IP address or domain name of the corresponding NTP server. Click Manual Update, the Device starts syncing with the server immediately.	
Port	The system supports TCP protocol only and the default setting is 123.	
Interval	In the <b>Interval</b> box, enter the amount of time that you want the Device to sync time with the NTP server. The value ranges from 0 to 65535.	

<u>Step 2</u> Configure the settings for date and time parameters.

# 5.1.4.4 Configuring Network Settings

You can configure the basic network settings such as net mode, IP version, and IP address of the Device. You can also configure network settings by selecting **Main Menu > NETWORK > TCP/IP**. <u>Step 1</u> After you have configured the date and time settings, on the **Date &Time** page, click **Next**.

Figure 5-21 TCP/IP

	<b>.</b>					
TCP/IP						
Contraction and the second		NIC Member	Modify	Unbind		
NIC1	Single NI	C 1				
IP Address	Defa	ault Gateway:		MTU: 1500		
MAC Address:		net Mask:		Mode: Stati	c	
IP Version	IPv4					
Preferred DNS						
Alternate DNS						
Default Card	NIC1					
Test				Prev	ious	Next

<u>Step 2</u> Configure the settings for network parameters.

Table 5-4 Network parameters		
Parameter	Description	
IP Version	In the <b>IP Version</b> list, you can select <b>IPv4</b> or <b>IPv6</b> . Both versions are supported for access.	
MAC Address	Displays the MAC address of the Device.	
DHCP	<ul> <li>Enable the DHCP function. The IP address, subnet mask and default gateway are not available for configuration once DHCP is enabled.</li> <li>If DHCP is effective, the obtained information will display in the IP Address box, Subnet Mask box and Default Gateway box. If not, all values show 0.0.0.0.</li> <li>If you want manually configure the IP information, disable the DHCP function first.</li> <li>If PPPoE connection is successful, the IP address, subnet mask, default gateway, and DHCP are not available for configuration.</li> </ul>	
IP Address	Enter the IP address and configure the corresponding subnet mask and	
Subnet Mask	default gateway.	
Default Gateway	IP address and default gateway must be in the same network segment.	
DNS DHCP	Enable the DHCP function to get the DNS address from router.	
Preferred DNS	In the <b>Preferred DNS</b> box, enter the IP address of DNS.	
Alternate DNS	In the <b>Alternate DNS</b> box, enter the IP address of alternate DNS.	
MTU	<ul> <li>In the MTU box, enter a value for network card. The value ranges from 1280 byte through 1500 byte. The default is 1500.</li> <li>The suggested MTU values are as below.</li> <li>1500: The biggest value of Ethernet information package. This value is typically selected if there is no PPPoE or VPN connection, and it is also the default value of some routers, network adapters and switches.</li> <li>1492: Optimized value for PPPoE.</li> <li>1468: Optimized value for DHCP.</li> <li>1450: Optimized value for VPN.</li> </ul>	
Test	Click <b>Test</b> to test if the entered IP address and gateway are interworking.	

## 5.1.4.5 Configuring P2P Settings

You can add the Device into your cell phone client or the platform to manage.

You can also configure P2P function by selecting **Main Menu > Network > P2P**.

 $\square$ 

Make sure the DVR is connected into the Internet, and if yes, in the **Status** box of the P2P page, it shows **Online**.

<u>Step 1</u> After you have configured the network settings, on the **Network** page, click **Next**.

### Figure 5-22 P2P

<u>Step 2</u> Enable the P2P function.

### 

After the P2P function is enabled and connected to the Internet, the system will collect your information for remote access, and the information includes but not limited to email address, MAC address, and device serial number.

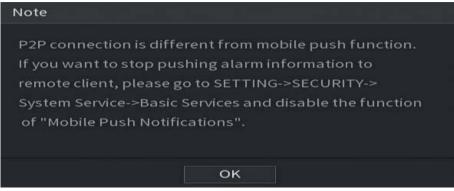

You can start adding the device.

- Cell Phone Client: Use your mobile phone to scan the QR code to add the device into the Cell Phone Client, and then you can start accessing the Device.
- Platform: Obtain the Device SN by scanning the QR code. Go to the P2P management platform and add the Device SN into the platform. Then you can access and manage the device in the WAN. For details, refer to the P2P operation manual.

- You can also enter the QR code of Cell Phone Client and Device SN by clicking in the top right of the pages after you have entered the Main Menu.
- If selection of this function is canceled, the **Note** page is displayed. Choose to enable it or not according to your actual need.

### Figure 5-23 Note

To use this function, take adding device into Cell Phone Client as an example.

## Adding Device into Cell Phone Client

<u>Step 1</u> Use your cell phone to scan the QR code under Cell Phone Client to download the application.

<u>Step 2</u> On your cell phone, open the application, and then tap

The menu is displayed. You can start adding the device.

1) Tap Device Manager.

Figure 5-24 Device manager

≡	Device Manager	+
	Q Search Device	
	Create device card	

2) Tap on the top right corner.

The page requiring device initialization is displayed. A pop-up message reminding you to make sure the Device is initialized is displayed.

- 3) Tap **OK**.
  - ◇ If the Device has not been initialized, Tap **Device Initialization** to perform initializing by following the onscreen instructions.
  - $\diamond$  If the Device has been initialized, you can start adding it directly.
- 4) Tap Add Device.

 $\square$ 

You can add wireless device or wired device. The Manual takes adding wired device as an example.

### Figure 5-25 Add

<	P2P	
Register Mode:		P2P

Live Preview:	Extra >
Playback:	Extra >
Start	Live Preview

- 6) Enter a name for the DVR, the username and password, scan the QR code under **Device SN**.
- 7) Tap **Start Live Preview**.

The Device is added and displayed on the live view page of the cell phone.

Figure 5-27 Live preview

## 5.1.4.6 Configuring Encode Settings

You can configure the settings of main stream and sub stream for the Device.

You can also configure encode settings by selecting Main Menu > CAMERA > Encode > Audio/Video. <u>Step 1</u> After you have configured the P2P settings, on the Audio/Video page, click Next.

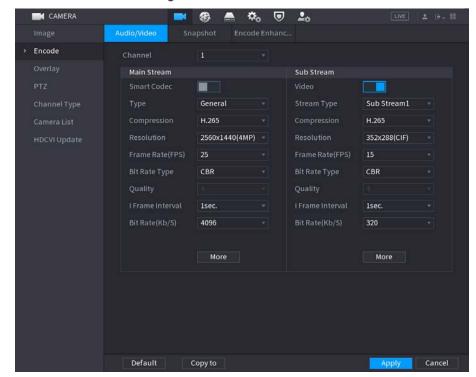

Figure 5-28 Encode

<u>Step 2</u> Configure the settings for the main/sub streams parameters.

	Table 5-5 Parameter description								
Parameter	Description								
Channel	In the <b>Channel</b> list, select the channel that you want to configure the settings for.								
Smart Codec	Enable the smart codec function. This function can reduce the video bit stream for non-important recorded video to maximize the storage space.								
Туре	<ul> <li>Main Stream: In the Type list, select General, MD (Motion Detect), or Alarm.</li> <li>Sub Stream: This setting is not configurable.</li> </ul>								
Compression	<ul> <li>In the Compression list, select the encode mode.</li> <li>H.265: Main profile encoding. This setting is recommended.</li> <li>H.264H: High profile encoding. Low bit stream with high definition.</li> <li>H.264: Main profile encoding.</li> <li>H.264B: Baseline profile encoding. This setting requires higher bit stream compared with other settings for the same definition.</li> </ul>								
Resolution	In the Resolution list, select resolution for the video. The maximum video resolution might be different dependent on your device model.								
Frame Rate (FPS)	Configure the frames per second for the video. The higher the value is, th clearer and smoother the image will become. Frame rate changes along wit the resolution. Generally, in PAL format, you can select the value from 1 through 25; in NTS format, you can select the value from 1 through 30. However, the actual rang of frame rate that you can select depends on the capability of the Device.								
Bit Rate Type	In the <b>Bit Rate Type</b> list, select <b>CBR</b> (Constant Bit Rate) or <b>VBR</b> (Variable Bit Rate). If you select <b>CBR</b> , the image quality cannot be configured; if you select <b>VBR</b> , the image quality can be configured.								
Quality	This function is available if you select <b>VBR</b> in the <b>Bit Rate</b> List. The bigger the value is, the better the image will become.								
l Frame Interval	The interval between two reference frames.								
Bit Rate (Kb/S)	In the <b>Bit Rate</b> list, select a value or enter a customized value to change the image quality. The bigger the value is, the better the image will become.								
Video	Enable the function for sub stream.								
Audio	<ul> <li>Click More, the More page is displayed.</li> <li>Audio: This function is enabled by default for main stream. You need to manually enable it for sub stream 1. Once this function is enabled, the recorded video file is composite audio and video stream.</li> </ul>								
Audio Source	<ul> <li>Audio Source: In the Audio Source list, you can select Local and HDCVI.</li> <li>Local: The audio signal is input from Audio In port.</li> <li>HDCVI: The audio signal is input from HDCVI camera.</li> </ul>								
Compression	• Compression: In the <b>Compression</b> list, select a format that you need.								

## 5.1.4.7 Configuring Snapshot Settings

You can configure the basic snapshot settings such as quantity of snapshot each time, channel(s) to take snapshot, and image size and quality of snapshot.

You can also configure general settings by selecting **Main Menu > CAMERA > Encode > Snapshot**.

For more information about snapshot settings, see "5.8 Configuring Snapshot Settings."

<u>Step 1</u> After you have configured the encode settings, on the **Encode** page, click **Next**.

Figure 5-29 Snapshot							
Snapshot

<u>Step 2</u> Configure the settings for the snapshot parameters.

Parameter	Description					
Manual Spanshot	In the Manual Snapshot list, select how many snapshots you want to take					
Manual Snapshot	each time.					
Channel	In the <b>Channel</b> list, select the channel that you want to configure the settings					
	for.					
	In the <b>Mode</b> list, you can select <b>Human Face</b> , <b>Event</b> , or <b>General</b> as the event					
Туре	type for which you want to take a snapshot.					
	• <b>Scheduled</b> : The snapshot is taken during the scheduled period.					
	• <b>Event</b> : The snapshot is taken when there is an alarm event occurs, such					
	as motion detection event, video loss, and local alarms.					
	• Face Snapshot: The snapshot is taken when the face is detected. The					
	face detection function is support only with the Channel 1.					
Size	In the <b>Size</b> list, select a value for the image. The bigger the value is, the better					
5120	the image will become.					
Quality	Configure the image quality by 6 levels. The higher the level is, the better the					
Quality	image will become.					
Interval	Configure or customize the snapshot frequency.					

#### Table 5-6 Snapshot parameters

### 5.1.4.8 Configuring Basic Storage Settings

You can configure the settings for the situations when HDD is full, file length and time length of recorded video, and the settings if to auto-delete the old files.

You can also configure basic storage settings by selecting **Main Menu > STORAGE > Basic**. <u>Step 1</u> After you have configured the encode settings, on the **Snapshot** page, click **Next**.

Figure 5-30 Basic

Basic				
Disk Full	Overwrite			
Create Video Files	Time Length	60	min.	
Delete Expired Files	Never			
			Previous	Next

<u>Step 2</u> Configure the basic storage settings parameters.

Parameter	Description
Disk Full	<ul> <li>Configure the settings for the situation when all the read/write discs are full, and there are no more free discs.</li> <li>Select Stop to stop recording</li> <li>Select Overwrite to overwrite the recorded video files always from the earliest time.</li> </ul>
	The locked recorded video files will not be overwritten.
Create Video Files	Configure the time length and file length for each recorded video.
Delete Expired Files	Configure whether to delete the old files and if yes, in the <b>Delete Expired</b> <b>Files</b> list, select <b>Custom</b> to configure the time length for how long you want to keep the old files.

### 5.1.4.9 Configuring Recorded Video Storage Schedule

You can configure the schedule for the recorded video such as channels to record, alarm settings, and the armed period.

You can also configure recorded video storage settings by selecting **Main Menu > STORAGE >** Schedule > Record.

<u>Step 1</u> After you have configured the basic storage settings, on the **Basic** page, click **Next**.

#### Figure 5-31 Record

Record														
Channel	Al		Pre-Re	cord	<b>4</b> s	ec.								
		Genera	ι 📰 Μ	lotion	-	Alarn		🥅 М	&A		🔳 Ir	ntelli	1	POS

🗆 Fri				1-11									*	•
🗆 Sat									11				*	÷
Default	Co	py to									Previo	ous		Next

<u>Step 2</u> Configure the record settings parameters.

Parameter	Description							
Channel	In the <b>Channel</b> list, select a channel to record the video.							
Pre-record	In the Pre-record list, enter the amount of time that you want to start the							
	recording in advance.							
Redundancy	<ul> <li>If there are several HDDs installed to the Device, you can set one of the HDDs as the redundant HDD to save the recorded files into different HDDs. In case one of the HDDs is damaged, you can find the backup in the other HDD.</li> <li>Select Main Menu &gt; STORAGE &gt; Disk Manager, and then set a HDD as redundant HDD.</li> <li>Select Main Menu &gt; STORAGE &gt; Schedule &gt; Record, and then select the Redundancy checkbox.</li> <li>If the selected channel is not recording, the redundancy function takes effect next time you record no matter you select the checkbox or not.</li> <li>If the selected channel is recording, the current recorded files will be packed, and then start recording according to the new schedule.</li> <li>Not all models support this function.</li> <li>The redundant HDD only back up the recorded videos but not snapshots.</li> </ul>							
Event type	Select the checkbox of the event type which includes <b>General</b> , <b>Motion</b> (motion detect, video loss, tempering, diagnosis), <b>Alarm</b> (IoT alarms, local alarms, alarms from alarm box, IPC external alarms, IPC Offline alarms), <b>M&amp;A</b> , <b>Intelligent</b> (IVS events, face detection), and <b>POS</b> .							
Period	Define a period during which the configured recording setting is active.							
Сору	Click <b>Copy to</b> to copy the settings to other channels.							

<u>Step 3</u> Define the video recording period by drawing or editing. By default, it is active all the time.

• Define the period by drawing.

1) Select the checkbox of event type.

Figure 5-32 Event type

🗹 General 📃 Motion 📕 Alarm 📙 M&A 🔚 Intelligent 📕 POS
--

- 2) Define a period. The system supports maximum six periods.

  - $\diamond$  Define for several days of a week: Click  $\square$  before each day one by one, the icon

switches to 🖾. You can define the period for the selected days simultaneously.

3) On the timeline, drag to define a period. The Device starts recoding the selected event type in the defined period.

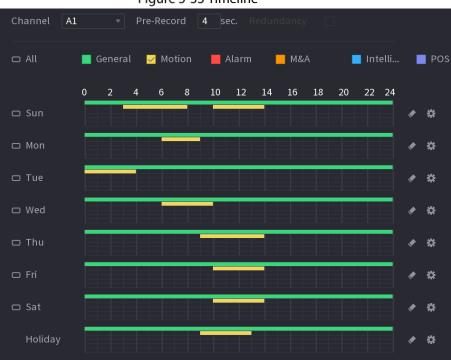

Figure 5-33 Timeline

The color bar indicates the event type that is effective in a defined period:

- Recording priority in case of event types are overlapped: M&A > Alarm > Intelligent > Motion > General.
- Select the checkbox of event type, and then click for the defined period.
- When selecting MD&Alarm, the MD and Alarm checkboxes will be cleared respectively.
- Define the period by editing. Take Sunday as an example.
- 4) Click

#### Figure 5-34 Period

								ОК	Cancel

- 5) Enter the time frame for the period and select the event checkbox.
  - $\diamond$  There are six periods for you to set for each day.
  - ◇ Under Copy to, select All to apply the settings to all the days of a week, or select specific day(s) that you want to apply the settings to.
- 6) Click **OK** to save the settings.

<u>Step 4</u> Click **OK** to complete the settings.

- $\square$ 
  - Click **Copy** to copy the settings to other channels.
  - After configuring the recording schedule settings, you need to perform the following operations to start recording according to the defined schedule.
    - Enable the alarm event and cofigure the settings for the recording channel. For details, see "5.10 Alarm Events Settings."
    - You need to enable the recording function, see "5.9.1 Enabling Record Control."

### 5.1.4.10 Configuring Snapshot Storage Schedule

You can configure the storage schedule for the snapshot such as channels to take snapshot, alarm settings, and the armed period.

You can also configure snapshot storage settings by selecting **Main Menu > STORAGE > Schedule > Snapshot**.

<u>Step 1</u> After you have configured the video recording settings, on the **Record** page, click **Next**.

### Figure 5-35 Snapshot

<u>Step 2</u> Configure the snapshot settings parameters.

Parameter	Description
Channel	In the <b>Channel</b> list, select a channel to take a snapshot.
Event tune	Select the checkbox of the event type which includes General, Motion,
Event type	Alarm, M&A, Intelligent, and POS.
	Define a period during which the configured snapshot setting is active. For
Period	details about defining a period, see "5.1.4.9 Configuring Recorded Video
	Storage Schedule."
Сору	Click <b>Copy to</b> copy the settings to other channels.

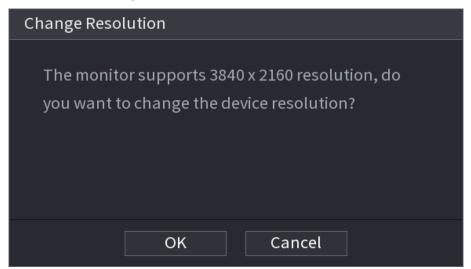

Step 3 Click OK.

Step 4 Click OK.

The live view screen is displayed. The setting up with startup wizard is completed. You can start using the Device.

<u>Step 5</u> (Optional) After the setting with startup wizard is completed, if the connected HDMI display resolution is inconsistent with default resolution (1280\*1024), a dialog box will pop up. Choose to switch the resolution or not.

Figure 5-36 Change resolution

# 5.2 Live View

After you logged in the Device, the live view is displayed. The number of channels displayed depends on your model.

To enter the live view screen from other pages, click **IIVE** on the top right of the screen.

Channel 1 Channel 4

Figure 5-37 Live view

## 5.2.1 Live View Screen

You can view the live video from the connected cameras through each channel on the screen.

- By default, the system time, channel name and channel number are displayed on each channel • window. This setting can be configured by selecting Main Menu > CAMERA > Overlay > Overlay.
- The figure in the bottom right corner represents channel number. If the channel position is changed or the channel name is modified, you can recognize the channel number by this figure and then perform the operations such as record query and playback.

lcon	Function	
	Indicates recording status. This icon displays when the video is being recorded.	
*	This icon displays when the motion detection occurs in the scene.	
?	This icon displays when the video loss is detected.	
	This icon displays when the channel monitoring is locked.	

#### Table 5-8 Live view description

#### <u>0-vr</u>

To switch the position of two channels, point to one of the two channels, and then drag the window to the other channel.

# 5.2.2 Live View Control bar

The live view control bar provides you access to perform the operations such as playback, zoom, realtime backup, manual snapshot, voice talk, adding remote devices, and streams switch.

When you move the pointer to the top middle position of a channel window, the live view control bar is displayed.

 $\square$ 

If there is not operation for six seconds after the control bar is displayed, the control bar hides automatically.

Figure 5-38 Analog channel

Figure 5-39 Digital channel

Figure 5-40 Control bar description

No.	Function	No.	Function	No.	Function

2	Digital Zoom	5	Mute	/	/
3	Instant Record	6	Audio Talk	/	/

### 5.2.2.1 Instant Playback

You can play back the previous five minutes to sixty minutes of the recorded video.

By clicking **1**, the instant playback page is displayed. The instant playback has the following

features:

- Move the slider to choose the time you want to start playing.
- Play, pause and close playback.
- The information such as channel name and recording status icon are shielded during instant playback and will not display until exited.
- During playback, screen split layout switch is not allowed.
- To change the playback time, select **Main Menu > SYSTEM > General > Basic**, in the **Instant Play** box, enter the time you want to play back.

### 🛱 а SYSTEM 3 **Q**\_0 20 General XVR English PAL [ [ [ Include language, format and time zone) Non-login User Permission 24 Navigation Bar Mouse Pointer Speed 0 Back

#### Figure 5-41 General

### 5.2.2.2 Digital Zoom

You can enlarge a specific area of the image to view the details by either of the following two ways.

• Click 💽, the icon switches to 🖾. Hold down the left mouse button to select the area you

want to enlarge. The area is enlarged after the left mouse button is released.

• Point to the center that you want to enlarge, rotate the wheel button to enlarge the area.

- For some models, when the image is enlarged in the first way described previously, the selected area is zoomed proportionally according to the window.
- When the image is in the enlarged status, you can drag the image toward any direction to view the other enlarged areas.
- Right-click on the enlarged image to return the original status.

### 5.2.2.3 Instant Record

You can record the video of any channel and save the clip into a USB storage device.

By clicking **I**, the recording is started. To stop recording, click this icon again. The clip is automatically saved into the connected USB storage device.

### 5.2.2.4 Manual Snapshot

You can take one to five snapshots of the video and save into a USB storage device.

By clicking 🛄, you can take snapshots. The snapshots are automatically saved into the connected

USB storage device. You can view the snapshots on your PC.

 $\square$ 

To change the quantity of snapshots, select **Main Menu > CAMERA > ENCODE > Snapshot**, in the **Manual Snap** list, select the snapshot quantity.

### 5.2.2.5 Mute (Analog channel only)

You can mute the video sound by clicking . This function is supported in single-channel view.

### 5.2.2.6 White Light (Supported on Camera with White Light Function)

Click I to manually control the camera to turn on the white light function.

### 5.2.2.7 Siren (Supported on Camera with Siren Function)

Click Click common to manually control the camera to generate alarm sound.

## 5.2.2.8 Two-way Talk (Digital channel Only)

You can perform the voice interaction between the Device and the remote device to improve efficiency of emergency. This function is supported only when the remotely connected IPC device supports bidirectional talk.

- Click , the icon switches to , the bidirectional talk of the remote device is turned on. The bidirectional talk of other digital channels is disabled.
- Click with to cancel the bidirectional talk. The bidirectional talk of other digital channels is resumed.

## 5.2.2.9 Adding Camera (Digital channel Only)

You can view the information of remote devices and add new remote devices to replace the current connected devices.

By clicking **Section**, the **Camera List** page is displayed. For details about adding the remote devices, see "5.6 Configuring Remote Devices."

## 5.2.3 Navigation Bar

睂

You can access the functions to perform operations through the function icons on the navigation bar. For example, you can access Main Menu and switch window split mode.

The navigation bar is disabled by default. It does not appear in the live view screen until it is enabled. To enable it, select **Main Menu > SYSTEM > General > Basic**, enable the Navigation Bar, and then click **Apply**.

## 5.2.4 Shortcut Menu

You can quickly access some function pages such as main menu, record search, PTZ setting, color setting and select the view split mode.

Right-click on the live view screen, the shortcut menu is displayed.

After you access any page through shortcut menu, you can return to the previous screen by rightclicking on the current screen.

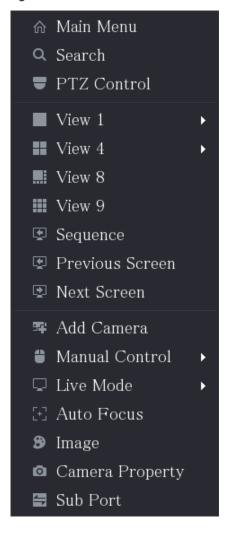

Figure 5-43 Shortcut menu

	Table 5-10 Menu parameters		
Function	Description		
Main Menu	Open Main Menu page.		
Search	Open the <b>PLAYBACK</b> page where you can search and play back record files.		
PTZ	Open the <b>PTZ</b> page.		
View Layout	Configure the live view screen as a single-channel layout or multi- channel layout.		
Previous Screen	Click Previous Screen to go to the previous screen. For example, if you		
Next Screen	are using 4-split mode, the first screen is displaying the channel 1-4, click <b>Next screen</b> , you can view channel 5-8.		
Add Camera	Open the <b>Camera List</b> page. For details, see "5.6 Configuring Remote Devices."		
Manual Control	<ul> <li>Select Record Mode, you can configure the recording mode as Auto or Manual, or stop the recording. You can also enable or disable snapshot function</li> <li>Select Alarm Mode, you can configure alarm output settings.</li> </ul>		
Live Mode	<ul> <li>Select General, the layout of live view screen is as default.</li> <li>Select Face, the detected face snapshots are displayed in the bottom of the live view screen.</li> </ul>		
Auto Focus	Point to the channel window and right-click on it to open the shortcut menu, and then click <b>Auto Focus</b> .		
Image	Open the <b>Image</b> page where you can adjust the video image color.		
Camera Property	Click to modify the camera properties.		
Sub Port	Click to switch to extra screen control.		

## 5.2.5 Al Preview Mode

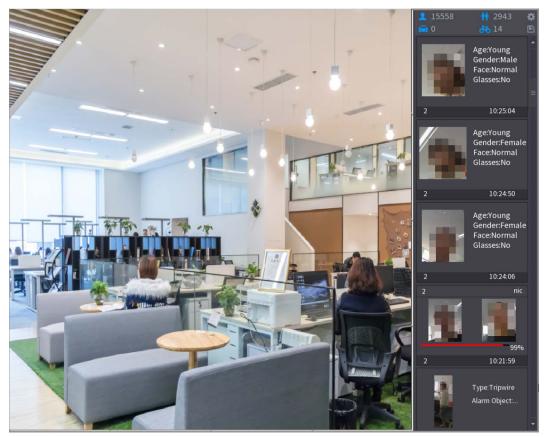

You can view the detected faces snapshots and comparison results of detected faces and the faces in the database, and play back the recorded picture file.

To display the AI preview mode, the face detection function must be enabled. For details, see "5.11.1.1 Face Detection."

Right-click on the live view screen to display the shortcut menu, and then select **Live Mode > Al Mode**, the Al preview mode page is displayed.

Figure 5-44 Live view

- 15558: Indicates the quantity of detected faces from 0 A.M. to midnight.
- 2943: Indicates the quantity of detected humans 0 A.M. to midnight.
- Indicates the quantity of detected motor vehicles 0 A.M. to midnight.
- 14 : Indicates the quantity of detected non-motor vehicles 0 A.M. to midnight.
- Click this icon and then select the face attributes that you want to display on the AI preview mode. Maximum four attributes are supported to display.
- Click this icon to export counting report in .csv format. The report information includes date, starting time, ending time, and the number of human, vehicle and face. The title of report is named as "device name\_XVR\_AI\_Statistics\_starting time\_ending time.csv".

## 5.2.6 Channel Sequence

You can adjust the channel sequence displayed on live page on actual needs.

## $\wedge$

The live view page displays the default channel sequence after restoring factory defaults.

<u>Step 1</u> Right-click on the live view page and select **Sequence**.

 $\square$ 

- The system displays the maximum number of window splits supported by the DVR after selecting Sequence.
- The Sequence page displays only the channel name and channel number of added

remote devices. 🞴 represents the remote device is online, and 🞴 represents the

remote device is offline.

#### Figure 5-46 Sequence

Sequence				
• A1	29			
• A2	Channel2			
• A3	Channel3			
• A4	Channel4			
• A5	Channel5			
• A6	Channel6			
• A7	Channel7			
A	oply	Cancel		

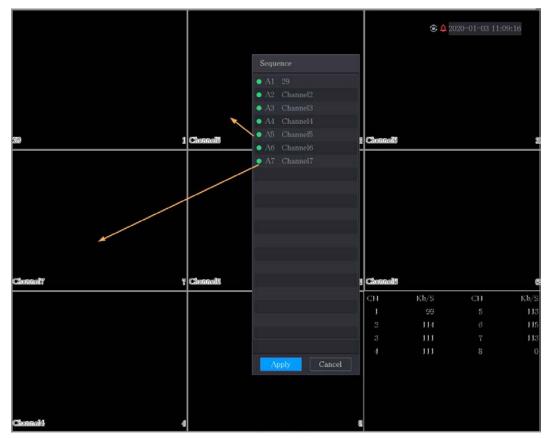

<u>Step 2</u> Adjust channel sequence.

- Drag a channel to the target window split.
- Drag a window split to another to change the sequence.

You can view the channel sequence according to the channel number on the lower-right corner of the window split.

Figure 5-47 Adjusted sequence

# 5.2.7 Color Setting

You can adjust the video image color effect such as sharpness, brightness, and contrast. The parameters are different according to the connected camera type. Take analog channel as an example.

Parameters displayed on the page vary from different cameras.

In the live view screen, right-click on the analog channel to see the shortcut menu, and then select **Image**, the **Image** page is displayed.

For details, see "5.5.1 Configuring Image Settings."

Figure 5-48 Image

Image			
Period	Period 1		
Effective Time	00 : 00	- 24 :00	
Saturation	0	+	50
Brightness	•	+	50
Contrast	•	+	50
Hue	0	+	50
Sharpness	0	+	
Color Mode	Standard		
Position	•	+	16
Custom	Default	Apply	Back

### Table 5-11 Image settings

Parameter Description	
Period	Divide 24 hours into two periods and configure the corresponding color
renou	settings.
Effective Time	Enable the function and then set the effective time for each period.
	Adjust the sharpness of image edge. The bigger the value is, the more
Sharpness	obvious the image edge, and the noise is also greater.
	The value ranges from 1 to 15. The default value is 1.
Hue	Adjust the hue of image. The value ranges from 0 to 100. The default
nue	value is 50.
	Adjust the image brightness. The value ranges from 0 to 100. The default
	value is 50.
Brightness	The bigger the value is, the brighter the image will become. You can
blightness	adjust this value when the image as a whole looks dark or bright.
	However, the image is likely to become dim if the value is too big.
	The recommended range is between 40 and 60.

Parameter	Description			
Contrast	<ul> <li>Adjust the image contrast. The bigger the value is, the more obvious the contrast between the light area and dark area will become. You can adjust this value when the contrast is not obvious. However, if the value is too big, the dark area is likely to become darker and the light area over exposed. If the value is too small, the image is likely to become dim.</li> <li>The value ranges from 0 to 100. The default value is 50. The recommended range is between 40 and 60.</li> </ul>			
Saturation	Adjust the color shades. The bigger the value, the lighter the color will become. This value does not influence the general image lightness. The value ranges from 0 to 100. The default value is 50. The recommended range is between 40 and 60.			
Color Mode	In the Color Mode list, you can select Standard, Soft, Bright, Vivid, Bank, Customized 1, Customized 2, Customized 3, and Customized 4. The sharpness, hue, brightness, contrast and saturation will adjust automatically according to the selected color mode.			
EQ	<ul> <li>Enhance the image effect. Adjust the effect value.</li> <li>Click , image is adjusted to the optimized effect automatically.</li> <li>Click , the current effect setting will be locked.</li> <li>Only HD analog channel supports this function.</li> </ul>			
Position	Adjust the display position of the image in the channel window. The value indicates pixel. The default value is 16.			
Custom	<ul> <li>This function is only supported by analog channel.</li> <li>You can customize four color modes.</li> <li>1. Click Custom. The Custom Color page is displayed.</li> <li>2. In the Color Mode list, select Custom 1, for example. Then configure the settings for sharpness, hue, brightness, contrast and saturation. If you select All, the configuration will apply to all four customized color modes.</li> <li>3. Click OK.</li> <li>4. On the Image page, in the Color Mode list, you can select the customized color mode.</li> </ul>			

# 5.2.8 Live View Display

## 5.2.8.1 Configuring Display Settings

You can configure the display effect such as displaying time title and channel title, adjusting image transparency, and selecting the resolution.

<u>Step 1</u> Select Main Menu > DISPLAY > Display.

	Figure 5-	-49 Display		
Main Screen				
	VGA/HDMI			
	Time Title	Output Port		
	Channel Title			
	Original Ratio	Show Message		
	AI Rule			
	SMD Preview			
	Live Audio			
	0	+ 50		
Transparency	- •	<b>+</b> 0%		
	1280x1024			
Live Mode	General			
			Apply	Back

<u>Step 2</u> Configure the settings for the display parameters.

Table 5-12 Display parameters

Parameter		Description
	Output Port	Indicates the main screen port.
	Time Title	Select the Time Title checkbox, the current system time displays in
		each channel window in live view screen. To hide the time, clear the
Main		checkbox.
Screen	Channel Title	Select the Channel Title checkbox, the channel name, channel
Screen		number and recording status display in each channel window in live
		view screen. To hide the time, clear the checkbox.
	Original Ratio	Select the Original Ratio checkbox, the video image displays in its
		actual size in the channel window.

Parameter		Description			
	Al Rule	Select the AI Rule checkbox to enable AI rule showing function. It is			
	Al Rule	enabled by default			
	SMD Preview	Display the SMD rule box while preview. It is disabled by default.			
	Live Audio	Select the Live Audio checkbox to enable the audio adjustment			
	LIVE AUGIO	function in the channel window on the live view screen.			
	Volume	Move the slider to adjust the volume of live audio.			
	Transparency	Configure the transparency of the graphical user interface (GUI). The			
	Transparency	higher the value, the more transparent the GUI becomes.			
	Resolution	Select resolution for the video. The default resolution for VGA port and HDMI port is 1280×1024.			
		Some of the resolution options might not be supported on the HDMI port.			
	Live Mode	<ul> <li>General: No information is displayed on the channel window.</li> <li>Al Mode: Displays the detected face snapshots.</li> <li>Not all models support this function.</li> </ul>			
	Enable	Enable extra screen function. After this function is enabled, you c select which port as extra screen port, and the other po automatically becomes the main screen port.			
Sub	Output Port	Select the VGA port or HDMI port as the port connected by a secondary monitor. For example, if you select HDMI port as the extra screen port, the VGA port automatically becomes the main screen port.			
Screen	Resolution	Select resolution for the video. The default resolution for VGA port and HDMI port is 1280 × 720. Some of the resolution options might not be supported on the HDMI port.			
	Show Message	After it is enabled, the sub screen will display alarm message when an alarm is triggered.			
• If you		ot display on the extra screen. e extra screen function, both the VGA port and HDMI port display the			

## 5.2.8.2 Configuring Zero-Channel Settings

You can view several video sources on one channel on the web end. <u>Step 1</u> Select Main Menu > DISPLAY > Zero-Channel.

Figure 5-50 Zero-channel

Enable			
Compression	H.264H		
	704x576(D1)		
	25		
Bit Rate(Kb/S)	1024		
		Apply	Back

<u>Step 2</u> Configure the settings for the zero-channel parameters.

Table 5-13 Zero-channel	parameters
-------------------------	------------

Parameter Description	
Enable	Enable zero-channel function.
Compression	In the Compression list, select the video compression standard according to
Compression	the device capability. The default is H.265.
Resolution	In the <b>Resolution</b> list, select the video resolution. The default is 704×576
Resolution	(D1).
	Select a value between 1 and 25 for PAL standard, and between 1 and 30 for
Frame Rate (FPS)	NTSC standard. The actual arrange is decided and selected dependent on
	the Device capability.
Rit Pata (Kb/S)	The default value is 1024Kb/S. The actual arrange is decided and selected
Bit Rate (Kb/S)	dependent on the Device capability and frame rate.

<u>Step 3</u> Click **Apply** to save the settings.

In the live page on the web, click 🗀 🖽 🖽 🖼 🖽 🖽 🕮 🖼 💈 to select one of the multi-

channel modes, and then you can view the local video image.

## 5.2.8.3 Configuring TV

 $\square$ 

Not all models support this function.

You can adjust the border margins in top, bottom, left and right directions as well as the brightness of the monitor connected to the Video out port of the Device.

<u>Step 1</u> Select Main Menu > DISPLAY > TV Adjust.

Figure 5-51 TV adjust

Top Margin	- •	+	0
Bottom Margin	- 0	+	0
Left Margin	- •	+	0
Right Margin	- 0	+	0
Brightness	0	+	128

<u>Step 2</u> Configure the parameters according to your actual situation.

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.2.9 Configuring Tour Settings

You can configure a tour of selected channels to repeat playing videos. The videos display in turn according to the channel group configured in tour settings. The system displays one channel group for a certain period and then automatically changes to the next channel group.

```
<u>Step 1</u> Select Main Menu > DISPLAY > Tour Setting.
```

# 5.4 Controlling PTZ Cameras

PTZ is a mechanical platform that carries a camera and a protective cover and performs overall control remotely. A PTZ can move in both horizontal and vertical direction to provide all-around view to the camera.

Before operating PTZ, ensure the network connection between PTZ and the Device.

# 5.4.1 Configuring PTZ Connection Settings

You need to configure the PTZ connection settings before use.

- Local connection: RS-485 Port for connecting speed dome or coaxial cable for connecting coaxial camera.
- Remote connection: local area network.

<u>Step 1</u> Select Main Menu > CAMERA > PTZ.

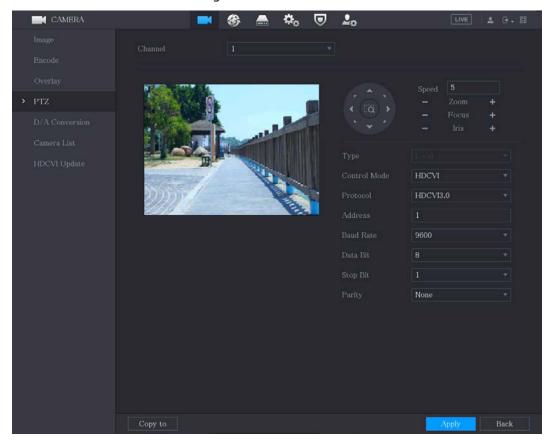

Figure 5-61 PTZ

<u>Step 2</u> Configure the settings for the PTZ connection parameters.

Parameter	Description		
Channel	In the Channel list, select the channel that you want to connect the PTZ		
Channel	camera to.		
Туре	• Local: Connect through RS-485 port or coaxial cable.		

Table 5-17 PTZ connection parameters

Parameter	Description				
	Remote: Connect through network by adding IP address of PTZ camera				
	to the Device.				
	In the Control Mode list, select Serial Port or HDCVI. For HDCVI series				
Control Mode	product, select HDCVI. The control signal is sent to the PTZ through the coaxial				
Control Mode	cable. For the serial mode, the control signal is sent to the PTZ through the RS-				
	485 port.				
Protocol	In the <b>Protocol</b> list, select the protocol for the PTZ camera. For example, select				
PIOLOCOI	HDCVI3.0.				
	In the Address box, enter the address for PTZ camera. The default is 1.				
Address					
Address	The entered address must be the same with the address configured on the				
	PTZ camera; otherwise the PTZ camera cannot be controlled from the Device				
Baud Rate	In the Baud Rate list, select the baud rate for the PTZ camera. The default is				
Dadu Nate	9600.				
Data Bits The default value is 8.					
Stop Bits The default value is 1.					
Parity The default value is NONE.					
ep 3 Click Apply	to save the settings.				

Click **Copy** to copy the settings to other channels.

# 5.4.2 Working with PTZ Control Panel

PTZ control panel performs the operations such as directing camera in eight directions, adjusting zoom, focus and iris settings, and quick positioning.

### **Basic PTZ Control Panel**

Right-click on the live view screen and then select **PTZ**. The PTZ control panel is displayed.

Figure 5-62 PTZ control panel

The functions with buttons in gray are not supported by the system.

Table 5-18 PTZ control panel description

Parameter	Description		
Speed	Controls the movement speed. The bigger the value is, the faster the		
speed	movement will be.		
Zoom	Zoom out.		
	+: Zoom in.		
Focus	Focus far.		
	+: Focus near.		
Iris	E Image darker.		
	: Image brighter.		
PTZ movement	Supports eight directions.		
	<ul> <li>Fast positioning button.</li> <li>Positioning: Click anywhere on the live view screen, the PTZ will turn to this point and move it to the middle of the screen.</li> <li>Zooming: On the fast positioning screen, drag to draw a square on the view. The square supports zooming.</li> <li>Dragging upward is to zoom out, and dragging downward is to zoom in.</li> <li>The smaller the square, the larger the zoom effect.</li> </ul>		
	Not all models support this function and can only be controlled through mouse operations.		
•	Click , you can control the four directions (left, right, up, and down) PTZ movement through mouse operation.		
•	Click to open the expanded PTZ control panel.		

## Expanded PTZ Control Panel

On the basic PTZ control panel, click to open the expanded PTZ control panel to find more options.

# 5.4.3 Configuring PTZ Functions

# 5.4.3.1 Configuring Presets

Step 1 On the Expanded PTZ Control Panel, click

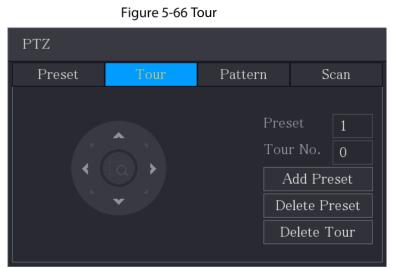

Figure 5-65 Preset

PTZ			
Preset	Tour	Pattern	Scan
*		Pres	set 1 Setting

- <u>Step 2</u> Click the direction arrows to the required position.
- <u>Step 3</u> In the **Preset** box, enter the value to represent the required position.
- <u>Step 4</u> Click **Setting** to complete the preset settings.

### 5.4.3.2 Configuring Tours

- <u>Step 1</u> On the Expanded PTZ Control Panel, click
- Step 2 Click the Tour tab.

- <u>Step 3</u> In the **Tour No**. box, enter the value for the tour route.
- <u>Step 4</u> In the **Preset** box, enter the preset value.
- Step 5 Click Add Preset.

A preset will be added for this tour.

- You can repeat adding more presets.
- Click **Delete Preset** to delete the preset for this tour. This operation can be repeated to delete more presets. Some protocols do not support deleting.

### 5.4.3.3 Configuring Patterns

Step 1 On the Expanded PTZ Control Panel, click

Step 2 Click the Pattern tab.

Figure 5-67 Pattern PTZ Preset Tour Scan Start End

- <u>Step 3</u> In the **Pattern** box, enter the value for pattern.
- Click Start to perform the directions operations. You can also go to the PTZ Control Panel to Step 4 perform the operations of adjusting zoom, focus, iris, and directions.
- <u>Step 5</u> On the PTZ page, click End to complete the settings.

### 5.4.3.4 Configuring Scan

- ٩ Step 1 On the Expanded PTZ Control Panel, click
- Step 2 Click the Scan tab.

Figure 5-68 Scan

PTZ		-	
Preset	Tour	Pattern	Scan
•			Left Limit Right Limit

<u>Step 3</u> Click the direction arrows to position the left and right limits.

# 5.4.4 Calling PTZ Functions

After you have configured the PTZ settings, you can call the PTZ functions for monitoring from the Expanded PTZ Control Panel.

### 5.4.4.1 Calling Presets

<u>Step 1</u> On the expanded PTZ Control Panel, in the **No.** box, enter the value of the preset that you want to call.

Step 2 Click is to call the preset.

<u>Step 3</u> Click again to stop calling the preset.

### 5.4.4.2 Calling Tours

- <u>Step 1</u> On the Expanded PTZ Control Panel, in the **No.** box, enter the value of the tour that you want to call.
- Step 2 Click to call the tour.

<u>Step 3</u> Click again to stop calling the tour.

### 5.4.4.3 Calling Patterns

- <u>Step 1</u> On the Expanded PTZ Control Panel, in the **No.** box, enter the value of the pattern that you want to call.
- Step 2 Call **I** to call the pattern.

The PTZ camera moves according to the configured pattern repeatedly.

Step 3 Click again to stop calling the pattern.

### 5.4.4.4 Calling AutoScan

<u>Step 1</u> On the Expanded PTZ Control Panel, in the **No.** box, enter the value of the border that you want to call.

Step 2 Click

The PTZ camera performs scanning according to the configured borders.

Step 3 Click again to stop auto scanning.

### 5.4.4.5 Calling AutoPan

Step 1 On the Expanded PTZ Control Panel, click 2 to start moving in horizontal direction.

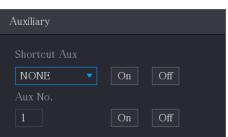

Step 2 Click again to stop moving.

### 5.4.4.6 Using AUX Button

On the Expanded PTZ Control Panel, click **Setting**, the AUX setting page is displayed.

- In the **Shortcut Aux** list, select the option that corresponds to the applied protocol.
- In the Aux No. box, enter the number that corresponds to the AUX switch on the decoder.

#### Figure 5-70 Auxiliary

### 5.4.5 Calling OSD Menu

For the coaxial camera, you can call the OSD menu through the Expanded PTZ Control Panel.

Step 1 On the Expanded PTZ Control Panel, click

Figure 5-71 PTZ menu

Figure 5-72 OSD

Step 3On the PTZ Menu page, click the arrow button to select the onscreen parameters.Step 4Click Enter to complete the settings.

# 5.5 Configuring Camera Settings

## 5.5.1 Configuring Image Settings

You can configure the image settings such as saturation, contrast, brightness, sharpness for each connected camera.

<u>Step 1</u> Select Main Menu > CAMERA > Image.

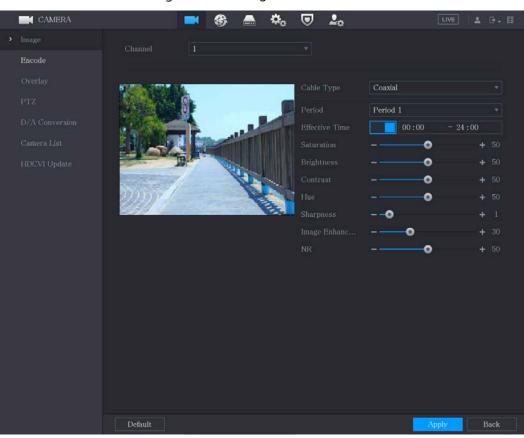

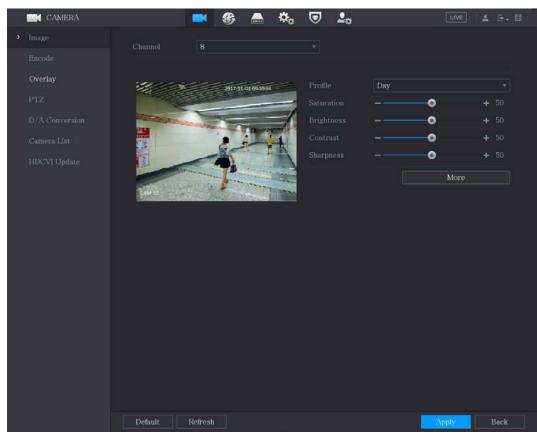

Figure 5-73 Analog channel

Figure 5-74 Digital channel

<u>Step 2</u> Configure the settings for the image parameters.

On the digital channel page, click More to display more parameters.

Parameter	Description
Channel	In the <b>Channel</b> list, select the channel that you want to configure.
Cable Type	In the <b>Cable Type</b> list, select the cable type that the camera uses.
Period	In the <b>Period</b> list, select a time period for the image settings. The image settings will be only used during the selected period.
Effective Time	Enable the effective function. In the <b>Effective Time</b> box, enter the start time and end time for the period you selected.
Saturation	Adjusts the color shades. The bigger the value, the lighter the color will become. This value does not influence the general image lightness. The value ranges from 0 to 100. The default value is 50. The recommended range is between 40 and 60.
Contrast	Adjusts the image contrast. The bigger the value is, the more obvious the contrast between the light area and dark area will become. You can adjust this value when the contrast is not obvious. However, if the value is too big, the dark area is likely to become darker and the light area over exposed. If the value is too small, the image is likely to become dim. The value ranges from 0 to 100. The default value is 50. The recommended range is between 40 and 60.
Brightness	Adjusts the image brightness. The bigger the value is, the brighter the image will become. You can adjust this value when the image as a whole looks dark or bright. However, the image is likely to become dim if the value is too big. The value ranges from 0 to 100. The default value is 50. The recommended range is between 40 and 60.
Hue	Adjusts the hue of image. The value ranges from 0 to 100. The default value is 50.
Sharpness	Adjusts the sharpness of image edge. The bigger the value is, the more obvious the image edge, and the noise is also greater. The value ranges from 1 to 15. The default value is 1.
Image Enhance	Adjusts the image definition. The bigger the value is, the clearer the image will become, but there will be more noises.
NR	Reduces the noises from image. The bigger the value is, the better the image will become.

Parameter	Description				
	In the Config File list, select Day, Night, Normal, or Switch By Period. The				
	system configures the parameters correspondingly.				
	Day: Apply the configuration during daytime.				
Config File	Night: Apply the configuration during nighttime.				
	Normal: Apply the configuration during day and night.				
	• Switch by Period: If you select this option, you need to configure the				
	sunrise time and sunset time where you are located.				
Mirror	Enable the function, the left and right side of the video image will be				
	switched. It is disabled by default.				
	This function specially applies to the image which frame rate is configured				
3D Denoise	as 2 at least. It reduces the noises by making use of the information				
	between two frames. The bigger the value is, the better the effect.				
Flip	In the <b>Flip</b> list, you can select <b>180°</b> to change the video image display.				
	By default, the setting is <b>No Flip</b> .				
Light	In the Light list, select Close or Enable to use the backlight compensation				
	or not.				
	Configure the white balance to adjust the general hue of the image. The				
	default setting is <b>Auto</b> .				
	• Auto: Automatically apply white balance to different colors to make the				
Scene Mode	image color display normally.				
	Sunny: Apply the threshold value to sunny environment.				
	Night: Apply the threshold value to night.				
	Customized: Manually adjust the Red Gain and Blue Gain values.				
	Configure the color and black&white mode of the image. This setting is not				
	affected by the configuration files. The default setting is <b>Auto</b> .				
	Color: The camera outputs color image only.				
Day & Night	• Auto: Depends on the camera, such as overall brightness and whether				
	there is an IR light, either color image or black&white image is output.				
	B/W: The camera outputs Black and white image only.				
	By Time: The camera outputs image according to the configured sunrise				
	time and sunset time.				

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.5.2 Configuring Encode Settings

<u>Step 1</u> Select Main Menu > CAMERA > Encode > Audio/Video.

Figure 5-75 Audio/video

#### <u>Step 2</u> Configure the settings for the main/sub streams parameters.

#### Table 5-20 Main/sub stream parameters

Parameter	Description							
Channel	In the <b>Channel</b> list, select the channel that you want to configure the							
Channel	settings for.							
	General: Uses general coding strategy.							
	• Smart Codec: Enables the smart codec function. This function can							
	reduce the video bit stream for non-important recorded video to							
Coding Strategy	maximize the storage space.							
	• AI Codec: Enables the AI codec function. This function can reduce the							
	video bit stream for non-important recorded video to maximize the							
	storage space.							
Tuno	• Main Stream: In the <b>Type</b> list, select <b>General</b> , <b>Motion</b> , or <b>Alarm</b> .							
Туре	Sub Stream: This setting is not configurable.							
	In the <b>Compression</b> list, select the encode mode.							
	H.265: Main profile encoding. This setting is recommended.							
Compression	• H.264H: High profile encoding. Low bit stream with high definition.							
Compression	H.264: General profile encoding.							
	• H.264B: Baseline profile encoding. This setting requires higher bit stream							
	compared with other settings for the same definition.							
	In the <b>Resolution</b> list, select resolution for the video.							
Resolution	The maximum video resolution might be different dependent on your device							
	model.							

Parameter	Description						
	Configure the frames per second for the video. The higher the value, the						
	clearer and smoother the image will become. Frame rate changes along						
	with the resolution.						
Frame Rate (FPS)	Generally, in PAL format, you can select the value from 1 through 25; in						
	NTSC format, you can select the value from 1 through 30. However, the						
	specific range of frame rate that you can select depends on the capability of						
	the Device.						
Quality	This function is available if you select <b>VBR</b> in the <b>Bit Rate</b> List.						
Quality	The higher the value, the better the image will become.						
l Frame Interval	The interval between two reference frames.						
Dit Data (Kh /C)	In the <b>Bit Rate</b> list, select a value or enter a customized value to change the						
Bit Rate (Kb/S)	image quality. The bigger the value is, the better the image will become.						
Video	Enable the function for sub stream.						
	Click <b>More</b> , the <b>More</b> page is displayed.						
Audio	• Audio: This function is enabled by default for main stream. You need to						
Addio	manually enable it for sub stream 1. Once this function is enabled, the						
	recorded video file is composite audio and video stream.						
	• Audio Source: In the Audio Source list, you can select LOCAL and						
Audio Source	HDCVI.						
	$\diamond$ LOCAL: The audio signal is input from Audio input port.						
	◇ HDCVI: The audio signal is input from HDCVI camera.						
Compression	• Audio Format: In the <b>Compression</b> list, select a format that you need.						

<u>Step 3</u> Click **Apply** to complete the settings.

Click **Copy to** to copy the settings to other channels.

## 5.5.3 Configuring Snapshot Settings

<u>Step 1</u> Select Main Menu > CAMERA > Encode > Snapshot.

		- <b>J</b>							
į.	CAMERA		3 4	• • <sub>•</sub>	▣	20	LIVE	<b>4</b> G	- 8
	Image	Audio/Video	apshot	Encode Er	hanc

		Default Cop	y to				Apply	Can	cei

#### Figure 5-76 Snapshot

#### <u>Step 2</u> Configure the settings for the snapshot parameters.

#### Table 5-21 Snapshot parameters

Parameter	Description						
Manual Snapshot	In the Manual Snapshot list, select how many snapshots you want to take						
	each time.						
Channel	In the <b>Channel</b> list, select the channel that you want to configure the settings						
	for.						
	In the Type list, you can select Scheduled, Event, or Face Snapshot as the						
	event type for which you want to take a snapshot.						
	• Scheduled: The snapshot is taken during the scheduled period.						
Туре	• Event: The snapshot is taken when there is an alarm event occurs, such						
	as motion detection event, video loss, and local alarms.						
	• Face Snapshot: The snapshot is taken when the face is detected. The						
	face detection function is support only with the Channel 1.						
Size	In the Size list, select a value for the image. The bigger the value is, the better						
Size	the image will become.						
Quality	Configures the image quality by 6 levels. The higher the level, the better the						
Quality	image will become.						
	Configures or customizes the snapshot frequency. You can select 1 second						
Interval	per one snapshot to 7 seconds per one snapshot. The maximum is 3600						
	seconds per one snapshot.						

<u>Step 3</u> Click **Apply** to complete the settings.

Click Copy to to copy the settings to other channels.

## 5.5.4 Configuring Encode Enhancement

You can enable this function and get more FPS in encode settings (see "5.5.2 Configuring Encode Settings"). In the meantime, you will not be able to use extra screen function (see "5.2.8.1 Configuring Display Settings") and AI functions (see "5.11 AI Function").

Select Main Menu > CAMERA > Encode > Encode Enhancement.

		Refresh				Apply	Back

#### <u>Step 2</u> Configure the settings for the covered area parameters.

Figure 5-80 Covered	l area narameters
Figure 5-60 Covered	a alea parameters

Parameter	Description						
Channel	In the <b>Channel</b> list, select the channel that you want to configure the						
Channel	settings for.						
	• Preview: Select the Live checkbox to apply the configured covered block						
Live	to the selected channel window in the live view screen.						
LIVE	• Record: Select the <b>Record</b> checkbox to apply the configured covered						
	block to the selected channel window during recording.						
	To configure covering block, do the following:						
	1. Select the Live checkbox or the Record checkbox, or select the						
	both. The "1, 2, 3, 4" buttons are activated.						
Record	2. Click the buttons to select blocks.						
	3. A triangle solid black block is displayed.						
	4. Drag the block to the area that you want to cover and adjust the						
	size of the block. You can configure total 4 covered blocks.						

<u>Step 3</u> Click **Apply** to complete the settings.

## 5.5.7 Configuring Channel Type

You can configure the channel type as **Analog** or **IP** channel.

<u>Step 1</u> Select Main Menu > CAMERA > Channel Type.

	Figure 5-81 Chaimer type									
	CAMERA		<b>•</b>	۵	ی چ	20	LIVE 🕹 🕀 - 🖽

~	Channel Type	6								
	Camera List	7								
		8								
	HDCVI Update	9 - 16				channel after it is disa				
							Apply Back			

#### Figure 5-81 Channel type

<u>Step 2</u> Configure the channels.

- Analog Channel: Select the transmission medium such as CVI, AHD, CVBS, and then follow the onscreen instructions to complete the settings.
- IP Channel: You can enable the IP channels by disabling the corresponding analog channels. The Device also provides expanded IP channels for your use, such as the 17–64 channels in 0.

- The 17–64 channels are only for IP camera and the range changes dependent on the model you purchased.
- The channel selection for analog camera or IP camera are in sequence, for example, if you want to select channels for IP camera, you need to select from the last channel number Channel 16 first, which means, you cannot jump to select the channel 15 directly until you have selected the channel 16.
- <u>Step 3</u> Click **Apply** and follow the onscreen instructions to complete the settings.

## 5.5.8 Upgrading Coaxial Camera

#### <u>Step 1</u> Select Main Menu > CAMERA > HDVCI Update.

Figure 5-82 Update

					Update

- Step 2 Click Browse.
- <u>Step 3</u> Select the upgrade file and then click **OK**.

You need to insert the USB storage device that contains the upgrading files.

- <u>Step 4</u> Select the checkbox of the channel that you want to upgrade.
- Step 5 Click Update.

If the upgrading is successful, the system pops up a message indicating the upgrading is completed.

# 5.6 Configuring Remote Devices

## 5.6.1 Adding Remote Devices

This function is available after you have configured the channel type as IP channel as described in previous section, see "5.5.7 Configuring Channel Type."

You can add remote devices by adding the IP address.

Select Main Menu > CAMERA > Camera List > Add Camera, the Add Camera page is displayed.

- Step 4 Click Initialize.

Figure 5-86 Enter password

Enter Passwor	rd	
	☑ Using current device password and email info.	
		Next

- <u>Step 5</u> Configure the password and email information.

If you select the **Using current device password and email info** checkbox, the remote device automatically uses the current password and email information, so you do not need to set the password and email address again and can go to Step 6.

1) Clear the Using current device password and email info checkbox.

Figure 5-87 Password setting

Enter Password					
🗌 Using current d	evice password and email info.				
User Password Confirm Password	admin Use a password that has 8 to 32 characters, it can be a combination of letter(s), number(s) and symbol(s) with at least two kinds of them.(please do not use special symbols like '"; : &)				
	Next				

2) Configure the settings for the password setting parameters.

		- ·	
Figure	5-88	Password	parameters

Parameter	Description
User	The default is admin.
Password	The new password can be set from 8 characters through 32 characters and contains at least two types from number, letter and special characters
Confirm Password	(excluding"'", """, ";", ":" and "&"). Enter a strong password according to the password strength bar indication.

3) Click Next.

Figure 5-89 Password protection

Password Protection	
Password Protection	To reset password, please input properly or update in time
Back	Next Skip

4) Select the **Email Address** box and enter the email address that you want to reserve for password reset in the future.

If you do not want to set the reserved email address, click Skip.

Step 6 Click Next.

Figure 5-90 Network

NETWORK	
Checked Device No.: 1	
O DHCP	
• STATIC	
IP Address	Incremental Value 1
Subnet Mask	
Default Gateway	
1 IP Address	
Back	Next Skip

#### <u>Step 7</u> Configure the IP address.

- Select the **DHCP** checkbox, you do not need to enter the IP address information, because the system will allocate one IP address to the remote device.
- Select the **STATIC** checkbox, you need to enter the IP address, subnet mast, default gateway, and incremental value. The system will allocate the IP address to the remote devices by progressively increasing the last part of the IP address when initializing devices in batches.

When configuring IP address for multiple remote devices which were not in the same network segment, these remote devices will belong to the same network segment after configuration.

Step 8 Click Next.

The initializing is started.

#### Figure 5-91 Initialization finished

	Search Device	2	Manu		ify IP	Filter None	
	Channel	Modify	Delete		Address	Port	Device Nan
						Import	Export

Figure 5-92 Search device

- <u>Step 2</u> Select the checkbox of the device.
- Step 3 Click Add.

The device is added into the **Added Device** area.

- You can also double-click the device to add it into the Added Device area.
- You can add devices in batches.

### 5.6.1.3 Adding Remote Devices Manually

<u>Step 1</u> On the Add Camera page, click Manual Add.

Figure 5-93 Manual add

Manual Add				
Channel	D8 -			
Channel				
Manufacturer	ONVIF 🔻			
IP Address	1287 828 8 8			
RTSP Port	Self-adaptive 🔻			
HTTP Port	80

Password		Connect		
Total Channels		Setting		
Remote CH No.	D1 •			
Decode Strategy	General 🔻			
Encryption				
🔘 Auto 🔿 Te	CP 🔿 UDP 🔿 MU	LTICAST		
			OK	Cancel

<u>Step 2</u> Configure the settings for the manual adding device parameters.

Figure 5-94 Manual add parameters

Parameter	Description
Channel	In the <b>Channel</b> list, select the channel that you want use on the Device to
Channel	connect the remote device.
Manufacturer	In the Manufacturer list, select the manufacturer of the remote device.
	In the IP Address box, enter the IP address of remote device.
IP Address	
	The default is 192.168.0.0 which the system cannot connect to.
RTSP Port	The default value setting is 554. You can enter the value according to your
RTSP POIL	actual situation.
	The default value setting is 80. You can enter the value according to your
HTTP Port	actual situation.
HITP POIL	If you enter other value, for example, 70, and then you should enter 70 after
	the IP address when logging in the Device by browser.
TCP Port	The default value setting is 37777. You can enter the value according to your
	actual situation.

Description
Enter the user name of the remote device.
Enter the password of the user for the remote device.
Enter the remote channel number of the remote device that you want to add.
In the Decoder Strategy list, select Default, Realtime, or Fluent.
<ul> <li>If the remote device is added through private protocol, the default type is TCP.</li> <li>If the remote device is added through ONVIF protocol, the system supports Auto, TCP, UDP, or MULTICAST.</li> <li>If the remote device is added through other manufacturers, the system supports TCP and UDP.</li> </ul>
If the remote device is added through ONVIF protocol, enabling the <b>Encryption</b> checkbox will provide encryption protection to the data being transmitted.

#### 

- Only one device can be added manually at one time.
- Indicates successful connection and I indicates connection failed.

### 5.6.1.4 Modifying or Deleting Remote Devices

You can modify and delete the added devices.

• To modify the remote devices, do the following:

Step 1 Click or double-click a device.

Figure 5-95 Modify

Modify				
Channel	D8 •			
Manufacturer	Private 🔻			
IP Address				
TCP Port				
Username	admin			
Password	•••••	Connect		
Total Channels				
Remote CH No.	D1 ~			
Decode Strategy	General 🔹			
			ОК	Cancel

<u>Step 2</u> In the **Channel** list, select the channel that you want to modify settings for.

<u>Step 3</u> Click **OK** to save the settings.

• To delete one or more added devices, do the following:

 $\diamond$  Click  $\square$  to delete one device.

Select the checkbox of the devices that you want to delete, and then click **Delete**.

### 5.6.1.5 Modifying IP Address

You can modify a single IP address or multiple IP addresses of remote devices at one time.

You can only modify the IP address of initialized cameras.

• To modify a single IP address, do the following:

<u>Step 1</u> In the Searched Device list area, click for the device that you want to modify IP.

Figure 5-96 Modify IP

Modify IP	
Selected Device Quantity: 1	
O DHCP	admin
• Static	
IP Address	
Subnet Mask	
Default Gateway	
1 SN IP Address	
1 systemative states	
OK Cancel	

<u>Step 2</u> Configure the settings for IP address, subnet mask, default gateway, user name, and password.

<u>Step 3</u> Click **OK** to save the settings.

1

- To modify IP address in batches, do the following:
- <u>Step 1</u> In the Searched Device list area, select the devices that you want to modify IP address in batches.

Step 2	Click	
JUCP Z	Cher	2

Modify IP		
Selected Device Quantity: 4		
⊖ DHCP		admin
◯ Static		
IP Address	]	Incremental Value 1
Subnet Mask		
Default Gateway		
4 SN	IP Address	
1 specific age in		
2		
3		
4		
OK Cancel		

<u>Step 3</u> Set incremental value.

 $\square$ 

The system will add the incremental value to the fourth segment of IP addresses of selected devices.

<u>Step 4</u> Configure the settings for start IP address (the IP address is allocated in sequence), subnet mask, default gateway, user name, and password.

<u>Step 5</u> Click **OK** to save the settings.

### 5.6.1.6 Exporting IP Address

You can export the added IP address to the USB storage device.

The exported information is saved in .csv file, which includes IP address, port number, channel number, manufacturer, user name, and password.

- <u>Step 1</u> Insert the USB storage device to the USB port of the Device.
- Step 2 Click Export.

wse					
Device Name	sdb1(USB USB)		Refresh Form	nat	
	7.51 GB				
	0.00 KB

🗅 System Volume	Information			<b> </b>	
				ā	
📄 snapPic				<b> </b>	
Backup Encryption					
New Folder				OK B	ack

Figure 5-98 Browse

- <u>Step 3</u> Configure the save path.
- <u>Step 4</u> Click **OK** to save the settings.

A pop-up message indicating "Successfully exported" is displayed.

Step 5 Click OK.

When exporting IP address, the **Backup Encryption** checkbox is selected by default. The file information includes IP address, port, channel number, manufacturer, user name, and password.

- If you select the **Backup Encryption** checkbox, the file format is .backup.
- If you clear the **Backup Encryption** checkbox, the file format is .csv. In this case, there might be a risk of data leakage.

### 5.6.1.7 Importing IP Address

You can add remote devices by importing IP address information.

<u>Step 1</u> Insert the USB storage device to the USB port of the Device.

#### Step 2 Click Import.

	_				
owse					
Device Name	sdb1(USB USB)	• I	Refresh Fo	rmat

				ā	
				ā	
New Folder				OK Ba	ack

Figure 5-99 Browse

- <u>Step 3</u> Select the file that you want to import.
- <u>Step 4</u> Click **OK** to start importing.

After importing is completed, a pop-up message indicating "The import succeeded" is displayed.

If the IP address that you want to import already exists in the Device, the system will pop up a message to ask you whether to overwrite the existing content.

- Click OK to replace the existing one.
- Click Cancel to add it as a separate device in the Added Device area.

- You can edit the exported .csv file and be cautious not to change the file format; otherwise the file cannot be imported as it will be judged as invalid.
- The language of .csv file must match the Device language.
- The import and export through customized protocol is not supported.

## 5.6.2 Managing Remote Devices

You can view the status of remote devices and upgrade.

### 5.6.2.1 Viewing Status

You can view the device information such as connection status, IP address, motion detection, video loss detection, camera name, and manufacturer.

Select Main Menu > CAMERA > Camera List > Status.

### 5.6.2.2 Viewing Firmware Information

You can view the device firmware information such as channel number, IP address, manufacturer, system version, video input, audio input, and alarm in.

Select Main Menu > CAMERA > Camera List > Firmware.

Figure 5-100 Firmware

CAMERA		<b>E</b> 🛞	🚔 🍫 🛡 🌡	2 <sub>¢</sub>	LIVE 🕹 🕒 🗸 開

### 5.6.2.3 Upgrading Remote Devices

<u>Step 1</u> Select Main Menu > CAMERA > Camera List > Update.

Figure 5-101 Update

I	CAMERA		3	🚔 🍫 🖲	⊅ 💄₀	LIVE 🕹 🕒 🛱
					Update	
						None 🔻
		Channel		IP Address	System Version	Status
					File Update Manual	Check Online Update

<u>Step 2</u> Upgrade the device.

- File Update
- 1) Insert a USB storage device containing the upgrade files into the USB port of the Device.
- 2) Select the devices that you want to upgrade.
- 3) Click **File Update**.
  - The **File Update** page is displayed.
- 4) Select the upgrading files and click **Apply**.
- Online Update
- 1) Click **Detect** or select the checkbox the device that you want to upgrade and click **Manual Check**.

The system starts detecting if there is a new version on the online server.

- 2) Select the checkbox of all the devices that have new version.
- 3) Click **Online Update**.

- The system will pop up a message to indicate if the upgrading is successful.
- You can use the Type list to filter the devices so that you can find the devices quickly.

# 5.7 Configuring Record Settings

You can record video manually or automatically and configure the recording settings to main stream and sub stream respectively.

## 5.7.1 Enabling Record Control

## $\wedge$

- Manual recording operation requires the user have the permission to access **STORAGE** settings.
- Check to ensure the HDD installed in the Device has been formatted properly.

To enter the record control page, do the following:

<u>Step 1</u> Right-click on the live view screen, the shortcut menu is displayed. On the shortcut menu, select **Manual Control > Record Control**.

Figure 5-102 Record mode

Re	cord Mode									
	Main Stream	All								
	Manual									
	Off									
	Sub Stream									
	Manual									
	Off									
	On									
	Off									
								Apply	Back	

<u>Step 2</u> Configure the settings for the record control parameters.

Table 5-24 Record control parameters

Parameter	Description							
Channel	Displays all the analog channels and the connected digital channels. You can							
Channel	select a single channel or select All.							
	• Auto: Automatically record according to the record type and recording							
Main Stream/Sub	time as configured in the recording schedule.							
Stream	• Manual: Keep general recording for 24 hours for the selected channel.							
	• Stop: Do not record.							
Snapshot	Enable or disable the scheduled snapshot for the corresponding channels.							

Step 3 Click Apply.

## 5.7.2 Configuring Recorded Video Storage Schedule

You need to configure the storage schedule for the recorded video so that the recorded video can be saved. For details, see "5.1.4.9 Configuring Recorded Video Storage Schedule."

# 5.8 Configuring Snapshot Settings

## 5.8.1 Configuring Snapshot Trigger

The snapshot is divided into scheduled snapshot, event triggered snapshot, and face detection triggered snapshot. When the both are enabled, the event triggered snapshot has the priority.

- If there is no alarm event, the system performs scheduled snapshot.
- If there is any alarm event, the system performs event triggered snapshot.

### 5.8.1.1 Configuring Scheduled Snapshot

- <u>Step 1</u> Right-click on the live view screen, the shortcut menu is displayed.
- <u>Step 2</u> On the shortcut menu, select **Manual Control > Record Control**.
- <u>Step 3</u> In the **Snapshot** area, enable the snapshot for the channels if needed.

#### Figure 5-103 Enable snapshot

Main Stream       All       1       2       3       4       5       6       7       8         Auto       Image: Constraint of the stream         Auto       Image: Constraint of the stream         Auto       Image: Constraint of the stream         On       Image: Constraint of the stream         On       Image: Constraint of the stream         On       Image: Constraint of the stream         On       Image: Constraint of the stream         On       Image: Constraint of the stream       Image: Constraint of the stream       Image: Constraint of the stream       Image: Constream	Main Stream	All

<u>Step 4</u> Click **Setting** next to **Picture Storage** checkbox and select the corresponding channel <u>Step 5</u> Click **Apply**.

## 5.8.2 Configuring Snapshot Storage Schedule

You need to configure the storage schedule for the snapshot so that the snapshot can be saved. For details, see "5.1.4.10 Configuring Snapshot Storage Schedule."

## 5.8.3 Backing up Snapshots to FTP

<u>Step 1</u> Select Main Menu > STORAGE > FTP.

Figure 5-107 FTP

<u>Step 2</u> Enable the FTP function and configure the parameters. For details, see "5.18.9 Configuring FTP Storage Settings."

The snapshots will be uploaded to FTP for backup.

# 5.9 Playing Back Video

## 5.9.1 Enabling Record Control

- Manual recording operation requires the user have the permission to access **STORAGE** settings.
- Check to ensure the HDD installed in the Device has been formatted properly.

To enter the record control page, do the following:

<u>Step 1</u> Right-click on the live view screen, the shortcut menu is displayed. On the shortcut menu, select **Manual Control > Record Mode**.

Figure 5-108 Record mode

ord Mode			
Main Stream	All		
Manual			
Off			
Sub Stream			
Manual			
Off			
On			
Off			
			Apply

<u>Step 2</u> Configure the settings for the record control parameters.

Table 5-25	Record	control	parameters
	necoru	control	parameters

Parameter	Description		
Channel	Displays all the analog channels and the connected digital channels. You can		
Channel	select a single channel or select All.		
	• Auto: Automatically record according to the record type and recording		
Main Stream/Sub	time as configured in the recording schedule.		
Stream	• Manual: Keep general recording for 24 hours for the selected channel.		
	• Stop: Do not record.		
Snapshot	Enable or disable the scheduled snapshot for the corresponding channels.		

## 5.9.2 Instant Playback

You can use the instant playback function to play back the previous five minutes to sixty minutes of the recorded video in any channel. For details about instant playback function, see "5.2.2.1 Instant Playback."

## 5.9.3 Video Playback

You can search for and play back the recorded video saved on the Device. Select Main Menu > Search.

Figure 5-109 Video search

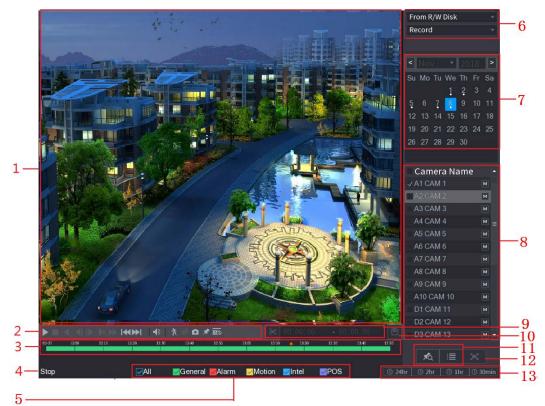

Figure 5-110 Video search description

No.	Function	Description						
1	Display Window	Display the searched recorded video or picture. Supports simultaneously playing in single-channel, 4-channel, 9-channel, and 16-channel. When playing back in a single channel, click and hold to select the area that you want to enlarge. The area is enlarged after the left mouse button is released. To exit the enlarged status, right-click on the image.						
2	Playback Controls	Playback control buttons. For details about the control buttons, see						
2	Bar	"5.9.3.1 Introducing Playback Controls."						

No.	Function	Description						
3	Time Bar	<ul> <li>Display the type and time period of the current recorded video.</li> <li>In the 4-channel layout, there are four time bars are displayed; in the other view layouts, only one time bar is displayed.</li> <li>Click on the colored area to start playback from a certain time.</li> <li>In the situation when you are configuring the settings, rotate the wheel button on the time bar, the time bar is zooming in from 0. In the situation when playback is ongoing, rotate the wheel button on the time bar, the time bar is zooming from the time point where the playback is located.</li> <li>Time bar colors: Green indicates general type; Red indicates external alarm; Yellow indicates motion detection; Blue indicates intelligent events; Purple indicates POS events.</li> <li>For some models, when you are clicking on the blank area in the time bar, the system automatically jumps to the next time point where there is a recorded video located.</li> <li>Click and hold the time bar, and the mouse pointer shall change to a hand icon, and then you can drag to view the playback of the target time.</li> <li>You can drag the vertical orange line on the time bar to rapidly view the playback in iframe format.</li> <li>When playing back video in one channel mode, you can move mouse pointer to time bar to display thumbnail pictures for the video of target time.</li> <li>When playing back video, you can select other channels as needed. The time bar of newly added channels will be added up to the time bar of earlier base channels. The type and time period of newly added channels are the same with early base channels.</li> </ul>						
4	Play Status	Includes two playback status: <b>Play</b> and <b>Stop</b> .						
5	Record type	Select the checkbox to define the recording type to search for.						
6	Search type	Select the content to play back: <b>Record</b> , <b>Picture</b> , <b>Subperiod</b> . For details about the selecting search type, see "5.9.3.2 Selecting Search Type."						
7	Calendar	Click the date that you want to search, the time bar displays the corresponding record. The dates with record or snapshot have a small solid circle under the date.						

No.	Function	Description			
8	View Layout and Channel Selection	<ul> <li>In the Camera Name list, select the channel(s) that you want to play back.</li> <li>The window split is decided by how you select the channel(s). For example, if you select one channel, the playback is displayed in the single-channel view; if you select two to four channels, the playback is displayed in the four-channel view. The maximum is eight channels.</li> <li>Click I to switch the streams. I indicates main stream, and I indicates sub stream.</li> </ul>			
9	Video Splice	Splice a section of recorded video and save it. For details about splicing a recorded video, see "5.9.3.3 Clipping Recorded Video."			
10	Backup	Back up the recorded video files. For details, see "5.9.3.4 Backing up Recorded Video."			
11	List Display	<ul> <li>This area includes Tag List and File List.</li> <li>Click the Tag List button, the marked recorded video list is displayed. Double-click the file to start playing.</li> <li>Click the File List button, the searched recorded video list is displayed. You can lock the files. For details, see "5.9.9 Using the File List."</li> </ul>			
12	Full Screen       Click I to display in full screen. In the full screen mode, point to the bottom of the screen, the time bar is displayed. Right-click on the screen to exit full screen mode.				
13	You can select 24hr, 2hr, 1hr, or 30min as the unit of tim				

## 5.9.3.1 Introducing Playback Controls Bar

You can perform the operations such as control the speed of playback, add mark, and take snapshots through the playback controls bar.

Figure 5-111 Playback control bar

The play backward function and playback speed are dependent on the product version. The actual product shall govern. You can also contact the technical support to consult the hardware version information.

Table 5-26 Playback control bar description

### 5.9.3.2 Selecting Search Type

You can search the recorded videos, splice, or snapshots from HDD or external storage device.

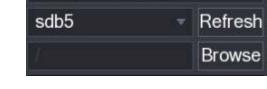

- From R/W Disk: Recorded videos or snapshots playback from HDD of the Device.
  - Figure 5-112 From R/W disk

• From I/O Device: Recorded videos playback from external storage device. Click Browse, select the save path of recorded video file that you want to play. Double-click the

From I/O Device

### 5.9.3.3 Clipping Recorded Video

During playback, clip sections of recorded video and save to the USB storage device. Figure 5-114 Clip

<u>Step 1</u> Select a recorded video that you want to play.

- Click local to start playing from the beginning.
- Double-click anywhere in the time bar colored area to start playback.

Step 2 Click on the time bar to select the start time, and then click 📉 to start clipping.

<u>Step 3</u> Click on the time bar to select the end time, and then click 🔀 to stop clipping.

- You can clip the video of a single-channel or multiple channels.
- Maximum 1024 files can be backed up at one time.
- The files that are selected in the File List cannot be clipped.

## 5.9.3.4 Backing up Recorded Video

You can back up the recorded video file or splice video file into the USB storage device.

- <u>Step 1</u> Select the recorded video file that you want to back up. You can select the following two types of files:
  - Recorded video file: Click I, the File List area is displayed. Select the file(s) that you want to back up.
  - Splice video file. For details about splicing video file, see "5.9.3.3 Clipping Recorded Video."

Step 2 Click

Figure 5-115 Backup

Step 3 Click Backup.

If you do not want to back the file, clear the checkbox.

# 5.9.4 Smart Search

During playback, you can analyze a certain area to find if there was any motion detection event occurred. The system will display the images with motion events of the recorded video.

Ш

Not all models support this function.

To use the Smart Search function, you need to enable the motion detection for the channel by selecting Main Menu > ALARM > Video Detection > Motion Detection.

To use the Smart Search function, do the following:

- <u>Step 1</u> Select **Main Menu > SEARCH**, the video search page is displayed.
- <u>Step 2</u> In the **Camera Name** list, select the channel(s) that you want to play.
- <u>Step 3</u> Click or double-click anywhere in the time bar colored area to start playback.

Step 4 Click

The grid is displayed on the screen.

 $\square$ 

- Only single-channel supports smart search.
- If multi-channels are selected, double-click on the channel window to display this channel only on the screen, and then you can start using smart search function.

<u>Step 5</u> Drag the pointer to select the searching area.

The grid area supports  $22 \times 18$ (PAL) and  $22 \times 15$ (NTSC).

<u>Step 6</u>

Click 💷 to add filter criteria. You can check **Human** box, **Vehicle** box, or uncheck.

- Human: Display the motion alarm of human during selected time and searching area.
- Vehicle: Display the motion alarm of vehicle during selected time and searching area.
- Unchecking: Display the general motion alarm which includes both human and vehicle, during selected time and searching area.

# Step 7 Click

 $\square$ 

The screen starts playing back the motional splices of recorded video for the selected searching area.

<u>Step 8</u> Click to exit the smart searching while playback.

# 5.9.5 Showing AI Rule during Playback

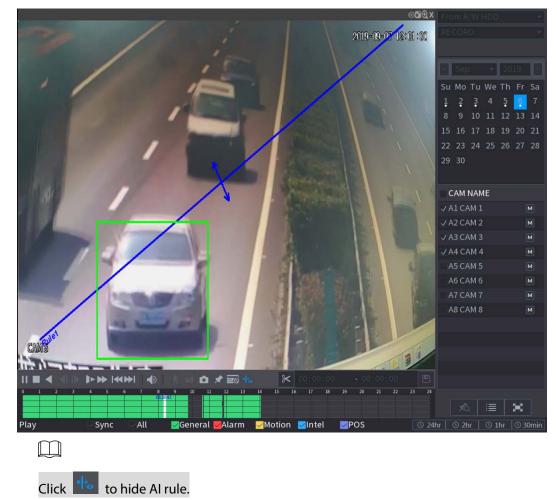

To use the AI rule showing function, do the following:

- <u>Step 1</u> Select Main Menu > SEARCH.
- <u>Step 2</u> In the **Camera Name** list, select the channel(s) that you want to play.
- <u>Step 3</u> Click c or double-click anywhere in the time bar colored area to start playback.

You can see the AI rule during playback. This function is enabled by default.

Figure 5-116 Playback

# 5.9.6 Marking and Playing Back Video

You can mark the recording for somewhere important. Then you can easily find the marked recording by searching time and mark name.

### Marking a Video

- <u>Step 1</u> Select Main Menu > SEARCH.
- Step 2 In the playback mode, click

Figure 5-117 Add tag

<u>Step 3</u> In the **Tag Name** box, enter a name.

Step 4 Click OK.

This marked video file displays in the Tag List.

#### Playing Back Marked Video

#### 

This function is supported on single-channel playback.

<u>Step 1</u> In the **Camera Name** list, select one channel.

Step 2 Click

Figure 5-118 Mark list

00 : 00 : 00	Q
1	
Tag Time Name	
<b>1</b> 1:29:14 uuuu	
11:43:55 errt	
Tag Name	
Interval Before Tag	
0	sec.
*	5

<u>Step 3</u> Double-click the file that you want to play back.

To search the marked video by time, in the SEARCH box on the top of the page, enter the

time, and then click

#### Playing Back Time before the Tag

You can configure to play N seconds of the tagged video before the tagged time.

- <u>Step 1</u> In the **Tag Name** box, enter the name of a tagged video.
- <u>Step 2</u> In the Interval Before Tag box, enter N seconds.

Step 3 Click

The playback starts from N seconds before the tagged time.

#### $\square$

If there is N seconds exist before the marked time, the playback starts from N seconds before the tagged time. If there is not, it plays back as much as there is.

#### Managing Tagged Video

On the **Tag List** page, click 🗖

Figure 5-119 Tag management

Tag Management							
Channel	8 ,						
Start Time	2020-01-04	00:00:00					
End Time	2020-01-05	00:00:00		Search			
2 CH	Tag Time		Tag Name				
	2020-01-04	11:29:14					
	2020-01-04	11:43:55	errt				
Delete				Cancel			

- Be default, it manages all the tagged videos of the selected channel.
- To search the tagged video, select channel number from the **Channel** list, enter time in **Start Time** box and **End Time** box, and then click **Search**.
- All the tagged videos display in time order.
- To modify the name of tagged video, double-click a tagged video.
- To delete the marked video, select the tagged video, and then click **Delete**.

#### $\square$

After opening the **Tag Management** page, the playback will pause until exiting this page. If the marked video that was in playing back is deleted, the playback will start from the first tagged video in the **Tag List**.

# 5.9.7 Playing Back Snapshots

You can search and play back the snapshots.

- <u>Step 1</u> Select Main Menu > SEARCH.
- <u>Step 2</u> In the **Search Type** list, select **Picture**.
- <u>Step 3</u> In the **Channel** list, select a channel number.

Step 4 In the Calendar area, select a date.

Step 5 Click

The system starts playing snapshots according to the configured intervals.

# 5.9.8 Playing Back Splices

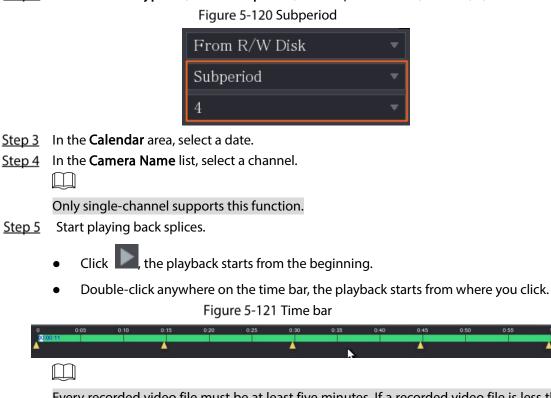

Ш

You can clip the recorded video files into splices and then play back at the same time to save your time.  $\square$ 

Not all models support this function.

Step 1 Select Main Menu > SEARCH.

<u>Step 2</u> In the Search Type list, select Subperiod; In the Split Mode list, select 4, 9, or 16.

Every recorded video file must be at least five minutes. If a recorded video file is less than 20 minutes but still choose to split into four windows, the system will automatically adjust the windows quantity to ensure every splice is more than five minutes, and in this case it is possible that there are no images are displaying in some windows.

## 5.9.9 Using the File List

 $\square$ 

You can view all the recorded videos within a certain period from any channel in the File List.

- <u>Step 1</u> Select Main Menu > VIDEO.
- Step 2 Select a channel(s).

Step 3 Click

#### Figure 5-122 File list

	Click <b>Setting</b> to display setting page.
	• Local Alarm: Enable alarm activation through the alarm devices
	connected to the selected output port.
Alarm-out Port	• Extension Alarm: Enable alarm activation through the connected
	alarm box.
	• Wireless Siren: Enable alarm activation through devices connected
	by USB gateway or camera gateway.
	Set a length of time for the Device to delay turning off alarm after the
Post-Alarm	external alarm is cancelled. The value ranges from 0 seconds to 300
	seconds, and the default value is 10 seconds.
Charry Marganese	Select the <b>Show Message</b> checkbox to enable a pop-up message in your
Show Message	local host PC.
	Select the <b>Report Alarm</b> checkbox to enable the system to upload the
Report Alarm	alarm signal to the network (including alarm center) when an alarm event
	occurs.
	Select the Send Email checkbox to enable the system to send an email
Send Email	notification when an alarm event occurs.
	To use this function, make sure the email function is enabled in Main
	Menu > NETWORK > Email.
	Select the channel(s) that you want to record. The selected channel(s)
	starts recording after an alarm event occurs.
Record Channel	The recording for local alarm recording and auto recording must be
	enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage
	Schedule" and "5.9.1 Enabling Record Control."
	Click <b>Setting</b> to display the PTZ page.
PTZ Linkage	Enable PTZ linkage actions, such as selecting the preset that you want to
	be called when an alarm event occurs.
	Set a length of time for the Device to delay turning off recording after the
Post Record	alarm is cancelled. The value ranges from 10 seconds to 300 seconds, and
	the default value is 10 seconds.
Tour	Select the <b>Tour</b> checkbox to enable a tour of the selected channels.
	Select the <b>Snapshot</b> checkbox to take a snapshot of the selected channel.
Picture Storage	To use this function, select Main Menu > CAMERA > Encode > Snapshot,
	in the <b>Type</b> list, select <b>Event</b> .
	Select the checkbox to enable the function. When an alarm event occurs,
	the extra screen outputs the settings configured in Main Menu >
	DISPLAY > Tour Setting > Sub Screen.
Sub Screen	
	<ul> <li>Not all models support this function.</li> </ul>
	<ul> <li>To use this function, extra screen shall be enabled.</li> </ul>

Parameter	Description					
	Select the checkbox to enable the function. When an alarm event occurs,					
	the video output port outputs the settings configured in Main Menu >					
Video Matrix	DISPLAY > Tour Setting.					
	Not all models support this function.					
Buzzer	Select the checkbox to activate a buzzer noise at the Device.					
Log	Select the checkbox to enable the Device to record a local alarm log.					
Disarming	After enabling this function, you can connect a switch to the alarm input					
Disarming	port for disarming control.					

<u>Step 3</u> Click **Apply** to complete the settings.

- Click **Default** to restore the default setting.
- Click **Copy to**, in the **Copy to** dialog box, select the additional channel(s) that you want to copy the local alarm settings to, and then click **Apply**.

### 5.10.2.2 Configuring Alarms from Alarm Box

You can connect the alarm box to the RS-485 port of the Device. When the alarm is detected by the alarm box, the alarm information will be uploaded to the Device, and then the Device outputs the alarms in the way that you configure in this section.

<u>Step 1</u> Select Main Menu > ALARM > Alarm-in Port > Alarm Box.

Figure 5-126 Alarm box

 $\square$ 

- Click **Default** to restore the default setting.
- Click **Copy to**, in the **Copy to** dialog box, select the additional channel(s) that you want to copy the motion detection settings to, and then click **Apply**.
- Click **Test** to test the settings.

#### Setting the Motion Detection Region

- <u>Step 1</u> Next to **Region**, click **Setting**.
- <u>Step 2</u> Point to the middle top of the page.

Figure 5-135 Detection setting

<u>Step 3</u> Configure the regions settings. You can configure totally four regions.

- 1) Select one region, for example, click **1**.
- Drag on the screen to select the region that you want to detect. The selected area shows the color that represents the region.
- 3) Configure the parameters.

Table 5-32 Motion detection parameters

Parameter	Description
Name	Enter a name for the region.
Consitivity	Every region of every channel has an individual sensitivity value.
Sensitivity	The bigger the value is, the easier the alarms can be activated.
Threshold	Adjust the threshold for motion detect. Every region of every channel has an
Threshold	individual threshold.

When anyone of the four regions activates motion detect alarm, the channel where this region belongs to will activate motion detect alarm.

- <u>Step 4</u> Right-click on the screen to exit the region setting page.
- <u>Step 5</u> On the **Motion Detection** page, click **Apply** to complete the settings.

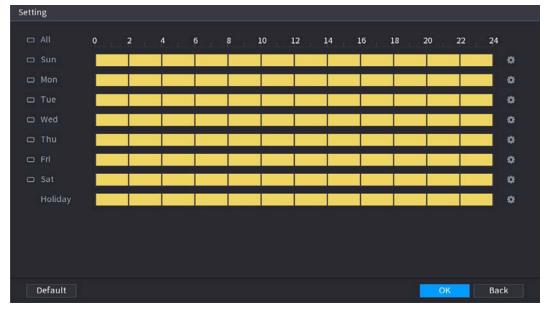

#### **Setting Motion Detection Period**

•

The system only activates the alarm in the defined period.

<u>Step 1</u> Next to Schedule, click Setting.

Figure 5-136 Setting

<u>Step 2</u> Define the motion detection period. By default, it is active all the time.

- Define the period by drawing.
  - ◇ Define for a specified day of a week: On the timeline, click the half-hour blocks to select the active period.
  - ♦ Define for several days of a week: Click 🛄 before each day, the icon switches to

. On the timeline of any selected day, click the half-hour blocks to select the

active periods, all the days with 📟 will take the same settings.

♦ Define for all days of a week: Click All, all 🔲 switches to 🔤. On the timeline of

any day, click the half-hour blocks to select the active periods, all the days will take the same settings.

• Define the period by editing. Take Sunday as an example.

1)	Click	\$
- /		

Period					
Day					
Period 1	00 : 00	- 11: 30			
Period 2	12 : 00	- 24 : 00			
Period 3	00:00	- 24 : 00			
Period 4	00 : 00	- 24 : 00			
Period 5	00:00	- 24 : 00			
Period 6	00 : 00	- 24 : 00			
Copy to					
🔲 All					
🗹 Sun					
				OK	Back

- 2) Enter the time frame for the period, and then select the checkbox to enable the settings.
  - $\diamond$  There are six periods for you to set for each day.
  - ◇ Under Copy to, select All to apply the settings to all the days of a week, or select specific day(s) that you want to apply the settings to.
- 3) Click **OK** to save the settings.
- <u>Step 3</u> On the **Motion Detection** page, click **Apply** to complete the settings.

### 5.10.4.2 Configuring Video Loss Settings

When the video loss occurs, the system activates the alarm.

<u>Step 1</u> Select Main Menu > ALARM > Video Detection > Video Loss.

- <u>Step 2</u> To configure the settings for the video loss detection parameters, see"5.10.4.1 Configuring Motion Detection Settings."
  - $\square$

For PTZ activation, different from motion detection, the video loss detection can activate PTZ preset, tour, and pattern.

- <u>Step 3</u> Click **Apply** to complete the settings.
  - $\square$
  - Click **Default** to restore the default setting.
  - Click Copy to, in the Copy to dialog box, select the additional channel(s) that you want to copy the motion detection settings to, and then click Apply.

### 5.10.4.3 Configuring Tampering Settings

When the camera lens is covered, or the video is displayed in a single color because of the causes such as sunlight status, the monitoring cannot be continued normally. To avoid such situations, you can configure the tampering alarm settings.

<u>Step 1</u> Select Main Menu > ALARM > Video Detection > Video Tampering.

	5	1 5		
Motion Detection	Video Loss Video Tampering	Video Quality An		
Channel				
		Sensitivity		]
	Setting	CAM AntiDither	0	sec.

Figure 5-139 Video tampering

<u>Step 2</u> To configure the settings for the tampering detection parameters, see"5.10.4.1 Configuring Motion Detection Settings."

```
\square
```

For PTZ activation, different from motion detection, the video loss detection can activate PTZ preset, tour, and pattern.

- Step 3 Click **Apply** to complete the settings.
  - Click **Default** to restore the default setting.
  - Click **Copy to**, in the **Copy to** dialog box, select the additional channel(s) that you want to copy the motion detection settings to, and then click **Apply**.

# 5.10.5 System Events

You can configure the alarm output for three types of system event (HDD, Network, and User). When there is an abnormal system event occurs, the system activates alarms in the way that you configure in this section.

### 5.10.5.1 Configuring HDD Event Settings

<u>Step 1</u> Select Main Menu > ALARM > Exception > Disk.

Figure 5-140 Disk

Disk	Network		
DISK	Network		
Event Type	No Disk		
Enable			
Alarm-out Port	Setting	Post-Alarm 1	0 sec.
Show Message	🗌 Report Alarm	Send Email	
🗌 Buzzer	🔽 Log		
🗌 Alarm Tone	None		
			Apply Back

<u>Step 2</u> Configure the settings for the HDD event.

Parameter	Description
Event Type	In the Event Type list, select No Disk, Disk Error, or Low Space as the event
Lvent type	type.
Enable	Enable or disable the HDD event detection function.
	Click <b>Setting</b> to display setting page.
	• Local Alarm: Enable alarm activation through the alarm devices
	connected to the selected output port.
Alarm-out Port	• Extension Alarm: Enable alarm activation through the connected alarm
	box.
	• Wireless Siren: Enable alarm activation through devices connected by
	USB gateway or camera gateway.
	Set a length of time for the Device to delay turning off alarm after the external
Post-Alarm	alarm is cancelled. The value ranges from 10 seconds to 300 seconds, and the
	default value is 10 seconds.
Show Message	Select the <b>Show Message</b> checkbox to enable a pop-up message in your local
Show Message	host PC.
Donort Alarma	Select the Report Alarm checkbox to enable the system to upload the alarm
Report Alarm	signal to the network (including alarm center) when an alarm event occurs.
	Select the Send Email checkbox to enable the system to send an email
	notification when an alarm event occurs.
Send Email	
	To use this function, make sure the email function is enabled in Main Menu >
	NETWORK > Email.
Buzzer	Select the checkbox to activate a buzzer noise at the Device.

Parameter	Description
Log	Select the checkbox to enable the Device to record a local alarm log.
Alarm Tone	Select to enable audio broadcast/alarm tone in response to a HDD alarm
Alarm Tone	event.

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.10.5.2 Configuring Network Event Settings

#### <u>Step 1</u> Select Main Menu > ALARM > Exception > Network.

<u>Step 2</u> Configure the settings for the Network event.

Table 5-34 Network event settings

Parameter	Description
Event Type	In the Event Type list, select Offlice, IP Conflict, or MAC Conflict as the event
Event Type	type.
Enable	Enable or disable the Network event detection function.
	Click <b>Setting</b> to display setting page.
	General Alarm: Enable alarm activation through the alarm devices
	connected to the selected output port.
Alarm-out Port	• External Alarm: Enable alarm activation through the connected alarm
	box.
	• Wireless Siren: Enable alarm activation through devices connected by
	USB gateway or camera gateway.
	Set a length of time for the Device to delay turning off alarm after the external
Post-Alarm	alarm is cancelled. The value ranges from 10 seconds to 300 seconds, and the
	default value is 10 seconds.

Parameter	Description
Show Massaga	Select the <b>Show Message</b> checkbox to enable a pop-up message in your local
Show Message	host PC.
	Select the Send Email checkbox to enable the system to send an email
	notification when an alarm event occurs.
Send Email	
	To use this function, make sure the email function is enabled in Main Menu >
	NETWORK > Email.
Buzzer	Select the checkbox to activate a buzzer noise at the Device.
Log	Select the checkbox to enable the Device to record a local alarm log.
Post Record	Continue to record for some time after the alarm is ended. The value ranges
Post Record	from 10 seconds to 300 seconds.
Alarm Tone	Select to enable audio broadcast/alarm tones in response to a network alarm
	event.

<u>Step 3</u>	Click <b>Apply</b> to complete the settings.
---------------	--

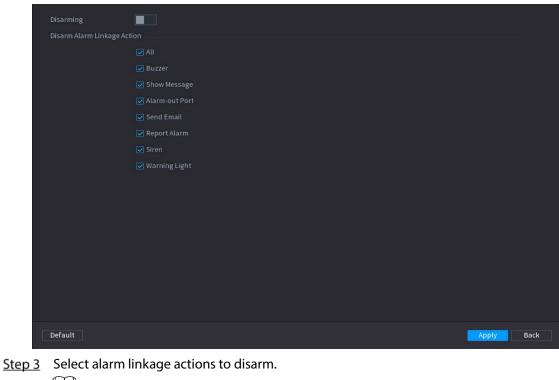

# 5.10.6 Configuring Disarming

You can disarm all alarm linkage actions as needed.

```
<u>Step 1</u> Select Main Menu > ALARM > Disarming.
```

<u>Step 2</u> Click to enable disarming.

#### Figure 5-142 Disarming

All alarm linkage actions will be disarmed when you select All.

Step 4 Click Apply.

# 5.11 Al Function

# 5.11.1 Configuring Al Mode

To use AI functions, you need to enable the corresponding AI mode.

<u>Step 1</u> Select Main Menu > AI > Parameters > AI Mode.

Figure 5-143 Al mode

Al Mode	Face	
	SMD	
	Face	
	IVS&SMD	

#### Step 2 Select an Al mode

- When SMD is selected, only SMD is available.
- When Face is selected, only face detection and face recognition are available.
- When IVS&SMD is selected, only IVS and SMD are available.

Ш

SMD, face detection, face recognition and IVS cannot be enabled simultaneously.

# 5.11.2 For Pro Al Series

 $\square$ 

The faces are fuzzily processed to comply with relevant regulations.

Al module provides face detection, face recognition, IVS functions, and video structuring. These functions take effect after they are configured and enabled. It adopts deep learning and can realize precision alarms.

- Face detection: The Device can analyze the faces captured by the camera and link the configured alarms.
- Face recognition: The Device can compare the captured faces with the face database and then link the configured alarms.
- IVS: The IVS function processes and analyzes the human and vehicle images to extract the key information to match with the preset rules. When the detected behaviors match with the rules, the system activates alarms. The IVS function can avoid wrong alarms by filtering the factors such as rains, light, and animals.
- Video structuring: The device can detect and extract key features from the human bodies and non-motor vehicles in the video, and then build a structured database. You can search any target you need with these features. For example, you can search any people who wears yellow short sleeve shirt. See more details in "5.11.1.4 Video Structuring."

## 5.11.2.1 Face Detection

The Device can analyze the pictures captured by the camera to detect whether the faces are on the pictures. You can search and filter the recorded videos the faces and play back.

 $\square$ 

If you select AI by device, then among face detection and recognition, IVS function, and video structuring, you can use one of them at the same time for the same channel.

Figure 5-144 Face detection

#### 5.11.2.1.1 Configuring Face Detection Parameters

The alarms are generated according to the configured parameters.

```
<u>Step 1</u> Main Menu > Al > Parameters > Face Detection.
```

Channel	1		•			
Enable			Rı	ıle	View Setting	g
Schedule	Setti	ing				
Alarm-out Po	rt Setti	ing	Po	ost-Alarm	10	sec.
Show Mes	sage 🔽 Rep	oort Alarm		] Send Email		
🔽 Record Cl	nannel 12					
PTZ Linkage	Setti	ing	Po	ost-Record	10	sec.
🗌 Tour						
Picture St	orage 12					
Sub Scree	en 🗌 Buz	zer 🔽 Log	5			
🗌 Alarm Toi	ne None					
White Lig	ht 📃 Sire	in				

<u>Step 2</u> In the **Channel** list, select a channel that you want to configure face detection function, and

then enable it.

<u>Step 3</u> Configure the parameters.

Table 5-35 Face detection parameters

Parameter	Description
	You can select from AI by Camera and AI by Device.
	• Al by Camera: This option requires certain Al cameras. The camera
Туре	will do all the AI analysis, and then give the results to the DVR.
	• Al by Device: The camera only transmits normal video stream to the
	DVR, and then the DVR will do all the AI analysis.

Parameter	Description				
	Click <b>View Setting</b> to draw areas to filter the target.				
	You can configure two filtering targets (maximum size and minimum				
Rule	size). When the target is smaller than the minimum size or larger than				
	the maximum size, no alarms will be activated. The maximum size should				
	be larger than the minimum size.				
	Define a period during which the detection is active.				
Schedule	For details, see "Setting Motion Detection Period" section in "5.10.4.1				
	Configuring Motion Detection Settings."				
	Click <b>Setting</b> to display setting page.				
	• General Alarm: Enable general alarm and select the alarm output				
	port.				
Alarm-out Port	• Ext. Alarm: Connect the alarm box to the Device and then enable it.				
	Wireless Siren: Connect the wireless gateway to the Device and then				
	enable it. For details, see "5.12 IoT Function."				
	When an alarm event occurs, the system links the peripheral alarm devices				
	connected to the selected output port.				
	Set a length of time for the Device to delay turning off alarm after the				
Post-Alarm	external alarm is cancelled. The value ranges from 0 seconds to 300				
	seconds. If you enter 0, there will be no delay.				
Show Message	Select the <b>Show Message</b> checkbox to enable a pop-up alarm message				
Show Message	in your local host PC.				
	Select the <b>Report Alarm</b> checkbox to enable the system to upload the				
	alarm signal to the network (including alarm center) when an alarm				
	event occurs.				
Report Alarm					
	<ul> <li>Not all models support this function.</li> </ul>				
	• The corresponding parameters in the alarm center should be				
	configured. For details, see "5.15.1.12 Configuring Alarm Center				
	Settings."				
	Select the <b>Send Email</b> checkbox to enable the system to send an email				
	notification when an alarm event occurs.				
Send Email					
	To use this function, make sure the email function is enabled in <b>Main</b>				
	Menu > NETWORK > Email.				
	Select the channel(s) that you want to record. The selected channel(s)				
	starts recording after an alarm event occurs.				
Record Channel					
	The recording for intelligence event and auto recording function must be				
	enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage				
	Schedule" and "5.9.1 Enabling Record Control."				

Parameter	Description
	Click <b>Setting</b> to display the PTZ page.
	Enable PTZ linkage actions, such as selecting the preset that you want to
	be called when an alarm event occurs.
PTZ Linkage	
	To use this function, the PTZ operations must be configured. For details,
	see "5.4 Controlling PTZ Cameras."
Post Record	Set a length of time for the Device to delay turning off recording after
Post Record	the alarm is cancelled. The value ranges from 10 seconds to 300 seconds.
	Select the <b>Tour</b> checkbox to enable a tour of the selected channels.
_	
Tour	• To use this function, the tour setting must be configured.
	• After the tour is ended, the live view screen returns to the view layout
	before tour started.
	Select the <b>Picture Storage</b> checkbox to take a snapshot of the selected
	channel.
Picture Storage	
	To use this function, make sure the snapshot function is enabled for <b>Intel</b>
	in Main Menu > STORAGE > Schedule > Snapshot.
	Select the checkbox to enable the function. When an alarm event occurs,
	the video output port outputs the settings configured in "Main Menu >
	DISPLAY > TOUR > Extra Screen."
Video Matrix	
	<ul> <li>Not all models support this function.</li> </ul>
	• The extra screen must be enabled to support this function.
Buzzer	Select the checkbox to activate a buzzer noise at the Device.
Log	Select the checkbox to enable the Device to record a local alarm log.
Alarm Tone	Select to enable audio broadcast in response to a face detection event.
White Light	Select the checkbox to enable the white light alarm of the camera.
Siren	Select the checkbox to enable the sound alarm of the camera.

<u>Step 4</u> Click **Apply** to complete the settings.

## 5.11.2.1.2 Searching for and Playing Detected Faces

You can search the detected faces and play back. <u>Step 1</u> Select Main Menu > AI > AI Search > Face Detection.

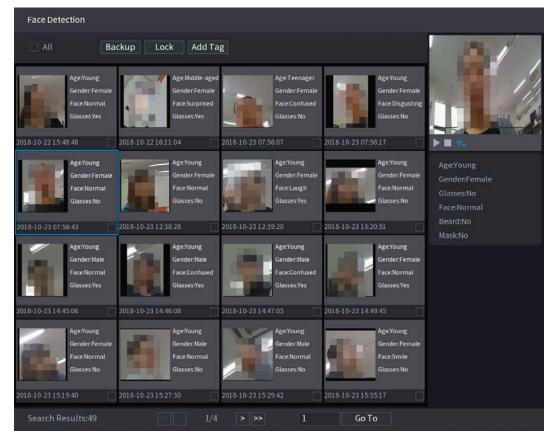

Figure 5-145 Face detection

Channel	1	•	
Start Time	2020 - 03 - 02	00:00:00	
End Time	2020 -03 -03	00:00:00	
Gender	All		
Age	All		
Glasses	All		
Beard	All		
Mouth Mask	All		
Expression	All		
	Smart Search		

- <u>Step 2</u> Select the channel, enter the start time and end time, and set for the gender, age, glasses, beard, and mask.
- Step 3 Click Smart Search.

The results are displayed.

Figure 5-146 Search results

<u>Step 4</u> Select the face that you want to play back.

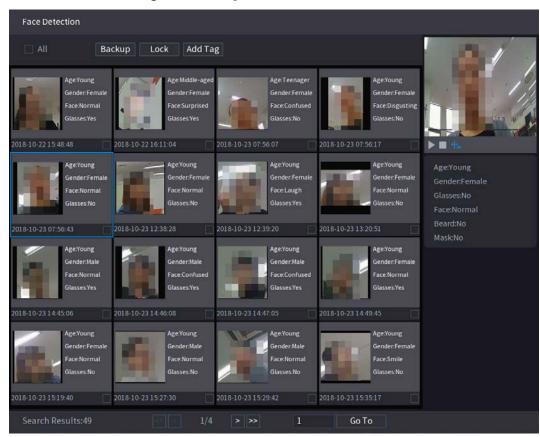

Figure 5-147 Registered information

<u>Step 5</u> Click to start playing back the recorded detected face snapshots.

Double-click on the playing page to switch between full screen playing and thumbnail playing.

You can also do the following operations to the recorded files.

- To export the database file (.csv) to the external storage device, select files, click **Export**, and then select the save path.
- To back up the recorded files to the external storage device, select files, click **Backup**, select the save path and file type, and then click **Start**.

Figure 5-148 Backup

ile Backu	p

- To lock the files to make it unable to be overwritten, select the files, and then click **Lock**.
- To add a mark to the file, select the files and then click Add Tag.

## 5.11.2.2 Face Recognition

Face recognition applies to AI preview mode and smart search.

- Al preview mode: Supports comparing the detected faces with the face database, and display the comparison results.
- Smart search: Supports faces searching by faces attributes or portraits.

Ш

- If you select AI by device, then among face detection and recognition, IVS function, and video structuring, you can use one of them at the same time for the same channel.
- Before enabling face recognition function for a channel, the face detection must be enabled first for this channel.

#### 5.11.2.2.1 Face Database Management

You should create a face database for comparing the detected faces and the faces in the database. The Device supports creating maximum 20 databases and registering 100,000 faces.

### Creating a Face Database

<u>Step 1</u> Select Main Menu > Al > Database > Face Database Config.

Туре	Local						
1	Name	Register No.	Failed No.	Error No.	Status	Modify	Details 3
	vip				Armin	g 👔	Ē
Modeling	Refresh				A	dd	Delete

Figure 5-149 Face database configuration

- <u>Step 2</u> At **Type**, you can select **Local** or **Remote**.
  - Local: Viewing the existing face databases or adding new one on the DVR.
  - **Remote**: If you have face recognition camera, you can select this to view the existing face databases or adding new one on the camera.
- Step 3 Click Add.

Add		
Name		
	ОК	Back

- <u>Step 4</u> Enter the face database name, and then click **OK**.
  - Click ito modify database name.

- Click to view the database details and add new faces to the database. For details, see " Adding Face Pictures."
- Select the database, and then click **Modeling**. The system will extract the attributes of face pictures in the database for the future comparison.
- Select the database, and then click **Delete** to delete the database.

Figure 5-151 Configure database

ту	pe		Local						
	1		Name	Register No.	Failed No.	Error No.	Status M	lodify	Details 3
			vip				Arming	ľ	Ē
M	/odel	ling	Refresh				Ad	d	Delete

## **Adding Face Pictures**

You can add face pictures to the existing databases one by one or by batch, or add from the detected faces.

#### 

To add face pictures one by one or by batch, you need to get the pictures from the USB storage device. The picture size should be smaller than 256K with resolution between 200×200–6000×5000.

#### Adding One Face Picture

<u>Step 1</u> Select Main Menu > AI > Database > Face Database Config.

<u>Step 2</u> Click of the database that you want to configure.

Figure 5-152 Details

<u>Step 5</u> Configure the added face database.

- Click for modify the similarity. The lower the number is, the easier the alarm linkage will trigger.
- Click to delete the face database.
- Click 🗱 to set the alarm linkage.

After setting is completed, click **OK**.

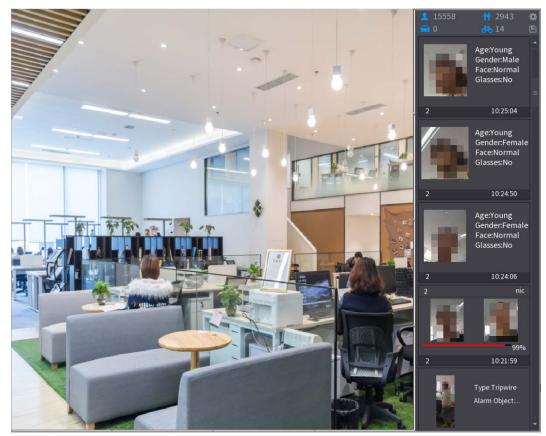

- <u>Step 6</u> (Optional) Enable the **Stranger Mode**.
  - 1) Enable the Stranger mode (IIII). When the detected faces do not belong to the face database, the system remarks the face as "Stranger."
  - 2) Click **Setting** to set the alarm linkage.
  - 3) After setting is completed, click **OK**.
- <u>Step 7</u> Click **Apply** to complete the settings.

After the face recognition function is enabled, right-click on the live view screen, and then select **Live Mode > AI Mode**.

- If the detected face belongs to the enabled face database, the similarity result is displayed.
- If the detected face does not belong to the enabled face database, the face will be remarked as "Stranger."

#### Figure 5-164 Similarity result

### 5.11.2.2.3 Smart Search for Face Recognition

You can compare the detected faces with the face database and play back.

- Search by attributes: Search the face database by the face attributes.
- Search by picture: Search the face database by uploading face pictures.

## Searching by Attributes

<u>Step 1</u> Select Main Menu > AI > AI Search > Face Recognition > Search by Attributes.

## 5.11.2.3 IVS Function

The IVS function processes and analyzes the images to extract the key information to match with the preset rules. When the detected behaviors match with the rules, the system activates alarms.

If you select AI by device, then among face detection and recognition, IVS function, and video structuring, you can use one of them at the same time for the same channel.

### 5.11.2.3.1 Configuring IVS Parameters

The alarms are generated according to the configured parameters. <u>Step 1</u> Select Main Menu > AI > Parameters > IVS.

Figure 5-175 IVS

Char	nnel	1	•	Туре	Al by l	Device 🔻
0	Enable	Name	Туре	Draw	Trigger	Delete P
4						•
						Add
Defa	ult					Apply Back

<u>Step 2</u> In the **Channel** list, select the channel number that you want to configure the IVS function.

<u>Step 3</u> At **Type**, you can select from **AI by Camera** and **AI by Device**.

- Al by Camera: This option requires certain Al cameras. The camera will do all the Al analysis, and then give the results to the DVR.
- Al by Device: The camera only transmits normal video stream to the DVR, and then the DVR will do all the AI analysis.
- Step 4 Click Add.

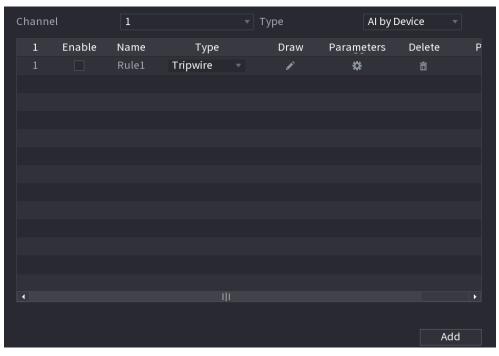

Figure 5-176 Added rule

<u>Step 5</u> Configure the parameters for the rule that you selected.

<u>Step 6</u> Select the checkbox of the rule to enable it.

#### <u>Step 7</u> Click **Apply** to complete the settings.

## **Configuring Tripwire Rules**

When the target object crosses the tripwire in the defined direction, the system activates alarms.

- The tripwire can be configured as a straight line or broken line.
- Supports detecting one-way or two-way tripwire crossing.
- Supports multiple tripwires in the same scenario to meet the complexity.
- Supports size filtering for target.

#### <u>Step 1</u> On the rule line that you added, in the **Type** list, select **Tripwire**.

#### Figure 5-177 Tripwire

Step 2 Draw a tripwire.

- 1) In the **Channel** list, select the channel that you want to configure the rules for.
- 2) Click .

#### Configure the settings for the parameters of drawing rules. 3)

#### Figure 5-179 Tripwire parameters

Parameter	Description
Name	Enter the customized rule name.
Direction	Set the direction of the tripwire. You can choose <b>A to B</b> (left to right), <b>B to</b>
Direction	A (right to left), and Both.
Target Filter	Click Click to draw areas to filter the target. You can configure two filtering targets (maximum size and minimum size). When the target that is crossing the tripwire is smaller than the minimum size or larger than the maximum size, no alarms will be activated. The maximum size should be larger than the minimum size.
Effective Target	Enable the Al Recognition function ( <b>IDD</b> ). By default, <b>Human</b> and <b>Motor Vehicle</b> are selected for alarm object.

4) Drag to draw a tripwire. The tripwire can be a straight line, broken line or polygon.

5) Click **OK** to save the settings.

<u>Step 3</u> Click to set the actions to be triggered.

Figure 5-180 Trigger

				OK	Back

Step 4	Configure the	triaaerina	parameters.
Step 1	configure are		parameters

## Figure 5-181 Triggering parameters

Parameter	Description				
	Define a period during which the detection is active.				
Schedule	For details, see "Setting Motion Detection Period" section in "5.10.4.1				
	Configuring Motion Detection Settings."				
	Click <b>Setting</b> to display setting page.				
	• General Alarm: Enable general alarm and select the alarm output				
	port.				
Alarm-out Port	• Ext. Alarm: Connect the alarm box to the Device and then enable it.				
Aldrin-Out Port	• Wireless Siren: Connect the wireless gateway to the Device and then				
	enable it. For details, see "5.12 IoT Function."				
	When an alarm event occurs, the system links the peripheral alarm devices				
	connected to the selected output port.				
	Set a length of time for the Device to delay turning off alarm after the				
Post-Alarm	external alarm is cancelled. The value ranges from 0 seconds to 300				
	seconds. If you enter 0, there will be no delay.				
Show Message	Select the Show Message checkbox to enable a pop-up alarm message				
Show Message	in your local host PC.				
	Select the Report Alarm checkbox to enable the system to upload the				
	alarm signal to the network (including alarm center) when an alarm				
	event occurs.				
Report Alarm					
кероп Аатт	• Not all models support this function.				
	• The corresponding parameters in the alarm center should be				
	configured. For details, see "5.15.1.12 Configuring Alarm Center				
	Settings."				

Parameter	Description
	Select the Send Email checkbox to enable the system to send an email
	notification when an alarm event occurs.
Send Email	
	To use this function, make sure the email function is enabled in <b>Main</b>
	Menu > NETWORK > EMAIL.
	Select the channel(s) that you want to record. The selected channel(s)
	starts recording after an alarm event occurs.
Record Channel	
	The recording for intelligence event and auto recording function must be
	enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage
	Schedule" and "5.9.1 Enabling Record Control."
	Click <b>Setting</b> to display the PTZ page.
	Enable PTZ linkage actions, such as selecting the preset that you want to
DT71 in last as	be called when an alarm event occurs.
PTZ Linkage	
	To use this function, the PTZ operations must be configured. For details,
	see "5.4 Controlling PTZ Cameras."
	Set a length of time for the Device to delay turning off recording after
Post-Record	the alarm is cancelled. The value ranges from 10 seconds to 300 seconds.
	Select the <b>Tour</b> checkbox to enable a tour of the selected channels.
Tour	• To use this function, the tour setting must be configured.
	• After the tour is ended, the live view screen returns to the view layout
	before tour started.
	Select the <b>Picture Storage</b> checkbox to take a snapshot of the selected
	channel.
Picture Storage	
	To use this function, make sure the snapshot function is enabled for Intel
	in Main Menu > STORAGE > Schedule > Picture Storage.
	Select the checkbox to enable the function. When an alarm event occurs,
	the video output port outputs the settings configured in "Main Menu >
Video Matrix	DISPLAY > Tour > Sub Screen."
	<ul> <li>Not all models support this function.</li> </ul>
	• The extra screen must be enabled to support this function.
Buzzer	Select the checkbox to activate a buzzer noise at the Device.
Log	Select the checkbox to enable the Device to record a local alarm log.
Alarm Tone	Select to enable audio broadcast in response to a face detection event.

<u>Step 5</u> Click **OK** to save the settings.

<u>Step 6</u> Select the **Enable** checkbox, and then click **Apply**.

The tripwire detecting function is active. When the target object crosses the tripwire in the defined direction, the system activates alarms.

## **Configuring Intrusion Rules**

When the target enters and leaves the defined detection area, or the target appears in the defined area, the system activates alarms.

- You can define the shape and quantity of intrusion areas.
- Supports detecting the behaviors that enter and leave the intrusion areas.
- Supports detecting the behaviors that are moving in the intrusion areas. The quantity of areas and lasting time can be configured.
- Supports size filtering for target.

<u>Step 1</u> On the rule line that you added, in the **Type** list, select **Intrusion**.

Figure 5-182 Intrusion

## 5.11.2.4 Video Structuring

The device can detect and extract key features from the human bodies and non-motor vehicles in the video, and then build a structured database. You can search any target you need with these features.

### 5.11.2.4.1 Configuring Video Structuring

<u>Step 1</u> Select Main Menu > AI > Parameters > Video Structuring.

Figure 5-189 Video structuring

Channel 1	<ul> <li>Al by Device</li> </ul>	•
Human Detection	Face Detect	
Non-motor Vehicle		

- <u>Step 2</u> In the **Channel** list, select a channel that you want to configure video structuring function, and then enable it.
- <u>Step 3</u> At **Type**, you can select from **AI by Camera** and **AI by Device**.
  - Al by Camera: This option requires certain Al cameras. The camera will do all the Al analysis, and then give the results to the DVR.
  - Al by Device: The camera only transmits normal video stream to the DVR, and then the DVR will do all the Al analysis.
- <u>Step 4</u> You can select from **Human Detection**, Face Detect, and Non-motor Vehicle.
  - Human Detection: Select this option, and then the device will analyze all the human body features in the video, including Top, Top Color, Bottom, Bottom Color, Hat, Bag, Gender, Age, and Umbrella. You can search the target you need with these features. See "Human Body Detection" in "5.11.1.4.2 Smart Search for Video Structuring."
  - Face Detect: You need to select Human Detection first, and then you can select this option. If you select this option, and there is any human face appears in the video, then there will be an extra face image and some extra face features in the human body detection results, including Glasses, Expression, Mask, and Beard. You can search the target you need with these features. See "Human Body Detection" in "5.11.1.4.2 Smart Search for Video Structuring."
  - Non-motor Vehicle: Select this option, and then the device will analyze all the nonmotor vehicle features in the video, including Type, Vehicle Color, People Number, and Helmet. You can search the target you need with these features. See " Non-motor Vehicle Detection" in "5.11.1.4.2 Smart Search for Video Structuring."

Step 5 Click Apply.

## 5.11.2.4.2 Smart Search for Video Structuring

You can search the target you need with human body features or non-motor vehicle features Human Body Detection

<u>Step 1</u> Select Main Menu > AI > SMART SEARCH > Human Body Detection.

# 5.11.3 For Lite Al Series

Al module provides SMD (Smart Motion Detection) and IVS functions. These functions take effect after they are configured and enabled. It adopts deep learning and can realize precision alarms. You can only enable one of them to the same channel at the same time.

- SMD: The device can detect and classify humans and vehicles in the image.
- IVS: The IVS function processes and analyzes the human and vehicle images to extract the key
  information to match with the preset rules. When the detected behaviors match with the rules,
  the system activates alarms. The IVS function can avoid wrong alarms by filtering the factors such
  as rains, light, and animals.
- Face detection: The Device can analyze the faces captured by the camera and link the configured alarms. This function is available for XVR5X-I and XVR 7X-I series only.
- Face recognition: The Device can compare the captured faces with the face database and then link the configured alarms. This function is available for XVR 7X-I series only.

### 

SMD, face detection, face recognition and IVS cannot be enabled simultaneously on select models. For details, see 5.1.4.2 Configuring General Settings.

# 5.11.3.1 SMD

The device can detect and classify humans and vehicles in the image.

### 5.11.3.1.1 Configuring SMD Parameters

<u>Step 1</u> Select Main Menu > Al > Parameters > SMD.

Figure 5-195 SMD

	5		
Channel	1 *

Sub Screen	Buzzer Log		
Alarm Tone	None 🔹		
White Light	Siren		
SMD linkage configura	tion synchronizes with MD	linkage configuration.	

- <u>Step 2</u> In the **Channel** list, select a channel that you want to configure face detection function, and then enable it.
- <u>Step 3</u> Configure the parameters.

Figure 5-196 SMD parameters

Parameter	Description			
Channel	In the <b>Channel</b> list, select a channel to set the motion detection.			
Enable	Enable or disable the motion detection function.			
Sensitivity	Set the sensitivity for smart motion detection.			
Effective Target	Select human or motor vehicle or both.			
Schedule	Define a period during which the motion detection is active.			
Anti-Dither	Configure the time period from end of event detection to the stop of alarm.			
Alarm-out Port	<ul> <li>Click Setting to display setting page.</li> <li>General Alarm: Enable alarm activation through the alarm devices connected to the selected output port.</li> <li>External Alarm: Enable alarm activation through the connected alarm box.</li> <li>Wireless Siren: Enable alarm activation through devices connected by USB gateway or camera gateway.</li> </ul>			
Post-Alarm Set a length of time for the Device to delay turning off alarm external alarm is cancelled. The value ranges from 0 seconds seconds, and the default value is 10 seconds. If you enter 0, ther no delay.				
Show Message	Select the <b>Show Message</b> checkbox to enable a pop-up message in your local host PC.			

Parameter	Description
	Select the Report Alarm checkbox to enable the system to upload the
Report Alarm	alarm signal to the network (including alarm center) when an alarm event
	occurs.
	Select the Send Email checkbox to enable the system to send an email
	notification when an alarm event occurs.
Send Email	
	To use this function, make sure the email function is enabled in Main
	Menu > NETWORK > Email.
	Select the channel(s) that you want to record. The selected channel(s)
	starts recording after an alarm event occurs.
Record Channel	
	The recording for motion detection and auto recording function must be
	enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage
	Schedule" and "5.9.1 Enabling Record Control."
	Click <b>Setting</b> to display the PTZ page.
	Enable PTZ linkage actions, such as selecting the preset that you want to
PTZ Linkage	be called when an alarm event occurs.
	Motion Detect can only activate PTZ preset.
	Set a length of time for the Device to delay turning off recording after the
Post Record	alarm is cancelled. The value ranges from 10 seconds to 300 seconds, and
	the default value is 10 seconds.
Tour	Select the <b>Tour</b> checkbox to enable a tour of the selected channels.
	Select the <b>Snapshot</b> checkbox to take a snapshot of the selected channel.
Dicture Storage	
Picture Storage	To use this function, select Main Menu > CAMERA > Encode > Snapshot,
	in the <b>Type</b> list, select <b>Event</b> .
	Select the checkbox to enable the function. When an alarm event occurs,
	the extra screen outputs the settings configured in Main Menu >
Sub Screen	DISPLAY > Tour > Sub Screen.
Sub Scieen	
	<ul> <li>Not all models support this function.</li> </ul>
	<ul> <li>To use this function, extra screen shall be enabled.</li> </ul>
	Select the checkbox to enable the function. When an alarm event occurs,
	the video output port outputs the settings configured in Main Menu >
Video Matrix	DISPLAY > Tour.
	Not all models support this function.
Duzzor	Select the checkbox to activate a buzzer noise at the Device.
Buzzer	
Log	Select the checkbox to enable the Device to record a local alarm log.
Log	Select the checkbox to enable the Device to record a local alarm log.Select to enable audio broadcast/alarm tones in response to a motion

	Parameter	Description
	Siren	Select the checkbox to enable sound alarm of the camera.
-		

<u>Step 4</u> Click **Apply** to complete the settings.

### 5.11.3.1.2 Searching for SMD Reports

You can search the detection history by channel, object type, and time.

```
<u>Step 1</u> Select Main Menu > AI > AI Search > SMD.
```

Figure 5-197 SMD

Channel	All	¥	Туре	All	•
Start Time	2020 - 03 - 02 00 : 00 : 00		End Time	2020 -03 -03	00:00:00
					Search

<u>Step 2</u> Select the channel, enter the start time and end time, and select the object type you need.

Step 3 Click Search.

The results are displayed.

# 5.11.3.2 Configuring IVS Function

The IVS function processes and analyzes the images to extract the key information to match with the preset rules. When the detected behaviors match with the rules, the system activates alarms.

### 5.11.3.2.1 Configuring IVS Parameters

The alarms are generated according to the configured parameters.

```
<u>Step 1</u> Select Main Menu > AI > Parameters > IVS.
```

Figure 5-198 IVS

Channe	əl	1					
0	Enable	Name	Туре	Draw	Parameters	Delete	Ρ
•							
						Add	

You can enable the AI Mode, and then the detection accuracy would be improved, but the video stream quantity that the DVR can process will reduce.

- <u>Step 2</u> In the **Channel** list, select the channel number that you want to configure the IVS function.
- Step 3 Click Add.

Channel	1		▼ T	ype	Al by	Device 🔻	
1 Enable	Name	Туре		Draw	Parameters	Delete	Ρ
	Rule1	Tripwire		<b>N</b>	\$	<u>ش</u>	
•							Þ
						Add	

Figure 5-199 Added rule

<u>Step 4</u> Configure the parameters for the rule that you selected.

<u>Step 5</u> Select the checkbox of the rule to enable it.

<u>Step 6</u> Click **Apply** to complete the settings.

# **Configuring Tripwire Rules**

When the target object crosses the tripwire in the defined direction, the system activates alarms.

- The tripwire can be configured as a straight line or broken line.
- Supports detecting one-way or two-way tripwire crossing.
- Supports multiple tripwires in the same scenario to meet the complexity.
- Supports size filtering for target.

<u>Step 1</u> On the rule line that you added, in the **Type** list, select **Tripwire**.

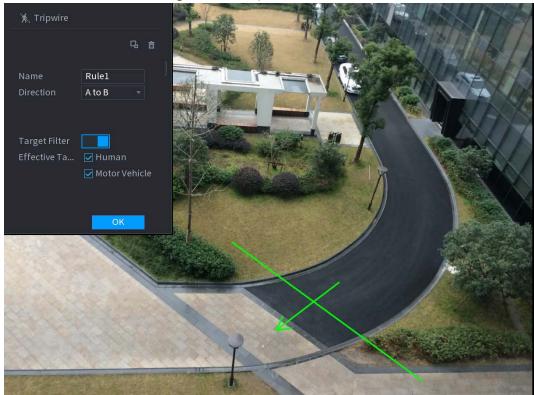

Figure 5-200 Tripwire

#### <u>Step 2</u> Draw a tripwire.

- 1) In the **Channel** list, select the channel that you want to configure the rules for.
- 2) Click

Figure 5-201 Tripwire rule

3) Configure the settings for the parameters of drawing rules.

Table 5-37 Tripwire parameters

Parameter	Description			
Name	Enter the customized rule name.			
Direction	Set the direction of the tripwire. You can choose <b>A to B</b> (left to right), <b>B to</b>			
Direction	A (right to left), and Both.			
Target Filter	Click to draw areas to filter the target. You can configure two filtering targets (maximum size and minimum size). When the target that is crossing the tripwire is smaller than the minimum size or larger than the maximum size, no alarms will be activated. The maximum size should be larger than the minimum size.			
Effective Target	Enable the AI Recognition function ( <b>IDD</b> ). By default, <b>Human</b> and <b>Motor Vehicle</b> are selected for alarm object.			

- 4) Drag to draw a tripwire. The tripwire can be a straight line, broken line or polygon.
- 5) Click **OK** to save the settings.

Step 3 Click to set the actions to be triggered.

Trigger				
Schedule	Setting			
Alarm-out Port	Setting	Post-Alarm	10	sec.

### Figure 5-202 Trigger

<u>Step 4</u> Configure the triggering parameters.

Table 5-38 Triggering parameters					
Parameter	Description				
	Define a period during which the detection is active.				
Schedule	For details, see "Setting Motion Detection Period" section in "5.10.4.1				
	Configuring Motion Detection Settings."				

Parameter	Description
	Click <b>Setting</b> to display setting page.
	• General Alarm: Enable general alarm and select the alarm output
	port.
Alarm-out Port	• Ext. Alarm: Connect the alarm box to the Device and then enable it.
Alarm-Out Port	Wireless Siren: Connect the wireless gateway to the Device and then
	enable it. For details, see "5.12 IoT Function."
	When an alarm event occurs, the system links the peripheral alarm devices
	connected to the selected output port.
	Set a length of time for the Device to delay turning off alarm after the
Post-Alarm	external alarm is cancelled. The value ranges from 0 seconds to 300
	seconds. If you enter 0, there will be no delay.
Show Message	Select the <b>Show Message</b> checkbox to enable a pop-up alarm message
Show Message	in your local host PC.
	Select the Report Alarm checkbox to enable the system to upload the
	alarm signal to the network (including alarm center) when an alarm
	event occurs.
Poport Alarm	
Report Alarm	Not all models support this function.
	• The corresponding parameters in the alarm center should be
	configured. For details, see "5.15.1.12 Configuring Alarm Center
	Settings."
	Select the Send Email checkbox to enable the system to send an email
	notification when an alarm event occurs.
Send Email	
	To use this function, make sure the email function is enabled in <b>Main</b>
	Menu > NETWORK > Email.
	Select the channel(s) that you want to record. The selected channel(s)
	starts recording after an alarm event occurs.
Record Channel	
	The recording for intelligence event and auto recording function must be
	enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage
	Schedule" and "5.9.1 Enabling Record Control."
	Click <b>Setting</b> to display the PTZ page.
	Enable PTZ linkage actions, such as selecting the preset that you want to
	be called when an alarm event occurs.
PTZ Linkage	
	To use this function, the PTZ operations must be configured. For details,
	see "5.4 Controlling PTZ Cameras."
	Set a length of time for the Device to delay turning off recording after
Post-Record	the alarm is cancelled. The value ranges from 10 seconds to 300 seconds.

Parameter	Description					
	Select the <b>Tour</b> checkbox to enable a tour of the selected channels.					
Tour	• To use this function, the tour setting must be configured.					
	• After the tour is ended, the live view screen returns to the view layout					
	before tour started.					
	Select the <b>Snapshot</b> checkbox to take a snapshot of the selected					
	channel.					
Picture Storage						
	To use this function, make sure the snapshot function is enabled for Intel					
	in Main Menu > STORAGE > Schedule > Snapshot.					
	Select the checkbox to enable the function. When an alarm event occurs,					
	the video output port outputs the settings configured in "Main Menu >					
Video Matrix	DISPLAY > Tour > Sub Screen."					
	• Not all models support this function.					
	• The extra screen must be enabled to support this function.					
Buzzer	Select the checkbox to activate a buzzer noise at the Device.					
Log	Select the checkbox to enable the Device to record a local alarm log.					
Alarm Tone	Select to enable audio broadcast in response to a face detection event.					

<u>Step 5</u> Click **OK** to save the settings.

<u>Step 6</u> Select the **Enable** checkbox, and then click **Apply**.

The tripwire detecting function is active. When the target object crosses the tripwire in the defined direction, the system activates alarms.

# Configuring Intrusion Rules

When the target enters and leaves the defined detection area, or the target appears in the defined area, the system activates alarms.

- You can define the shape and quantity of intrusion areas.
- Supports detecting the behaviors that enter and leave the intrusion areas.
- Supports detecting the behaviors that are moving in the intrusion areas. The quantity of areas and lasting time can be configured.
- Supports size filtering for target.

<u>Step 1</u> On the rule line that you added, in the **Type** list, select **Intrusion**.

Figure 5-203 Intrusion

Chann	el	2		▼	Туре		Al by Device	▼	
1	Enable	Name	Туре		Draw	Paramete	ers Delete	5	Р
			Intrusion	-		\$

#### Step 2 Draw an area.

- 1) In the **Channel** list, select the channel that you want to configure the rules for.
- 2) Click

Figure 5-204 Intrusion rule

3) Configure the settings for the parameters of drawing rules.

Table 5-39 Intrusion parameters

Parameter	Description					
Name	Enter the customized rule name.					
Action	Configure the actions that are defined as intrusion. You can select the					
ACTION	Appear checkbox and the Cross checkbox.					
Direction	In the <b>Direction</b> list, select the direction of crossing the configured area.					
Direction	You can select Enter&Exit, Enter, and Exit.					
	Click <b>B</b> to draw areas to filter the target.					
Target Filter	You can configure two filtering targets (maximum size and minimum size).					
	When the target that is crossing the tripwire is smaller than the minimum					
	size or larger than the maximum size, no alarms will be activated. The					
	maximum size should be larger than the minimum size.					
Effective Target	Enable the Al Recognition function ( <b>IDD</b> ). By default, <b>Human</b> and					
	Motor Vehicle are selected for alarm object.					
4) Drag to draw	an area.					

- 5) Click **OK** to save the settings.
- Step 3 Click to set the actions to be triggered.
- Step 4Select the Enable checkbox, and then click Apply.The intrusion detecting function is active. When the target enters and leaves the area, or the<br/>target appears in the defined area, the system activates alarms.

### 5.11.3.2.2 Smart Search for IVS Function

You can search for the intelligent events and play back.

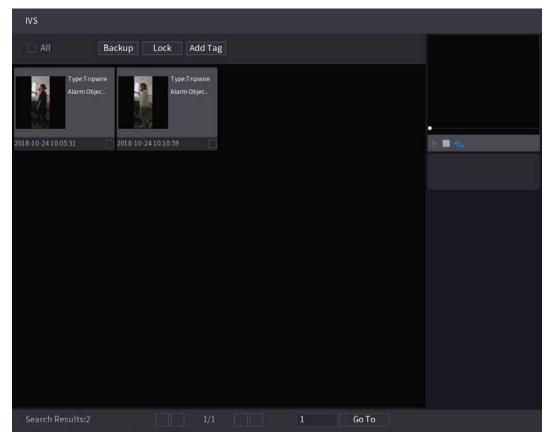

<u>Step 1</u> Select Main Menu > AI > AI Search > IVS.

Figure	5-205 IVS

# 5.11.3.4 Face Recognition (For XVR7X-I series only)

Face recognition applies to AI preview mode and smart search.

- Al preview mode: Supports comparing the detected faces with the face database, and display the comparison results.
- Smart search: Supports faces searching by faces attributes or portraits.

- If you select AI by device, then among face detection and recognition, IVS function, you can use one of them at the same time for the same channel.
- Before enabling face recognition function for a channel, the face detection must be enabled first for this channel.

### 5.11.3.4.1 Face Database Management

You should create a face database for comparing the detected faces and the faces in the database. The Device supports creating maximum 20 databases and registering 100,000 faces.

# Creating a Face Database

#### <u>Step 1</u> Select Main Menu > AI > Database > Face Database Config.

# **Adding Face Pictures**

You can add face pictures to the existing databases one by one or by batch, or add from the detected faces.

### 

To add face pictures one by one or by batch, you need to get the pictures from the USB storage device. The picture size should be smaller than 256K with resolution between 200×200–6000×5000.

### Adding One Face Picture

<u>Step 1</u> Select Main Menu > AI > Database > Face Database Config.

Step 2 Click of the database that you want to configure.

Figure 5-217 Details

Schedule Target Face Data Stranger Alarm	Setting Setting					
0 Enable	Name	Similarity	Modify	Parameters	Delete	
		80	ľ	\$	ā	
2		80	ø	\$	ā	
Default					Apply	Back

<u>Step 5</u> Configure the added face database.

- Click for modify the similarity. The lower the number is, the easier the alarm linkage will trigger.
- Click to delete the face database.
- Click to set the alarm linkage.

After setting is completed, click OK.

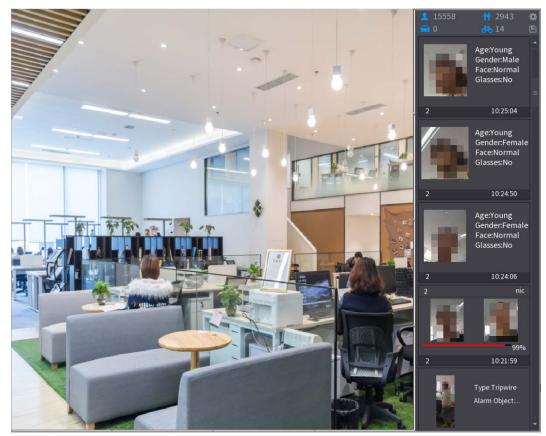

- <u>Step 6</u> (Optional) Enable the **Stranger Mode**.
  - 1) Enable the Stranger mode (
  - 2) Click **Setting** to set the alarm linkage.
  - 3) After setting is completed, click **OK**.
- <u>Step 7</u> Click **Apply** to complete the settings.

After the face recognition function is enabled, right-click on the live view screen, and then select **Preview Mode > AI Mode**. The AI mode live view screen is displayed.

- If the detected face belongs to the enabled face database, the similarity result is displayed.
- If the detected face does not belong to the enabled face database, the face will be remarked as "Stranger."

#### Figure 5-230 Similarity result

### 5.11.3.4.3 Smart Search for Face Recognition

You can compare the detected faces with the face database and play back.

- Search by attributes: Search the face database by the face attributes.
- Search by picture: Search the face database by uploading face pictures.

# Searching by Attributes

<u>Step 1</u> Select Main Menu > AI > AI Search > Face Recognition > Search by Attributes.

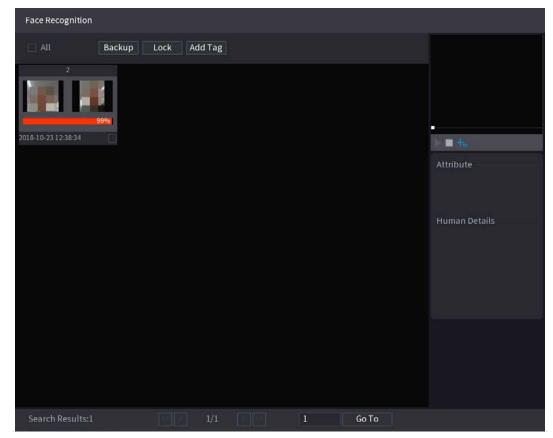

Channel	-

		POS Info Line Break		

<u>Step 2</u> Configure the settings for the POS parameters.

	Description
Parameter	Description
	In the <b>POS Name</b> list, select the POS machine that you want to
POS Name	configures settings for. Click low to modify the POS name.
	The POS name supports 21 Chinese characters or 63 English characters.
Enable	Enable the POS function.
	Select the channel(s) that you want to record. The selected channel(s)
	starts recording after an alarm occurs.
Record Channel	
	The recording for POS alarms and auto recording function must be
	enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage
	Schedule" and "5.9.1 Enabling Record Control."
Privacy	Enter the privacy content.
Drotocol	Select POS by default. Different machine corresponds to different
PTOLOCOI	protocol.
	In the <b>Connect Type</b> list, select the connection protocol type. Click
Connection Mode	, the IP Address page is displayed.
	In the <b>Source IP</b> box, enter the IP address (the machine that is
	connected to the Device) that sends messages.
Character Encode	Select a character encoding mode.
Protocol Connection Mode	enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage Schedule" and "5.9.1 Enabling Record Control." Enter the privacy content. Select <b>POS</b> by default. Different machine corresponds to different protocol. In the <b>Connect Type</b> list, select the connection protocol type. Click <b>I</b> the IP Address page is displayed. In the <b>Source IP</b> box, enter the IP address (the machine that is connected to the Device) that sends messages.

Parameter	Description				
	In the <b>Overlay Mode</b> list, Select <b>Page</b> or <b>ROLL</b> .				
	• <b>Page</b> means to turn a page when there are 16 lines of overlay information.				
Overlay Mode	• <b>ROLL</b> means to roll up the page when there are 16 lines of overlay information. The first line disappears each time.				
	When local preview mode is 4-split, overlay information is substituted				
	when there are 8 lines.				
	When the network is not working correctly and cannot be recovered				
	after the entered timeout limit, the POS information will not display				
Network Timeout	normally. After the network is recovered, the latest POS information				
	will be displayed.				
	Enter the time that how long you want to keep the POS information				
Overlay Time	displaying. For example, enter 5, the POS information disappear from				
	the screen after 5 seconds.				
Font Size	In the Font Size list, select Small, Medium, or Large as the text size of				
FOILT SIZE	POS information				
Font Color	In the color bar, click to select the color for the text size of POS				
	information.				
POS Info	Enable the POS Info function, the POS information displays in the live				
	view screen.				
	It does not need to configure. The system goes to a new line 1s after no				
	data is received.				
	If you enter a line delimiter, the system goes to a new line when overlay				
Line Break	information identifies the line delimiter (hexadecimal).				
	For example, if line delimiter is F and overlay information is 123F6789,				
	the local preview and web overlay information is displayed as:				
	123				
	6789				

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.14 Configuring Backup Settings

# 5.14.1 Finding USB Device

When you inset a USB storage device into the USB port of the Device, the Device detects the USB storage device and pops up **Find USB device** page, which provides you a shortcut to perform backup and upgrading operations.

For details, see "5.14.2 Backing up Files", "5.21.2 Viewing Log Information", "5.20.4 Exporting and Importing System Settings", and "5.20.6 Updating the Device."

# 5.14.2 Backing up Files

You can back up the recorded videos and snapshots.

#### <u>Step 1</u> Select Main Menu > Backup.

Figure 5-266 Backup

Device Name	sdb1(USB USB)	▼ Format 0.00 KB/7.51 GB(Free/Total)	
Storage Path		Browse	
Record Ch	A1		
Туре	All	▼ Main Stream ▼	
Start Time	2020-01-04 00:00:00	End Time 2020 -01 -04 15 :50 :1	4
File Format	DAV	▼ Search R	lemove
0 Cha	annel Type Start Time	End Time Size(KB) F	Play
0.00 KB(Needeo	d Space)	E	Backup

<u>Step 2</u> Configure the settings for the backup parameters.

Table 5-47 Backup parameters

Parameter	Description
Device Name	In the Device Name list, select the device that you want to back up the
Device Name	files to.
	Click Format, the Format page is displayed.
	• If the capacity of external storage device is less than 2 TB, you can
Format	select FAT32 or NTFS to format it.
	• If the capacity of external storage device is equal to or more than 2
	TB, you can only select <b>NTFS</b> to format it.

Parameter	Description		
Path	Click Browse, the Browse page is displayed. Select the route where you		
ratii	want to search for the files.		
Record Channel	In the Record Channel list, select the channel where you want to search		
Record Channel	for the files.		
Туре	In the <b>Type</b> list, select the file type that you want to search.		
Start Time	Enter the start time and end time for the files that you want to search		
End Time	Enter the start time and end time for the files that you want to search.		
File Format	In the File Format list, select the file format as DAV or MP4 that you want		
rile ronnal	to search.		

<u>Step 3</u> Click **Search** to search the files that meet the configured settings.

The searched results will display in the table.

<u>Step 4</u> Select the files that you want to back up.

<u>Step 5</u> Click **Backup** to back up the selected files to the configured path.

 $\square$ 

#### Click Remove to remove all the searched results.

The system will display a backup progress bar. A dialog box will be prompted When backup is completed.

mpleted.						
	Figure 5-26	7 Browse

Step 6 Click OK.

# 5.15 Network Management

# 5.15.1 Configuring Network Settings

New Folder

SmartPlayer(2).exe

You can ensure the network interworking between the Device and other devices through configuring the network settings.

Back

# 5.15.1.1 Configuring TCP/IP Settings

You can configure the settings for the Device such as IP address, DNS according to the networking plan.

Select Main Menu > NETWORK > TCP/IP, the TCP/IP page is displayed.

For details about parameter settings, see "5.1.4.4 Configuring Network Settings."

Figure 5-268 TCP/IP

NIC Name	IP Address	Network Mode	NIC Member	Modify	Unbind

		HTTPS Port	443		
			554		
	UPnP		123		
		POS Port	38800		
					Apply Back

Figure 5-269 Port

<u>Step 2</u> Configure the settings for the connection parameters.

The parameter setting can take effect without need to reboot the device.

Parameter	Description			
	The allowable maximum clients accessing the Device at the same time,			
Max Connection	such as WEB, Platform, and Mobile Phone.			
	Select a value between 1 and 128. The default value setting is 128.			
	The default value setting is 37777. You can enter the value according to			
TCP Port	your actual situation.			
	The default value setting is 37778. You can enter the value according to			
UDP Port	your actual situation.			
	The default value setting is 80. You can enter the value according to your			
HTTP Port	actual situation.			
	If you enter other value, for example, 70, and then you should enter 70			
	after the IP address when logging in the Device by browser.			
DTCD Dowt	The default value setting is 554. You can enter the value according to your			
RTSP Port	actual situation.			
DOC Dort	Data transmission. The value range is from 1 through 65535. The default			
POS Port	value is 38800.			
	The default value setting is 123. You can enter the value according to your			
NTP Server Port	actual situation.			

Table 5-48 Connection parameters

Parameter	Description
HTTPS Port	HTTPS communication port. The default value setting is 443. You can enter
ппезеон	the value according to your actual situation.

<u>Step 3</u> Click **Apply** to complete the settings.

### 5.15.1.3 Configuring Wi-Fi Connection Settings

You can make wireless connection between the Device and the other devices in the same network through Wi-Fi settings, facilitating the devices connection and mobility.

 $\square$ 

Only the Device with Wi-Fi module supports this function.

<u>Step 1</u> Select Main Menu > NETWORK > Wi-Fi.

🛞 NETWORK	<b>=</b> 🍪	in 🚑 🛤 🔿	<b>L</b> o	LIVE 💄 🗗 🛛 🖽

	Refresh			Apply Back

Figure 5-270 Wi-Fi

<u>Step 2</u> Configure the settings for the Wi-Fi connection parameters.

Table 5-49 Wi-Fi connection parameters

Parameter	Description			
Connect	Enable Connect Automatically.			
	After the Device is restarted, it will automatically connect to the nearest			
Automatically	hotspot that had been connected successfully.			
Refresh	Refresh the hotspot list. The self-adaption function such as adding			
Refresh	password is supported if such setting was once configured.			
	In the hotpots list, select a hotspot, and then click <b>Connect</b> .			
Connect	• To reconnect the same hotspot, disconnect first and then reconnect.			
Connect	• To connect to other hotspot, disconnect from the current connected			
	hotspot first, and then connect to the other hotspot.			
Disconnect	To disconnect from a hotspot, click <b>Disconnect</b> .			

<u>Step 3</u> Click **Apply** to complete the settings.

After the Device is connected to a Wi-Fi hotspot, in the **Wi-Fi Info** area, the current hotspot, IP address, subnet mask, and default gateway are displayed.

# 5.15.1.4 Configuring 3G/4G Settings

You can connect a wireless 3G/4G module to the USB port of the Device and then access the Device with the IP address provided by the module.

 $\square$ 

Not all models support this function.

<u>Step 1</u> Connect the wireless 3G/4G module to the USB port of the Device.

<u>Step 2</u> Select Main Menu > NETWORK > 3G/4G.

Figure 5-272 Wireless network

<u>Step 6</u> Click **Apply** to complete the settings.

# 5.15.1.5 Configuring PPPoE Settings

PPPoE is another way for the Device to access the network. You can establish network connection by configuring PPPoE settings to give the Device a dynamic IP address in the WAN. To use this function, firstly you need to obtain the user name and password from the Internet Service Provider. <u>Step 1</u> Select Main Menu > NETWORK > PPPoE.

Figure 5-273 PPPoE

	NETWORK	6 🙈	۵. ک	. <b>≜</b> ≎	LIVE 🚨 🔂	- 8
>						
	DDNS					
					Apply Bacl	۲.

- <u>Step 2</u> Enable the PPPoE function.
- <u>Step 3</u> In the **Username** box and **Password** box, enter the user name and password accordingly provided by the Internet Service Provider.
- <u>Step 4</u> Click **Apply** to complete the settings.

The system pops up a message to indicate the successfully saved. The IP address appears on the PPPoE page. You can use this IP address to access the Device.

 $\square$ 

When the PPPoE function is enabled, the IP address on the TCP/IP page cannot be modified.

# 5.15.1.6 Configuring DDNS Settings

When the IP address of the Device changes frequently, the DDNS function can dynamically refresh the correspondence between the domain on DNS and the IP address, ensuring you access the Device by using the domain.

### Preparation

Confirm if the Device supports the DDNS Type and log in the website provided by the DDNS service provider to register the information such as domain from PC located in the WAN.

 $\square$ 

After you have registered and logged in the DDNS website successfully, you can view the information of all the connected devices under this user name.

### Procedure

8.2

			XVR ALERT				
			TLS				
			120				
			60				
		Test				Apply	Back

<u>Step 2</u> Configure the settings for the email parameters.

Table 5-52	Email parameters	
------------	------------------	--

Parameter	Description
Enable	Enable the email function.
Lindble	There might be risk of sending data to specified email address after it is
	enabled.
SMTP Server	Enter the address of SMTP server of sender's email account.
Port	Enter the port value of SMTP server. The default value setting is 25. You
POIL	can enter the value according to your actual situation.
Username	Enter the user name and nassword of conder's email account
Password	Enter the user name and password of sender's email account.
Anonymous	If enable the anonymity function, you can login as anonymity.

Parameter	Description
Dessiver	In the <b>Receiver</b> list, select the number of receiver that you want to receive
Receiver	the notification. The Device supports up to three mail receivers.
Email Address	Enter the email address of mail receiver(s).
Sender	Enter the sender's email address. It supports maximum three senders
Sender	separated by comma.
	Enter the email subject.
Subject	Supports Chinese, English and numerals. It supports maximum 64
	characters.
Attachment	Enable the attachment function. When there is an alarm event, the system
Attachment	can attach snapshots as an attachment to the email.
	Select the encryption type: NONE, SSL, or TLS.
Encryption Type	
	For SMTP server, the default encryption type is <b>TLS</b> .
	This is the interval that the system sends an email for the same type of
	alarm event, which means, the system does not send an email upon any
Sending Interval (sec.)	alarm event.
Sending interval (sec.)	This setting helps to avoid the large amount of emails caused by frequent
	alarm events.
	The value ranges from 0 to 3600. 0 means that there is no interval.
Health Mail	Enable the health test function. The system can send a test email to check
	the connection.
Sending Interval (Min.)	This is the interval that the system sends a health test email.
Sending interval (Min.)	The value ranges from 30 to 1440. 0 means that there is no interval.
	Click Test to test the email sending function. If the configuration is correct,
Test	the receiver's email account will receive the email.
Test	
	Before testing, click <b>Apply</b> to save the settings.

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.15.1.8 Configuring UPnP Settings

You can map the relationship between the LAN and the WAN to access the Device on the LAN through the IP address on the WAN.

### Preparation

- Log in to the router to set the WAN port to enable the IP address to connect into the WAN.
- Enable the UPnP function at the router.
- Connect the Device with the LAN port on the router to connect into the LAN.
- Select **Main Menu > NETWORK > TCP/IP**, configure the IP address into the router IP address range, or enable the DHCP function to obtain an IP address automatically.

	extranet, proceed with caution.			
	Indicates the status of UPnP function.			
Status	Offline: Failed.			
	Online: Succeeded.			
LAN IP	Enter IP address of router on the LAN.			
	After mapping succeeded, the system obtains IP address automatically			
	without performing any configurations.			
WAN IP	Enter IP address of router on the WAN.			
	After mapping succeeded, the system obtains IP address automatically			
	without performing any configurations.			

Parameter	Description					
Port Mapping List	<ul> <li>The settings in PAT table correspond to the UPnP PAT table on the router.</li> <li>Service Name: Name of network server.</li> <li>Protocol: Type of protocol.</li> <li>Int. Port: Internal port that is mapped on the Device.</li> <li>Ext. Port: External port that is mapped on the router.</li> <li>To avoid the conflict, when setting the external port, try to use the ports from 1024 through 5000 and avoid popular ports from 1 through 255 and system ports from 256 through 1023.</li> <li>When there are several devices in the LAN, reasonably arrange the ports mapping to avoid mapping to the same external port.</li> <li>When establishing a mapping relationship, ensure the mapping ports are not occupied or limited.</li> <li>The internal and external ports of TCP and UDP must be the same and cannot be modified.</li> <li>Click to modify the external port.</li> </ul>					

<u>Step 3</u> Click **Apply** to complete the settings.

In the browser, enter http://WAN IP: External IP port. You can visit the LAN Device.

## 5.15.1.9 Configuring SNMP Settings

#### $\square$

#### Not all models support this function.

You can connect the Device with some software such as MIB Builder and MG-SOFT MIB Browser to manage and control the Device from the software.

### Preparation

- Install the software that can manage and control the SNMP, such as MIB Builder and MG-SOFT MIB Browser
- Obtain the MIB files that correspond to the current version from the technical support.

#### Procedure

<u>Step 1</u> Select Main Menu > NETWORK > SNMP.

		rigun	c 5 2,7 5						
	🛞 NETWORK	-	6 🛋	¢, (	∍	<b>L</b> o	LIVE	<b>±</b> G	i- 日
						✓ V3 (Recommended)

							Apply	Ba	ck

Figure 5-277 SNMP

<u>Step 2</u>	Configure the settings for the SNMP parameters.
---------------	---

Table 5-54 SNMP	parameters
	purumeters

Parameter	Description		
Enable	Enable the SNMP function.		
Version	Select the checkbox of SNMP version(s) that you are using.		
SNMP Port	Indicates the monitoring port on the agent program.		
Read Community Write Community	Indicates the read/write strings supported by the agent program.		
Trap Address	Indicates the destination address for the agent program to send the Trap information.		
Trap Port	Indicates the destination port for the agent program to send the Trap information.		
Read-Only Username	Enter the user name that is allowed to access the Device and has the "Read Only" permission.		
Read/Write Username	Enter the user name that is allowed to access the Device and has the "Read and Write" permission.		
Authentication Type	Includes MD5 and SHA. The system recognizes automatically.		
Authentication Password	Enter the password for authentication type and encryption type. The password should be no less than eight characters.		
Encryption Password	password should be no less than eight characters.		

Parameter	Description
Encryption	In the Encryption Type list, select an encryption type. The default
Encryption Type	setting is CBC-DES.

- <u>Step 3</u> Compile the two MIB files by MIB Builder.
- <u>Step 4</u> Run MG-SOFT MIB Browser to load in the module from compilation.
- <u>Step 5</u> On the MG-SOFT MIB Browser, enter the Device IP that you want to manage, and then select the version number to query.
- <u>Step 6</u> On the MG-SOFT MIB Browser, unfold the tree-structured directory to obtain the configurations of the Device, such as the channels quantity and software version.

### 5.15.1.10 Configuring Multicast Settings

When you access the Device from the network to view the video, if the access is exceeded, the video will not display. You can use the multicast function to group the IP to solve the problem.

#### <u>Step 1</u> Select Main Menu > NETWORK > Multicast.

NETWORK	-	3	ت، چ	<b>L</b> o	LIVE 1

P2P					
					Apply Back

Figure 5-278 Multicast

#### <u>Step 2</u> Configure the settings for the multicast parameters.

Table 5-55	Multicast	parameters
------------	-----------	------------

Parameter	Description
Enable	Enable the multicast function.
IP Address	Enter the IP address that you want to use as the multicast IP.
IP Address	The IP address ranges from 224.0.0.0 through 239.255.255.255.
Port	Enter the port for the multicast. The port ranges from 1025 through 65000.

You can use the multicast IP address to log in to the web.

On the web login dialog box, in the Type list, select MULTICAST. The web will automatically obtain the multicast IP address and join. Then you can view the video through multicast function.

### 5.15.2.2 Capturing Packet and Backing up

Packet capture means the operations such as capturing, resending, and editing data that are sent and received during network transmission. When there is network abnormality, you can perform packet capturing and back up into the USB storage device. This date can be provided to the technical support for analyzing the network condition.

<u>Step 1</u> Select Main Menu > MAINTAIN > Network > Test.

#### Figure 5-284 Test

Online User	Network Load	Test

🖻 схб				ā	
New Folder				OK I	Back

2) Select the route.

 $\square$ 

- If several USB storage devices are connected to the Device, you can select from the Device Name list.
- Click Refresh to total space, free space and the file list in the selected USB storage device.
- In the case of insufficient capacity, click to delete the needless files.
- Click New Folder to create a new folder in the USB storage device.
- 3) Click **OK** to save the route selection settings.

<u>Step 5</u> Click with to start packet capturing and backing up.

- - Only the data packet of one LAN can be captured at one time.
  - After capturing starts, you can exit the **Test** page to perform other operations such as web login and monitoring.

Step 6 Click

to stop capturing.

The backup data is saved in the selected route under the naming style "LAN name-time.pcap." You can open it by using Wireshark software.

# 5.16 Configuring Account Settings

You can add, modify and delete user accounts, groups, and ONVIF users, and set security questions for admin account.

 $\square$ 

• The user name supports 31 characters and group name supports 15 characters. The user name can be consisted of letter, number, "\_", "@", "...

- You can set maximum 64 users and 20 groups. The group name by "User" and "Admin" cannot be deleted. You can set other groups and define the relevant permissions. However, the admin account cannot be set randomly.
- You can manage the account by user and group and the name cannot be repeated. Every user must belong to a group, and one user only belongs to one group.

# 5.16.1 Configuring User Account

## 5.16.1.1 Adding a User Account

#### <u>Step 1</u> Select Main Menu > ACCOUNT > User.

00:00 - 24:00	None	• 6	60 min.	0	Mic

<u>Step 2</u>	Configure the set	tings for the schedule	parameters.
---------------	-------------------	------------------------	-------------

Figure 5-305 Schedule parameters

Parameter	Description
	In the <b>Period</b> box, enter the time. Select the checkbox to enable the
Period	settings.
	You can configure up to six periods.
File Name	In the File Name list, select the audio file that you want to play for this
	configured period.
Interval	In the Interval box, enter the time in minutes for how often you want to
Interval	repeat the playing.
Popost	Configure how many times you want to repeat the playing in the defined
Repeat	period.
Output Port	Includes two options: MIC and Audio. It is MIC by default. The MIC function
Output Port	shares the same port with talkback function and the latter has the priority.

The finish time for audio playing is decided by audio file size and the configured interval.

Playing priority: Alarm event > Talkback > Trial listening > Audio file.

<u>Step 3</u> Click **Apply** to complete the settings.

# 5.18 Storage Management

Storage management function manages the stored resources such as recorded video files and storage space. The function aims at providing easier operation and improving the storage efficiency.

# 5.18.1 Configuring Basic Settings

<u>Step 1</u> Select Main Menu > STORAGE > Basic.

Figure 5-306 Basic

	STORAGE	-	6	🚔 🌣	▣	<b>L</b> o		LIVE	1 G. H
>				Overwrite					
		Create Video Files		Time Length			60		
	Disk Manager	Delete Expired Files		Never			00		
		Delete Expired Piles		Never					
								Apply	Back

<u>Step 2</u> Configure the settings for the basic settings parameters.

Table 5-60 Basic settings parameters	5
--------------------------------------	---

Parameter	Description					
Disk Full	<ul> <li>Configure the settings for the situation all the read/write discs are full.</li> <li>Select Stop to stop recording</li> <li>Select Overwrite to overwrite the recorded video files always from the earliest time.</li> </ul>					
Create Video Files	Configure the time length and file length for each recorded video.					
Delete Expired Files	Configure whether to delete the old files and if yes, configure the days.					

# 5.18.2 Configuring the Recording and Snapshot Schedule

The system starts recording and taking snapshot according to the configured schedule. For details, see "5.1.4.9 Configuring Recorded Video Storage Schedule" and "5.1.4.10 Configuring Snapshot Storage Schedule."

# 5.18.3 Configuring Disk Manager

You can view the HDD information, format HDD, and configure the HDD type through HDD manager. <u>Step 1</u> Select Main Menu > STORAGE > Disk Manager.

In the table, you can view the information of current HDD, such as device name, HDD type, status, total space and free space, and serial number of the HDD port.

Figure 5-307 Disk manager

## 5.18.7 Configuring HDD Detecting Settings

 $\square$ 

Not all models support this function.

HDD detecting function detects the current status of HDD to let you know the HDD performance and replace the defective HDD.

### 5.18.7.1 Checking HDD

You can detect HDD by key area detect and global detect.

- Key area detect: Detect the files saved in HDD. The detected bad track can be repaired by formatting. If there are no files in HDD, the system cannot detect the bad track.
- Global detect: Detect the whole HDD through Windows, which takes time and might affect the HDD that is recording the video.

#### <u>Step 1</u> Select Main Menu > STORAGE > Disk Check > Manual Check.

	STORAGE	1.0	<b>•</b> 4	🖻 🦲 🗱	▣	20	LIVE 💄 🗗 - 🔡
		Manual Cl	heck Check Re

						ок в	ad 🧧 Blocked
						= 0 MB otal Checked	
						'otal Space	0.00 GB
`						hecking Disk	
	Rec Estimate						

Figure 5-315 Manual check

- <u>Step 2</u> In the **Type** list, select **Key Area Detect** or **Global Check**; and in the **Disk** list, select the HDD that you want to detect.
- Step 3 Click Start Check.

The system starts detecting the HDD.

During detecting, click **Pause** to pause detecting, click **Continue** to restart detecting, and click **Stop Detect** to stop detecting.

### Figure 5-325 FTP

### <u>Step 2</u> Configure the settings for the FTP settings parameters.

#### Table 5-61 FTP settings parameters

Parameter	Description		
Enable	Enable the FTP upload function.		
FTP type	FTP: Plaintext transmission.		
Пттуре	SFTP: Encrypted transmission (recommended)		
Server Address	IP address of FTP server.		
Port	• FTP: The default is 21.		
POIL	• SFTP: The default is 22.		
Anonymous	Enter the user name and password to log in to the FTP server.		
Username	Enable the anonymity function, and then you can login anonymously		
Password	without entering the user name and password.		
	Create folder on FTP server.		
	• If you do not enter the name of remote directory, system		
Storago Path	automatically creates the folders according to the IP and time.		
Storage Path	If you enter the name of remote directory, the system creates the		
	folder with the entered name under the FTP root directory first, and		
	then automatically creates the folders according to the IP and time.		

Parameter	Description
File Size	<ul> <li>Enter the length of the uploaded recorded video.</li> <li>If the entered length is less than the recorded video length, only a section of the recorded video can be uploaded.</li> <li>If the entered length is more than the recorded video length, the whole recorded video can be uploaded.</li> <li>If the entered length is 0, the whole recorded video will be uploaded.</li> </ul>
Picture Upload Interval (Sec.)	<ul> <li>If this interval is longer than snapshot interval, the system takes the recent snapshot to upload. For example, the interval is 5 seconds, and snapshot interval is 2 seconds per snapshot, the system uploads the recent snapshot every 5 seconds.</li> <li>If this interval is shorter than snapshot interval, the system uploads the snapshot per the snapshot interval. For example, the interval is 5 seconds, and snapshot interval is 10 seconds per snapshot, the system uploads the snapshot every 10 seconds.</li> <li>To configure the snapshot interval, select Main Menu &gt; CAMERA &gt; Encode &gt; Snapshot.</li> </ul>
Channel	Select the channel that you want to apply the FTP settings.
Day	Select the week day and set the time period that you want to upload the
Period 1, Period 2	recorded files. You can set two periods for each week day.
Record type	Select the record type (Alarm, Intel, MD, and General) that you want to upload. The selected record type will be uploaded during the configured time period.

Step 3 Click Test.

The system pops up a message to indicate success or failure. If failed, check the network connection or configurations.

<u>Step 4</u> Click **Apply** to complete the settings.

# 5.19 Security Center

You can set security options to strengthen device security and use the device in a much safer way.

## 5.19.1 Security Status

Security scanning helps get a whole picture of device security status. You can scan user, service and security module status for detailed information about the security status of the device.

### **Detecting User and Service**

 $\square$ 

Green icon represents a healthy status of the scanned item, and orange icon represents a risky status.

• Login authentication: When there's a risk in the login authentication, the icon will be in orange to warn risk. You can click **Details** to see the detailed risk description.

• Configuration Security: When there's a risk in the device configuration, the icon will be in orange

to warn risk. You can click **Details** to see the detailed risk description.

#### Scanning Security Modules

This area shows the running status of security modules. For details about the security modules, move mouse pointer on the icon to see the on-screen instructions.

#### Scanning Security Status

You can click **Rescan** to scan security status.

## 5.19.2 System Service

You can set DVR basic information such as basic services, 802.1x and HTTPS.

### 5.19.2.1 Basic Services

<u>Step 1</u> Select Main Menu > SECURITY > System Service > Basic Services.

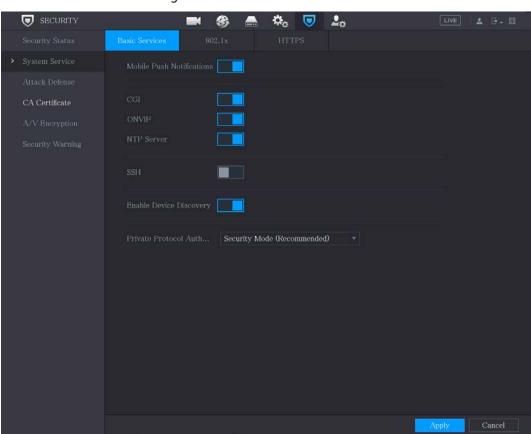

Figure 5-327 Basic services

<u>Step 2</u> Select **Basic Services** and configure parameters.

There might be safety risk when **Mobile Push Notifications, CGI, ONVIF, SSH** and **NTP Server** is enabled.

Parameter	Description		
Mobile Push Notifications	<ul> <li>After enabling this function, the alarm triggered by the NVR can be pushed to a mobile phone. This function is enabled by default.</li> <li>There might be safety risk if this service is enabled. Disable this function when it is not in use.</li> </ul>		
CGI	If this function is enabled, the remote devices can be added through the CGI protocol. This function is enabled by default.		

Table 5-62 Basic services parameters

Parameter	Description		
ONVIF	If this function is enabled, the remote devices can be added through the ONVIF protocol. This function is enabled by default. There might be safety risk if this service is enabled. Disable this function when it is not in use.		
NTP Server	After enabling this function, a NTP server can be used to synchronize the device. This function is enabled by default.		
SSH	After enabling this function, you can use SSH service. This function is disabled by default.		
Enable Device Discovery	After enabling this function, the device can be searched by other devices.		
Private Protocol Authentication Mode	<ul> <li>Security Mode (Recommended): Uses Digest access authentication when connecting to DVR.</li> <li>Compatible Mode: Select this mode when the client does not support Digest access authentication.</li> </ul>		

<u>Step 3</u> Click **Apply** to complete the settings.

### 5.19.2.2 802.1x

The device needs to pass 802.1x certification to enter the LAN.

<u>Step 1</u> Select Main Menu > SECURITY > System Service > 802.1x.

- <u>Step 2</u> Select **Enable** to enable HTTPS function.
- <u>Step 3</u> Click **Certificate Management** to create or import a HTTPS certificate from USB drive. For details about importing or creating a CA certificate, see 5.19.4.
- <u>Step 4</u> Select a HTTPS certificate.
- <u>Step 5</u> Click **Apply** to complete the settings.

### 5.19.3 Attack Defense

### 5.19.3.1 Firewall

- <u>Step 1</u> Select Main Menu > SECURITY > Attack Defense > Firewall.
- <u>Step 2</u> Select **Enable** to enable firewall.
- <u>Step 3</u> Configure the parameters.

Table 5-64 Firewall parameters

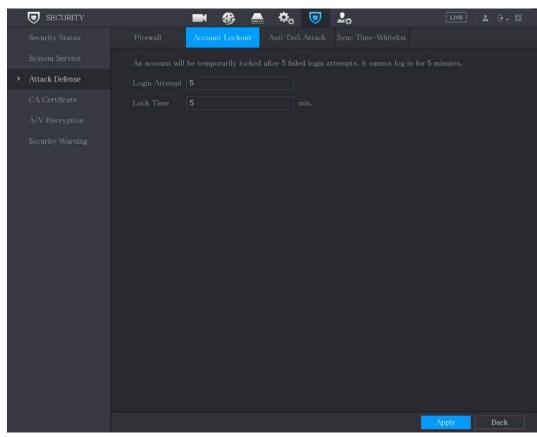

Parameter	Description		
	Mode can be configured when Type is Network Access.		
	If Allowlist is enabled, you can visit device port successfully with		
Mode	IP/MAC hosts in the allowlist.		
	<ul> <li>If Blocklist is enabled, you cannot visit device port with IP/MAC hosts in blocklist.</li> </ul>		
Add	When Type is Network Access, you can configure IP Address, IP Segment and MAC Address.		
Туре	You can select IP address, IP segment and MAC address.		
IP Address	Enter IP Address, Start Port and End Port that is allowed or forbidden.		
Start Port			
End Port	When Type is IP Address, they can be configured. Start Port and End Port can be configured only in Network Access Type.		
	Enter Start Address and End Address of IP Segment.		
Start Address/End Address			
	When Type is IP Segment, they can be configured.		
	Enter MAC Address that is allowed or forbidden		
MAC Address			
	When Type is MAC Address, it can be configured.		

<u>Step 4</u> Click **Apply** to complete the settings.

### 5.19.3.2 Account Lockout

<u>Step 1</u> Select Main Menu > SECURITY > Attack Defense > Account Lockout.

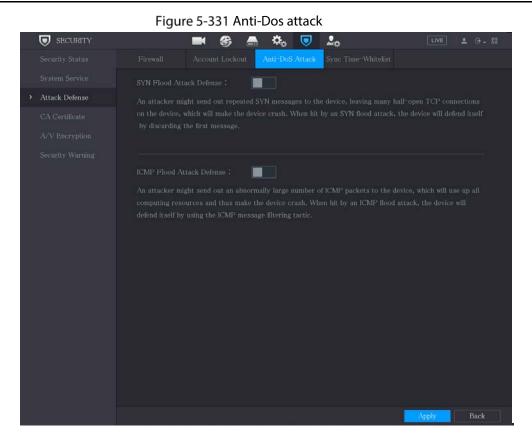

Parameter	Description		
Attempt(s)	Set the maximum number of allowable wrong password entries. The account will be locked after your entries exceed the maximum number. Value range: 5–30. Default value: 5.		
Lock Time	Set how long the account is locked for. Value range: 5–120 minutes. Default value: 5 minutes.		

<u>Step 3</u> Click **Apply** to complete the settings.

### 5.19.3.3 Anti-Dos Attack

You can enable SYN Flood Attack Defense and ICMP Flood Attack Defense to defend the device against Dos attack.

### 5.19.3.4 Sync Time-Allowlist

### $\square$

The synchronization is only allowed with hosts in the trusted list.

- <u>Step 1</u> Select Main Menu > SECURITY > Attack Defense > Sync Time-Allowlist.
- <u>Step 2</u> Select **Enable** to enable **Sync Time-Allowlist** function.
- <u>Step 3</u> Configure the parameters.

Parameter	Description			
Add	You can add trusted hosts for time synchronization.			
Туре	Select IP address or IP segment for hosts to be added.			
IP Address	Input the IP address of a trusted host. When Type is IP Address, it can be configured			
Start Address	Input the start IP address of trusted hosts.			

Parameter	Description
End Address	Input the end IP address of trusted hosts.
	When Type is IP Segment, it can be configured

<u>Step 4</u>	Click <b>Apply</b> to complete the settings.
---------------	--

## 5.19.4 CA Certificate

You can create or import device certificate and install trusted CA Certificate.

### 5.19.4.1 Device Certificate

Create Certificate

<u>Step 1</u> Select Main Menu > SECURITY > CA Certificate > Device Certificate.

- Click I to download the certificate to local storage.
- Click i to delete the certificate. The deleted certificate cannot be restored, proceed with caution.

	• Protocol COM: Configure the function to protocol COM, in order to overlay		
	card number.		
	PTZ Matrix: Connect matrix control.		
	It is <b>Console</b> by default.		
Baud Rate	Select Baud rate, which is 115200 by default.		
Data Bits	It ranges from 5 to 8, which is 8 by default.		
Stop Bits	It includes 1 and 2.		
Parity	It includes none, odd, even, mark and null. It is none by default.		

## 5.20.3 Configuring System Maintenance Settings

When the Device has been running for a long time, you can configure the auto reboot when the Device is not working. You can also configure the case fan mode to reduce noise and extend the service life. <u>Step 1</u> Select Main Menu > MAINTAIN > Manager > Maintenance.

	rige	10-2-2-2-2101	uniteriunee		
	🕺 💄	<u> </u>	S 🔿	🗘 💂 ଜ	LIVE 🛓 🔂 - 🔡

Step 2	Configure the	settings for t	he system	maintenance	parameters.

Table 5-73 l	Maintenance	parameters
--------------	-------------	------------

Parameter	Description
Auto Reboot	In the Auto Reboot list, select the reboot time.
Case Fan Mode	In the Case Fan Mode list, you can select Always or Auto. If you select
	Auto, the case fan will stop or start according to the external conditions
	such as the Device temperature.
	Not all models support this function, and it is only supported on the
	local configuration page.

<u>Step 3</u> Click **Apply** to complete the settings.

## 5.20.4 Exporting and Importing System Settings

You can export or import the Device system settings if there are several Devices that require the same setup.

 $\square$ 

- The IMP/EXP page cannot be opened if the backup operation is ongoing on the other pages.
- When you open the IMP/EXP page, the system refreshes the devices and sets the current directory as the first root directory.
- Click Format to format the USB storage device.

### Exporting System Settings

Log Maintenance Import/Export Default Update	1 G- 8

#### Figure 5-345 Connected device

#### Step 4 Click Export.

There is a folder under the name style of "Config\_[YYYYMMDDhhmmss]". Double-click this folder to view the backup files.

### Importing System Settings

- <u>Step 1</u> Insert a USB storage device containing the exported configuration files from another Device) into one of the USB ports on the Device.
- <u>Step 2</u> Select Main Menu > SYSTEM > Import/Export.
- <u>Step 3</u> Click **Refresh** to refresh the page.
- <u>Step 4</u> Click on the configuration folder (under the name style of "Config\_[YYYYMMDDhhmmss]") that you want to import.
- Step 5 Click Import.

The Device will reboot after the imported is succeeded.

## 5.20.5 Restoring Default Settings

 $\square$ 

Only Admin account supports this function.

You can select the settings that you want to restore to the factory default.

<u>Step 1</u> Select Main Menu > MAINTAIN > Manager > Default.

Figure 5-346 Default

					Back

<u>Step 2</u> Restore the settings.

- Click **Default** to restore all parameters to default settings except parameters such as network, user management.
- Click **Factory Default**, select **OK** and then enter the password of admin user in the prompted dialog box to completely recover device parameters to factory default.

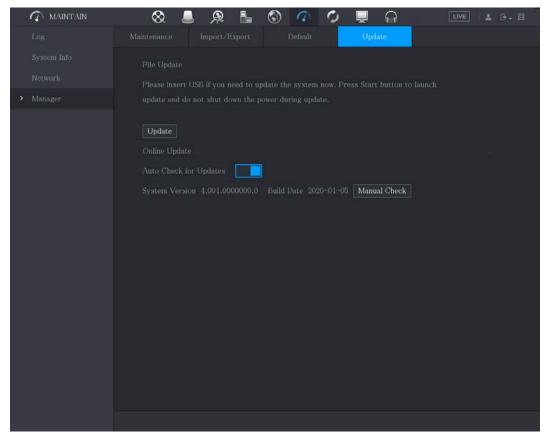

## 5.20.6 Updating the Device

### 5.20.6.1 Updating File

- <u>Step 1</u> Insert a USB storage device containing the upgrade files into the USB port of the Device.
- <u>Step 2</u> Select Main Menu > MAINTAIN > Manager > Update.

#### Figure 5-347 Update

Step 3 Click Update.

Figure 5-348 Browse

📮 ipc				亩	
File Name					

- <u>Step 4</u> Click the file that you want to upgrade.
- Step 5 Click OK.

### 5.20.6.2 Performing Online Upgrade

When the Device is connected to Internet, you can use online upgrade function to upgrade the system.

Before using this function, you need to check whether there is any new version by auto check or manual check.

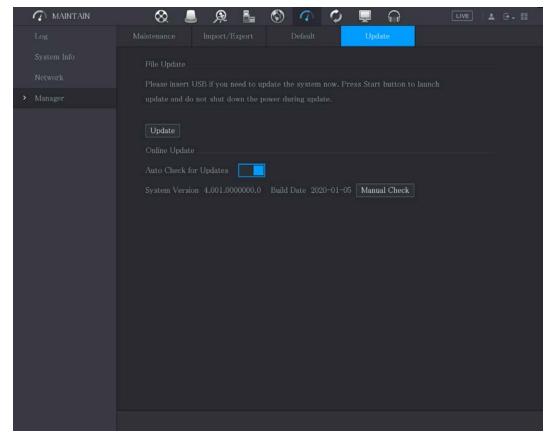

- Auto check: The Device checks if there is any new version available at intervals.
- Manual check: Perform real-time check whether there is any new version available.

Ensure the correct power supply and network connection during upgrading; otherwise the upgrading might be failed.

```
<u>Step 1</u> Select Main Menu > MAINTAIN > Manager > Update.
```

Figure 5-349 Update

<u>Step 2</u> Check whether there is any new version available.

- Auto check: Enable Auto-check for updates.
- Manual check: Click Manual Check.

The system starts checking the new versions. After checking is completed, the check result is displayed.

- If the "It is the latest version" text is displayed, you do not need to upgrade.
- If the text indicating there is a new version, go the step 3.

Step 3 Click Upgrade now.

### 5.20.6.3 Uboot Upgrading

 $\wedge$ 

- Under the root directory in the USB storage device, there must be "u-boot.bin.img" file and "update.img" file saved, and the USB storage device must be in FAT32 format.
- Make sure the USB storage device is inserted; otherwise the upgrading cannot be performed.

When starting the Device, the system automatically checks whether there is a USB storage device connected and if there is any upgrade file, and if yes and the check result of the upgrade file is correct, the system will upgrade automatically. The Uboot upgrade can avoid the situation that you have to upgrade through +TFTP when the Device is halted.

## 5.20.7 Exporting Intelligent Diagnosis Data

When an error occurs, go to **Main Menu > MAINTAIN > Intelligent Diagnosis** to export intelligent diagnosis data for troubleshooting. The maintenance tasks, such as the import and export of configuration, can be performed in COS Pro Portal. For details, see the corresponding user's manual.

## 5.21 Viewing Information

You can view the information such as log information, HDD information, and version details

## 5.21.1 Viewing Version Details

You can view the version details such as device model, system version, and build date. Select Main Menu > INFO > VERSION.

Figure 5-350 Version

## 5.21.2 Viewing Log Information

You can view and search the log information.

 $\square$ 

- If there is HDD installed, the logs about system operations are saved in the memory of the Device • and other types of logs are saved into the HDD. If there is no HDD installed, the other types of logs are also saved in the memory of the Device.
- When formatting the HDD, the logs will not be lost. However, if you take out the HDD from the • Device, the logs might be lost.

<u>Step 1</u> Select Main Menu > INFO > LOG.

## 5.22 Logging out of the Device

On the top right of the Main Menu page or on any page after you have entered the Main Menu, click

- Select Logout, you will log out the device.
- Select **Reboot**, the Device will be rebooted.
- Select **Shutdown**, the Device will be turned off.

# **6** Web Operations

### $\square$

- The pages in the Manual are used for introducing the operations and only for reference. The actual page might be different dependent on the model you purchased. If there is inconsistency between the Manual and the actual product, the actual product shall govern.
- The Manual is a general document for introducing the product, so there might be some functions described for the Device in the Manual not apply to the model you purchased.
- Besides Web, you can use our Smart PSS to log in to the device. For detailed information, refer to Smart PSS user's manual.

## 6.1 Connecting to Network

- The factory default IP of the Device is 192.168.1.108.
- The Device supports monitoring on different browsers such as Safari, fire fox, Google on Apple PC to perform the functions such as multi-channel monitoring, PTZ control, and device parameters configurations.
- <u>Step 1</u> Check to make sure the Device has connected to the network.
- <u>Step 2</u> Configure the IP address, subnet mask and gateway for the PC and the Device. For details about network configuration of the Device, see "5.1.4.4 Configuring Network Settings."
- <u>Step 3</u> On your PC, check the network connection of the Device by using "ping \*\*\*.\*\*\*.\*\*\*. Usually the return value of TTL is 255.

## 6.2 Logging in to the Web

<u>Step 1</u> Open the IE browser, enter the IP address of the Device, and then press Enter. The Login in dialog box is displayed.

Figure 6-1 Login	
	Web Login
<b>ن</b>	
A	
ТСР	
Login	

<u>Step 2</u> Enter the user name and password.

 $\square$ 

- The default administrator account is **admin**. The password is the one that was configured during initial settings. To security your account, it is recommended to keep the password properly and change it regularly.
- Click local to display the password.

Step 3 Click Login.

## 6.3 Introducing Web Main Menu

After you have logged in the web, the main menu is displayed.

Figure 6-2 Main menu

Table 6-1 Main menu description

No.	lcon	Description

# 7 FAQ

# 1. DVR cannot boot up properly.

There are following possibilities:

- Input power is not correct.
- Power connection is not correct.
- Power switch button is damaged.
- Program upgrade is wrong.
- HDD malfunction or something wrong with HDD jumper configuration.
- Seagate DB35.1, DB35.2, SV35 or Maxtor 17-g has compatibility problem. Upgrade to the latest version to solve this problem.
- Front panel error.
- Main board is damaged.

# 2. DVR frequently shuts down or stops running.

There are following possibilities:

- Input voltage is not stable or it is too low.
- HDD malfunction or something wrong with jumper configuration.
- Button power is not enough.
- Front video signal is not stable.
- Working environment is too harsh, too much dust.
- Hardware malfunction.

# 3. Hard disk cannot be detected.

There are following possibilities:

- HDD is broken.
- HDD jumper is damaged.
- HDD cable connection is loose.
- Main board SATA port is broken.

# 4. There is no video output whether it is one-channel, multiple-channel or all-channel output.

There are following possibilities:

- Program is not compatible. Upgrade to the latest version.
- Brightness is 0. Restore factory default setup.
- There is no video input signal or it is too weak.
- Check privacy mask setup or your screen saver.
- DVR hardware malfunctions.

# 5. Real-time video color is distorted.

There are following possibilities:

- When using BNC output, NTSC and PAL setup is not correct. The real-time video becomes black and white.
- DVR and monitor resistance is not compatible.
- Video transmission is too long or degrading is too huge.
- DVR color or brightness setup is not correct.

# 6. Cannot search local records.

- HDD jumper is damaged.
- HDD is broken.
- Upgraded program is not compatible.
- The recorded file has been overwritten.
- Record function has been disabled.

# 7. Video is distorted when searching local records.

There are following possibilities:

- Video quality setup is too low.
- Program read error, bit data is too small. There is mosaic in the full screen. Restart the DVR to solve this problem.
- HDD data jumper error.
- HDD malfunction.
- DVR hardware malfunctions.

# 8. No audio under monitor state.

There are following possibilities:

- It is not a power picker.
- It is not a power acoustics.
- Audio cable is damaged.
- DVR hardware malfunctions.

# 9. There is audio under monitor state but no audio under playback state.

There are following possibilities:

- Setup is not correct. Enable audio function.
- Corresponding channel has no video input. Playback is not continuous when the screen is blue.

# 10. System time is not correct.

There are following possibilities:

- Setup is not correct.
- Battery contact is not correct or voltage is too low.
- Crystal oscillator is broken.

# 11. Cannot control PTZ on DVR.

There are following possibilities:

- Front panel PTZ error.
- PTZ decoder setup, connection or installation is not correct.
- Cable connection is not correct.
- PTZ setup is not correct.
- PTZ decoder and DVR protocol is not compatible.
- PTZ decoder and DVR address is not compatible.
- When there are several decoders, add 120 Ohm between the PTZ decoder A/B cables furthest end to delete the reverberation or impedance matching. Otherwise the PTZ control is not stable.
- The distance is too far.

# 12. Motion detection function does not work.

- Period setup is not correct.
- Motion detection zone setup is not correct.
- Sensitivity is too low.

• For some versions, there is hardware limit.

# 13. Cannot log in client-end or web.

There are following possibilities:

- For Windows 98 or Windows ME user, update your system to Windows 2000 sp4. Or you can install client-end software of lower version. Note right now, our DVR is not compatible with Windows VISTA control.
- ActiveX control has been disabled.
- No dx8.1 or higher. Upgrade display card driver.
- Network connection error.
- Network setup error.
- Password or user name is invalid.
- Client-end is not compatible with DVR program.

# 14. There is only mosaic no video when preview or playback video file remotely.

There are following possibilities:

- Network fluency is not good.
- Client-end resources are limit.
- There is multiple-cast group setup in DVR. This mode can result in mosaic. Usually we do not recommend this mode.
- There is privacy mask or channel protection setup.
- Current user has no right to monitor.
- DVR local video output quality is not good.

# 15. Network connection is not stable.

There are following possibilities:

- Network is not stable.
- IP address conflict.
- MAC address conflict.
- PC or DVR network card is not good.

# 16. Burn error /USB back error.

There are following possibilities:

- Burner and DVR are in the same data cable.
- System uses too much CPU resources. Stop record first and then begin backup.
- Data amount exceeds backup device capacity. It might result in burner error.
- Backup device is not compatible.
- Backup device is damaged.

# 17. Keyboard cannot control DVR

There are following possibilities:

- DVR serial port setup is not correct.
- Address is not correct.
- When there are several switchers, power supply is not enough.
- Transmission distance is too far.

# 18. Alarm signal cannot be disarmed.

- Alarm setup is not correct.
- Alarm output has been open manually.

- Input device error or connection is not correct.
- Some program versions might have this problem. Upgrade your system.

#### 19. Alarm function is null.

There are following possibilities:

- Alarm setup is not correct.
- Alarm cable connection is not correct.
- Alarm input signal is not correct.
- There are two loops connect to one alarm device.

#### 20. Remote control does not work.

There are following possibilities:

- Remote control address is not correct.
- Distance is too far or control angle is too small.
- Remote control battery power is low.
- Remote control is damaged or DVR front panel is damaged.

# 21. Record storage period is not enough.

There are following possibilities:

- Camera quality is too low. Lens is dirty. Camera is installed against the light. Camera aperture setup is not correct.
- HDD capacity is not enough.
- HDD is damaged.

#### 22. Cannot playback the downloaded file.

- There are following possibilities:
- There is no media player.
- No DXB8.1 or higher graphic acceleration software.
- There is no DivX503Bundle.exe control when you play the file transformed to AVI via media player.
- No DivX503Bundle.exe or ffdshow-2004 1012 .exe in Windows XP OS.

#### 23. Forgot local menu operation password or network password

Contact your local service engineer or our sales person for help. We can guide you to solve this problem.

# 24. When I login via HTTPS, a dialogue says the certificate for this website is for other address.

Create server certificate again.

# 25. When I login via HTTPS, a dialogue says the certificate is not trusted.

Download root certificate again.

#### 26. When I login via HTTPS, a dialogue says the certificate has expired or is not valid yet.

Make sure your PC time is the same as the device time.

# 27. I connect the general analog camera to the device, there is no video output.

There are following possibilities:

- Check camera power supplying, data cable connection and other items.
- This series device does not support the analog camera of all brands. Make sure the device supports general standard definition analog camera.

# 28. I connect the standard definition analog camera or the coaxial camera to the device, there is no video output.

There are following possibilities:

• Check camera power supplying, or camera data cable connection.

• For the product supports analog standard definition camera/HD camera, you need to go to the **Main Menu > CAMERA > CHANNEL TYPE** to select corresponding channel type and then restart the DVR.

# 29. I cannot connect to the IP channel.

There are following possibilities:

- Check the camera is online or not.
- Check IP channel setup is right or not (such as IP address, user name, password, connection protocol, and port number).
- The camera has set the allowlist (Only the specified devices can connect to the camera).

# 30. After I connected to the IP channel, the one-window output is OK, but there is no multiple-window output.

There are following possibilities:

- Check the sub stream of the camera has been enabled or not.
- Check the sub stream type of the camera is H.264 or not.
- Check the device supports camera sub stream resolution or not (such as 960H, D1, and HD1).

# 31. After I connected to the IP channel, the multiple-window output is OK, but there is no one-window output.

There are following possibilities:

- Check there is video from the IP channel or not. Go to the **Main Menu > INFO > BPS** to view bit stream real-time information.
- Check the main stream of the camera has been enabled or not.
- Check the main stream type of the camera is H.264 or not.
- Check the device supports camera main stream resolution or not (such as 960H, D1, and HD1).
- Check camera network transmission has reached the threshold or not. Check the online user of the camera.

# 32. After I connected to the IP channel, there is no video output in the one-window or the multiplewindow mode. But I can see there is bit stream.

There are following possibilities:

- Check the main stream/sub stream type of the camera is H.264 or not.
- Check the device supports camera main stream/sub stream resolution or not (such as 1080P, 720P, 960H, D1, and HD1).
- Check the camera setup. Make sure It supports the products of other manufacturers.

# 33. DDNS registration failed or cannot access the device domain name.

There are following possibilities:

- Check the device is connected to the WAN. Check the device has got the IP address if the PPPoE can dial. If there is a router, check the router to make sure the device IP is online.
- Check the corresponding protocol of the DDNS is enabled. Check the DDNS function is OK or not.
- Check DNS setup is right or not. Default Google DNS server is 8.8.8.8, 8.8.5.5. You can use different DNS provided by your ISP.

# 34. I cannot use the P2P function on my cell phone or the web.

- Check the device P2P function is enabled or not. (Main menu->Setting->Network->P2P)
- Check the device is in the WAN or not.
- Check cell phone P2P login mode is right or not.

- It is the specified device P2P login port or not when you are using P2P client.
- Check user name or password is right or not.
- Check P2P SN is right or not. You can use the cell phone to scan the QR code on the device P2P page (Main Menu > Network > P2P), or you can use the version information of the WEB to confirm. (For some previous series products, the device SN is the main board SN, it might result in error.)

#### 35. I connect the standard definition camera to the device, there is no video output.

There are following possibilities:

- Check the DVR supports standard definition signal or not. Only some series product supports analog standard definition signal, coaxial signal input.
- Check channel type is right or not. For the product supports analog standard definition camera/HD camera, you need to go to the Main Menu > CAMERA > CHANNEL TYPE to select corresponding channel type (such as analog) and then restart the DVR. In this way, the DVR can recognize the analog standard definition.
- Check camera power supplying, or camera data cable connection.

#### 36. I cannot connect to the IP camera.

There are following possibilities:

- Check DVR supports IP channel or not. Only some series products support A/D switch function, it can switch analog channel to the IP channel to connect to the IP camera. From Main Menu > CAMERA > CHANNEL TYPE, select the last channel to switch to the IP channel. Some series product products support IP channel extension, it supports N+N mode.
- Check the IPC and the DVR is connected or not. Go to the Main Menu > CAMERA > REGISTRATION to search to view the IP camera is online or not. Or you can go to the Main Menu > INFO > NETWORK > Network Test, you can input IP camera IP address and then click the Test button to check you can connect to the IP camera or not.
- Check IP channel setup is right or not (such as IP address, manufacturer, port, user name, password, and remote channel number).

# Daily Maintenance

- Use the brush to clean the board, socket connector and the chassis regularly.
- The device shall be soundly earthed in case there is audio/video disturbance. Keep the device away from the static voltage or induced voltage.
- Unplug the power cable before you remove the audio/video signal cable, RS-232 or RS-485 cable.
- Do not connect the TV to the local video output port (VOUT). It might result in video output circuit.
- Always shut down the device properly. Use the shutdown function in the menu, or you can press the power button in the front panel for at least three seconds to shut down the device. Otherwise it might result in HDD malfunction.
- Make sure the device is away from the direct sunlight or other heating sources. Keep the sound ventilation.
- Check and maintain the device regularly.

# Appendix 1 Glossary

The abbreviations in this glossary are related to the Manual.

Appendix Table 1-1 Glossary

Abbreviations	Full term	
BNC	Bayonet Nut Connector	
CBR	Constant Bit Rate	
CIF	Common Intermediate Format	
DDNS	Dynamic Domain Name Service	
DHCP	Dynamic Host Configuration Protocol	
DNS	Domain Name System	
DST	Daylight Saving Time	
DVR	Digital Video Recorder	
FTP	File Transfer Protocol	
HDD	Hard Disk Drive	
HDMI	High Definition Multimedia Interface	
НТТР	Hyper Text Transfer Protocol	
loT	Internet of Things	
IP	Internet Protocol	
IVS	Intelligent Video System	
LAN	Local Area Network	
MAC	Media Access Control	
MTU	Maximum Transmission Unit	
NTP	Network Time Protocol	
NTSC	National Television Standards Committee	
ONVIF	Open Network Video Interface Forum	
PAL	Phase Alteration Line	
PAT	Port Address Translation	
POS	Point of Sale	
PPPoE	Point-to-Point Protocol over Ethernet	
PSS	Professional Surveillance Software	
PTZ	Pan Tilt Zoom	
RCA	Radio Corporation of American	
RTSP	Real Time Streaming Protocol	
S.M.A.R.T	Self-Monitoring-Analysis and Reporting Technology	
SATA	Serial Advanced Technology Attachment

UDP	User Datagram Protocol	
UPnP	Universal Plug and Play	

Abbreviations	Full term
VBR	Variable Bit Rate
VGA	Video Graphics Array
WAN	Wide Area Network

# Appendix 2 HDD Capacity Calculation

Calculate total capacity needed by each DVR according to video recording (video recording type and video file storage time).

<u>Step 1</u> According to Formula (1) to calculate storage capacity  $q_i$  that is the capacity of each channel needed for each hour, unit MB.

Formula (1): 
$$q_i = d_i \div 8 \times 3600 \div 1024$$

In the formula:  $d_i$  means the bit rate, unit Kbit/s

<u>Step 2</u> After video time requirement is confirmed, according to Formula (2) to calculate the storage capacity  $m_i$ , which is storage of each channel needed unit MB.

Formula (2): 
$$m_i = q_i \times h_i \times D_i$$

In the formula:

- $h_i$  means the recording time for each day (hour)
- $D_i$  means number of days for which the video shall be kept
- <u>Step 3</u> According to Formula (3) to calculate total capacity (accumulation)  $q_T$  that is needed for all channels in the DVR during **scheduled video recording**.

Formula (3): 
$$q_T = \sum_{i=1}^{c} m_i$$

In the formula: c means total number of channels in one DVR

<u>Step 4</u> According to Formula (4) to calculate total capacity (accumulation)  $q_T$  that is needed for all channels in DVR during **alarm video recording (including motion detection)**.

Formula (4): 
$$q_T = \sum_{i=1}^c m_i \times a\%$$

In the formula: *a%* means alarm occurrence rate

You can refer to the following table for the file size in one hour per channel. (All the data listed below are for reference only.)

Bit Stream Size (max)	File Size	Bit Stream Size (max)	File Size
96 Kbps	42 MB	128 Kbps	56 MB
160 Kbps	70 MB	192 Kbps	84 MB
224 Kbps	98 MB	256 Kbps	112 MB

Appendix Table 2-1 HDD capacity calculation

Bit Stream Size (max)	File Size	Bit Stream Size (max)	File Size
320 Kbps	140 MB	384 Kbps	168 MB
448 Kbps	196 MB	512 Kbps	225 MB
640 Kbps	281 MB	768 Kbps	337 MB
896 Kbps	393 MB	1024 Kbps	450 MB
1280 Kbps	562 MB	1536 Kbps	675 MB
1792 Kbps	787 MB	2048 Kbps	900 MB

# Appendix 7 Earthing

# Appendix 7.1 What is the Surge

Surge is a short current or voltage change during a very short time. In the circuit, it lasts for microsecond. In a 220 V circuit, the 5KV or 10KV voltage change during a very short time (about microseconds) can be called a surge. The surge comes from two ways: external surge and internal surge.

- The external surge: The external surge mainly comes from the thunder lightning. Or it comes from the voltage change during the on/off operation in the electric power cable.
- The internal surge: The research finds 88% of the surge from the low voltage comes from the internal of the building such as the air conditioning, elevator, electric welding, air compressor, water pump, power button, duplicating machine and other device of inductive load.

The lightning surge is far above the load level the PC or the micro devices can support. In most cases, the surge can result in electric device chip damage, PC error code, accelerating the part aging, data loss and etc. Even when a small 20 horsepower inductive engine boots up or stops, the surge can reach 3000 V to 5000 V, which can adversely affect the electronic devices that use the same distribution box.

To protect the device, you need to evaluate its environment, the lightning affection degree objectively. Because surge has close relationship with the voltage amplitude, frequency, network structure, device voltage-resistance, protection level, ground and etc. The thunder proof work shall be a systematic project, emphasizing the all-round protection (including building, transmission cable, device, ground and etc.). There shall be comprehensive management and the measures shall be scientific, reliable, practical and economic. Considering the high voltage during the inductive thundering, the International Electrotechnical Commission (IEC) standard on the energy absorbing step by step theory and magnitude classification in the protection zone, you need to prepare multiple precaution levels.

You can use the lightning rod, lightning strap or the lightning net to reduce the damage to the building, personal injury or the property.

The lightning protection device can be divided into three types:

- Power lightning arrester: There are 220 V single-phrase lightning arrester and 380 V three-phrase lightning arrester (mainly in parallel connection, sometimes use series connection) You can parallel connect the power lightning arrester in the electric cable to reduce the short-time voltage change and release the surge current. From the BUS to the device, there are usually three levels so that system can reduce the voltage and release the current step by step to remove the thunderstorm energy and guarantee the device safety. You can select the replaceable module type, the terminal connection type and portable socket according to your requirement.
- Signal lightning arrester: This device is mainly used in the PC network, communication system. The connection type is serial connection. Once you connected the signal lightning arrestor with the signal port, it can cut the channel of the thunderstorm to the device, and on the other hand, it can discharge the current to the ground to guarantee the device proper work. The signal lightning arrester has many specifications, and widely used in many devices such as telephone, network, analog communication, digital communication, cable TV and satellite antenna. For all the input port, especially those from the outdoor, you need to install the signal lightning arrester.

• Antenna feed cable lightning arrester: It is suitable for antenna system of the transmitter or the device system to receive the wireless signal. It uses the serial connection too.

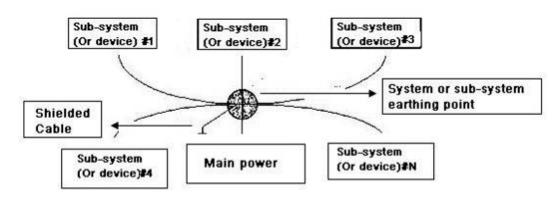

Note, when you select the lightning arrester, pay attention to the port type and the earthing reliability. In some important environment, you need to use special shielded cable. Do not parallel connect the thunder proof ground cable with the ground cable of the lightning rod. Make sure they are far enough and grounded respectively.

# Appendix 7.2 The Earthing Modes

We all know the earthing is the most complicated technology in the electromagnetism compatibility design since there is no systematic theory or module. The earthing has many modes, but the selection depends on the system structure and performance.

The following are some successfully experience from our past work.

• **One-point ground:** In the following figure you can see there is a one-point ground. This connection provides common point to allow signal to be transmitted in many circuits. If there is no common point, the error signal transmission occurred. In the one-point ground mode, each circuit is just grounded only and they are connected at the same point. Since there is only one common point, there is no circuit and so, there is no interference.

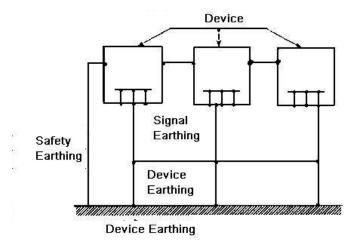

Appendix Figure 7-1 One-point ground

• Multiple-point ground: In the following figure, you can see the internal circuit uses the chassis as the common point. While at the same time, all devices chassis use the earthing as the common point. In this connection, the ground structure can provide the lower ground resistance because when there are multiple-point grounds; each ground cable is as short as possible. And the parallel cable connection can reduce the total conductance of the ground conductor. In the high-frequency circuit, you need to use the multiple-point ground mode and each cable needs to connect to the ground. The length shall be less than the 1/20 of the signal wavelength.

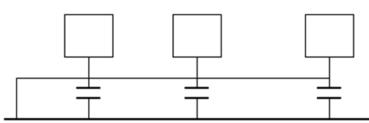

# Appendix Figure 7-2 Multiple-point ground

• Mixed ground: The mix ground consists of the feature of the one-point ground and multiplepoint ground. For example, the power in the system needs to use the one-point ground mode while the radio frequency signal requires the multiple-point ground. So, you can use the following figure to earth. For the direct current (DC), the capacitance is open circuit and the circuit is onepoint ground. For the radio frequency signal, the capacitance is conducive and the circuit adopts multiple-point ground.

#### Appendix Figure 7-3 Mixed ground

When connecting devices of huge size (the device physical dimension and connection cable is big comparing with the wave path of existed interference), then there is possibility of interference when the current goes through the chassis and cable. In this situation, the interference circuit path usually lies in the system ground circuit.

When considering the earthing, you need to think about two aspects: One is the system compatibility, and the other is the external interference coupling into the earth circuit, which results in system error. For the external interference is not regular, it is not easy to resolve.

# Appendix 7.3 Thunder Proof Ground Method in the Monitor System

- The monitor system shall have sound thunder proof earthing to guarantee personnel safety and device safety.
- The monitor system working ground resistance shall be less than 1  $\Omega$ .
- The thunder proof ground shall adopt the special ground cable from the monitor control room to the ground object. The ground cable adopts copper insulation cable or wire and its ground

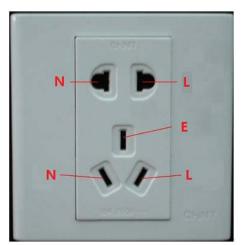

section shall be more than 20mm<sup>2</sup>.

- The ground cable of the monitor system cannot short circuit or mixed connected with the strong alternative current cable.
- For all the ground cables from the control room to the monitor system or ground cable of other monitor devices, use the copper resistance soft cable and its section shall be more than 4 mm<sup>2</sup>.
- The monitor system usually can adopt the one-point ground.
- Connect the ground end of 3-pin socket in the monitor system to the ground port of the system (protection ground cable)

# Appendix 7.4 The Shortcut Way to Check the Electric System by Digital Multimeter

For 220 VAC socket, from the top to the bottom, E (ground cable), N (neutral cable), L (live cable). Refer to the following figure.

Appendix Figure 7-4 Socket

There is a shortcut way to check whether these three cables connection are standard or not (not the accurate check).

# $\wedge$

In the following operations, the multimeter range shall be at 750 V.

# For E (earth cable)

Turn the digital multimeter to 750 VAC, use your one hand to hold the metal end, and then the other hand inserts the pen to the E port of the socket. See the following figure. If the multimeter shows 0, then you can see current earth cable connection is standard. If the value is more than 10, then you can know there is inductive current and the earth cable connection is not proper.

# Appendix Figure 7-5 Check earth cable connection

# For L (live cable)

Turn the digital multimeter to 750 VAC, use your one hand to hold the metal end, and then the other hand inserts the pen to the L port of the socket. See the following figure. If the multimeter shows 125, then you can see current live cable connection is standard. If the value is less than 60, then you can know current live cable connection is not proper or it is not the live cable at all.

Appendix Figure 7-6 Check live cable connection

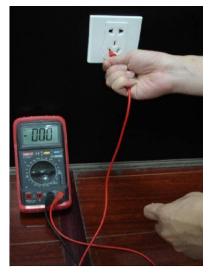

# For N (Neutral cable)

Turn the digital multimeter to 750 VAC, use your one hand to hold the metal end, and then the other hand inserts the pen to the N port of the socket. See the following figure. If the multimeter shows 0, then you can see current N cable connection is standard. If the value is more than 10, then you can see there is inductive current and the neutral cable connection is not proper. If the value is 120, then you can know that you have misconnected the neutral cable to the live cable.

# Appendix Figure 7-7 Check neutral cable connection

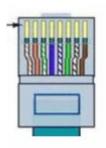

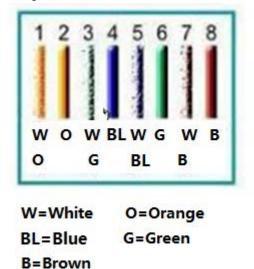

# Appendix 8 RJ45-RS232 Connection Cable Definition

Refer to the following figure for RJ-45 cable definition.

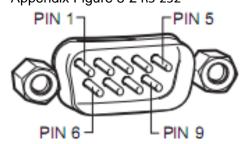

Appendix Figure 8-1 RJ-45

Refer to the following figure for RS-232 pin definition.

Appendix Figure 8-2 RS-232

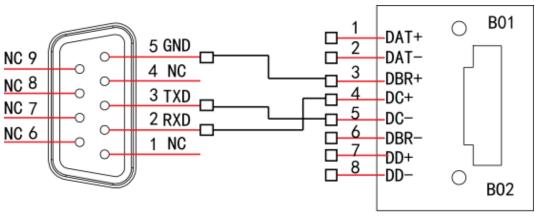

**Cross Connection** 

Refer to the following figure for connection information.

# RS232

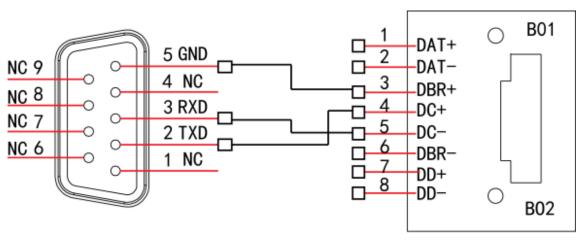

RJ45

Refer to the following table for detailed crossover cable connection information.

Appendix Table 8-1 Crossover cable connection				
RJ45 (T568B) RJ45 (Network cable) RS-232 Signal Description				
4	Blue	2	RXD	
5	White and blue	3	TXD	
3	White and green	5	GND	

# Straight Connection

# Refer to the following figure for straight cable connection information. Appendix Figure 8-4 Straight cable connection

RS232

RJ45

Refer to the following table for straight connection information.

RJ45 (T568B)	RJ45 (Network cable)	RS-232	Signal Description
4	Blue	3	RXD
5	White and blue	2	TXD
3	White and green	5	GND

# Appendix 9 Cybersecurity Recommendations

Cybersecurity is more than just a buzzword: it's something that pertains to every device that is connected to the internet. IP video surveillance is not immune to cyber risks, but taking basic steps toward protecting and strengthening networks and networked appliances will make them less susceptible to attacks. Below are some tips and recommendations on how to create a more secured security system.

# Mandatory actions to be taken for basic device network security:

# 1. Use Strong Passwords

Please refer to the following suggestions to set passwords:

- The length should not be less than 8 characters;
- Include at least two types of characters; character types include upper and lower case letters, numbers and symbols;
- Do not contain the account name or the account name in reverse order;
- Do not use continuous characters, such as 123, abc, etc.;
- Do not use overlapped characters, such as 111, aaa, etc.;
- 2. Update Firmware and Client Software in Time
  - According to the standard procedure in Tech-industry, we recommend to keep your device (such as NVR, DVR, IP camera, etc.) firmware up-to-date to ensure the system is equipped with the latest security patches and fixes. When the device is connected to the public network, it is recommended to enable the "auto-check for updates" function to obtain timely information of firmware updates released by the manufacturer.
  - We suggest that you download and use the latest version of client software.

# "Nice to have" recommendations to improve your device network security:

1. Physical Protection

We suggest that you perform physical protection to device, especially storage devices. For example, place the device in a special computer room and cabinet, and implement well-done access control permission and key management to prevent unauthorized personnel from carrying out physical contacts such as damaging hardware, unauthorized connection of removable device (such as USB flash disk, serial port), etc.

# 2. Change Passwords Regularly

We suggest that you change passwords regularly to reduce the risk of being guessed or cracked.

# 3. Set and Update Passwords Reset Information Timely

The device supports password reset function. Please set up related information for password reset in time, including the end user's mailbox and password protection questions. If the information changes, please modify it in time. When setting password protection questions, we recommend you not to use those that can be easily guessed.

# 4. Enable Account Lock

The account lock feature is enabled by default, and we recommend you to keep it on to guarantee the account security. If an attacker attempts to log in with the wrong password several times, the corresponding account and the source IP address will be locked.

# 5. Change Default HTTP and Other Service Ports

We suggest you to change default HTTP and other service ports into any set of numbers between 1024~65535, reducing the risk of outsiders being able to guess which ports you are using.

# 6. Enable HTTPS

We suggest you to enable HTTPS, so that you visit Web service through a secure communication channel.

# 7. MAC Address Binding

We recommend you to bind the IP and MAC address of the gateway to the device, thus reducing the risk of ARP spoofing.

# 8. Assign Accounts and Privileges Reasonably

According to business and management requirements, reasonably add users and assign a minimum set of permissions to them.

# 9. Disable Unnecessary Services and Choose Secure Modes

If not needed, it is recommended to turn off some services such as SNMP, SMTP, UPnP, etc., to reduce risks.

If necessary, it is highly recommended that you use safe modes, including but not limited to the following services:

- SNMP: Choose SNMP v3, and set up strong encryption passwords and authentication passwords.
- SMTP: Choose TLS to access mailbox server.
- FTP: Choose SFTP, and set up strong passwords.
- AP hotspot: Choose WPA2-PSK encryption mode, and set up strong passwords.

# 10. Audio and Video Encrypted Transmission

If your audio and video data contents are very important or sensitive, we recommend that you use encrypted transmission function, to reduce the risk of audio and video data being stolen during transmission.

Reminder: encrypted transmission will cause some loss in transmission efficiency.

# 11. Secure Auditing

- Check online users: we suggest that you check online users regularly to see if the device is logged in without authorization.
- Check device log: By viewing the logs, you can know the IP addresses that were used to log in to your devices and their key operations.

# 12. Network Log

Due to the limited storage capacity of the device, the stored log is limited. If you need to save the log for a long time, it is recommended that you enable the network log function to ensure that the critical logs are synchronized to the network log server for tracing.

# 13. Construct a Safe Network Environment

In order to better ensure the safety of device and reduce potential cyber risks, we recommend:

- Disable the port mapping function of the router to avoid direct access to the intranet devices from external network.
- The network should be partitioned and isolated according to the actual network needs. If there are no communication requirements between two sub networks, we recommend you to use VLAN, network GAP and other technologies to partition the network, so as to achieve the network isolation effect.

- Establish the 802.1x access authentication system to reduce the risk of unauthorized access to private networks.
- Enable IP/MAC address filtering function to limit the range of hosts allowed to access the device.

# ENABLING A SAFER SOCIETY AND SMARTER LIVING

# DIGITAL VIDEO RECORDER

Quick Start Guide

V1.0.3

# Welcome

Thank you for purchasing our Digital Video Recorder (DVR).

This Quick Start Guide (hereinafter referred to be "the Guide") will help you become familiar with our DVR in a short time. Please read the Guide carefully before starting using your DVR and properly keep it for future reference.

# Important Safeguards and Warnings

# **Operation Requirement**

- Do not place or install the Device in a place exposed to sunlight or near the heat source.
- Keep the Device away from dampness, dust or soot.
- Keep the Device installed horizontally on the stable place to prevent it from falling.
- Wall-mounting is not supported.
- Do not drop or splash liquid onto the Device, and make sure there is no object filled with liquid on the Device to prevent liquid from flowing into the Device.
- Install the Device in a well-ventilated place, and do not block the ventilation of the Device.
- Operate the device within the rated range of power input and output.
- Do not dissemble the Device.
- Transport, use and store the Device under the allowed humidity and temperature conditions.

# **Electrical Safety**

- Use the battery of specified manufacturer; otherwise there might result in explosion. When replacing battery, make sure the same type is used. Improper battery use might result in fire, explosion, or inflammation.
- Follow the instructions to dispose of the used battery.
- Use the recommended power cables in the region and conform to the rated power specification.
- Use the power adapter provided with the Device; otherwise, it might result in people injury and device damage.
- The power source shall conform to the requirement of the Safety Extra Low Voltage (SELV) standard, and supply power with rated voltage which conforms to Limited power Source requirement according to IEC60950-1. Please note that the power supply requirement is subject to the device label.
- Connect the device (I-type structure) to the power socket with protective earthing.
- The appliance coupler is a disconnection device. When using the coupler, keep the angle for easy operation.

# Safety Instructions

The following categorized signal words with defined meaning might appear in the Guide.

Signal Words	Meaning
	Indicates a potential risk which, if not avoided, could result in property damage, data loss, lower performance, or unpredictable result.
	Provides additional information as the emphasis and supplement to the text.

### **Privacy Protection Notice**

As the device user or data controller, you might collect personal data of others' such as face, fingerprints, car plate number, Email address, phone number, GPS and so on. You need to be in compliance with the local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures include but not limited to: providing clear and visible identification to inform data subject the existence of surveillance area and providing related contact.

#### About the Guide

- The Manual is for reference only. If there is inconsistency between the Guide and the actual product, the actual product shall prevail.
- We are not liable for any loss caused by the operations that do not comply with the Guide.
- The Guide would be updated according to the latest laws and regulations of related regions. For detailed information, see the paper User's Manual, CD-ROM, QR code or our official website. If there is inconsistency between paper User's Manual and the electronic version, the electronic version shall prevail.
- All the designs and software are subject to change without prior written notice. The product updates might cause some differences between the actual product and the Guide. Please contact the customer service for the latest program and supplementary documentation.
- There still might be deviation in technical data, functions and operations description, or errors in print. If there is any doubt or dispute, please refer to our final explanation.
- Upgrade the reader software or try other mainstream reader software if the Guide (in PDF format) cannot be opened.
- All trademarks, registered trademarks and the company names in the Guide are the properties of their respective owners.
- Please visit our website, contact the supplier or customer service if there is any problem occurred when using the device.
- If there is any uncertainty or controversy, please refer to our final explanation.

## 

The actual appearance or quantity might be different depending on the model you purchased.

## 1.1 Unpacking the Accessories

### **1.2 Checking the Components**

When you receive the DVR, please check against the following checking list. If any of the items are missing or damaged, contact the local retailer or after-sales engineer immediately.

Sequence	Checking	items	Requirement					
		Appearance	No obvious damage.					
1	Package	Packing materials	No broken or distorted positions that					
		T acking materials	could be caused by hit.					
			Not torn up.					
2	Labels	Labels on the device	NOTE Do not tear up or throw away the labels; otherwise the warranty services are not ensured. You need to provide the serial number of the product when calling the					
							after-sales service.	
							Appearance	No obvious damage.
3		Device	Data cables, power					
	cables, fan cables, and		No loose connection.					
	mainboard							

## 1.3 Installing Hard Disk Drive (HDD)

#### D NOTE

- Please use the recommended HDD from the manufacturer.
- Shut down the DVR and unplug the power cable before opening the cover to replace the HDD.

1. Remove the screws to take 2. Fix the screws on the HDD off the cover.

4. Turn the DVR to see the back side of it. Aim the screws of the HDD at the holes on the back of the DVR, and then fasten the screws.

but do not fasten them.

5. Use the HDD cable and power cable to connect HDD and mainboard.

3. Put the HDD onto the DVR.

6. Put back the cover and fasten the screws.

# 1.4 Booting up

Ensure the input voltage corresponds to the power requirement of the DVR.

Step 1 Connect the DVR to a display.

- <u>Step 2</u> Plug in the power cable to the DVR.
- Step 3 Press the power button to turn on the DVR. The power indicator glows. On the connected display, the live view screen is displayed.

# The Grand Tour for Rear Panel

The following figure shows the rear panel of model with 4 video input ports (as an example).

#### Table 2-1 Port description

No.	Port Name	No.	Port Name	No.	Port Name
1	Video input port	5	Network port	9	Power input port
2	Audio input port	6	RS485 communication port	10	Power button
3	Audio output port	7	USB port	11	Ground
4	HDMI port	8	VGA port	12	Power cable fastener

# **Local Configurations**

#### 

- The interfaces in the Guide are used for introducing the operations and only for reference. The actual product shall govern.
- For details about operations of the DVR, see User's Manual.
- To enter the Main Menu, right-click on the live view screen to display the shortcut menu, and then click **Main Menu** and login the system.

#### 3.1 Initializing DVR

When booting up for the first time, the **Device Initialization** interface is displayed, see Figure 3-1. You need to configure the password information for the **admin** (by default). If needed, you can also configure the unlock pattern and password protection mode (see Table 3-1).

- The new password can be set from 8 characters through 32 characters and contains at least two types from number, letter and special characters (excluding"", """, ";", ":" and "&"). Please enter a strong password according to the password strength bar indication.
- To secure your DVR, it is strongly recommended to properly keep the password for admin and modify it periodically.

Description

**Protection Mode** 

Password Protection Mode	Description		
Email Address	In the <b>Email Address</b> box, enter an email address for password reset. In case you forgot password, enter the security code that you will get from this reserved email address to reset the password of admin.		
Security Questions	Configure the security questions and answers. In case you forgot password, enter the answers to the questions can make you reset the password.		
NOTE NOTE			
If you want to configure the email or security questions function later or you want to change the configurations, select <b>Main Menu &gt; ACCOUNT &gt; USER</b> .			

# 3.2 Configuring Recording Storage Schedule

Select **Main Menu > STORAGE > SCHEDULE > Record**, the **Record** interface is displayed, see Figure 3-2.

The default setting is 24 hours recording for all channels. You can modify the settings if needed. Figure 3-2 Record storage configuration

## 3.3 Playing Recorded Video

Select **Main Menu > VIDEO**, the video search interface is displayed. See Figure 3-3. You can view, search, and play back the recorded video.

#### Figure 3-3 Recorded video

## 3.4 Configuring P2P Settings

You can add the DVR into your cell phone client or the platform to manage. For details, please refer to the P2P operation manual.

Make sure the DVR is connected into the Internet, and if yes, in the **Status** box of the P2P interface, it shows **Online**.

#### 3.4.1 Entering P2P Interface

<u>Step 1</u> Select **Main Menu > NETWORK > P2P**, the **P2P** interface is displayed. See Figure 3-4.

#### Figure 3-4 P2P interface

Step 2 Enable the P2P function.

<u>Step 3</u> Click **Apply**. You can start adding the DVR into Cell Phone Client or the platform.

#### 3.4.2 Adding DVR into Cell Phone Client

To use P2P function, take adding wired device into Cell Phone Client as an example.

- <u>Step 1</u> Use your cell phone to scan the QR code under **Cell Phone Client** to download the application.
- <u>Step 2</u> Open the application and tap **E**, the menu is displayed.
- <u>Step 3</u> Tap **Device Manager >** Add **Device**, the **Add Device** interface is displayed. See Figure 3-5.
- <u>Step 4</u> Tap **P2P**, enter a name for the DVR, the username and password, scan the QR code under **Device SN**, and then tap **Start Live Preview**. The DVR is added and displayed on the live view interface of the cell phone. See Figure 3-6.

# 3.5 Logout

On the top right of the Main Menu interface or any interface after you have entered the Main

Menu, click

- Select **Logout**, you will log out the DVR.
- Select **Reboot**, the DVR will be rebooted.
- Select Shutdown, the DVR will be turned off.

You can also press the power button on the DVR to turn it off.

# Web Login

Open the browser, enter the IP address of the DVR, and then press **Enter** key. The **Login in** dialog box is displayed. See Figure 4-1. Properly enter the user name and password to login the web. For details, see *User's Manual*.

Figure 4-1 Login

## 

- Device initialization is required at the first login.
- The default administrator account is **admin**. The password is the one that was configured during initializing settings. To security your account, it is recommended to keep the password properly and change it periodically.
- You can select the protocol type as **TCP**, **UDP**, or **MULTICAST** depending on the networking structure. The default is **TCP**.
- If you forgot the password, click Forgot Password to reset the password.
- When entering the **Live** interface for the first time, follow the onscreen instructions "Please install plugins first!" to install the plugins.

# HDD INSALLATION GUIDE
